2 Test Cycle Information

Tester:	**Automated**
Jira Ticket:	TEST2-88
Environment:	o2intelligence-v4-dev.metricell.com
Browser Details:	Google Chrome 156.0.8078.48
Date of Test:	29/10/2026
Limitations during Testing:	Blocked criterion(s): 2, 12. See the assessment below each criterion.
Overall review outcome:	Blocked
Browser URL(s) recorded after criteria:	https://o2intelligence-v4-dev.metricell.com/gis

3 Test Summary

Area of test	Pass (Y/N)	Fail (Y/N)	Blocked (Y/N)	Defect No
1. Given the MS Teams Call layer is active, when the user opens its display settings, then the configured map-colouring choices and controls for detailed routes, linked sites and linked cells are visible.	N	Y	N	1
2. Given the MS Teams Call layer is active and a configured colouring choice is selected, when the map updates, then MS Teams Call result points and the legend display the selected configured colouring and its corresponding legend section.	N	N	Y	0
3. Given the MS Teams Call layer is active, when the user turns detailed routes on and the map refreshes, then detailed route geometry for the active MS Teams Call results is visible.	Y	N	N	0
4. Given the MS Teams Call layer is active and detailed routes are visible, when the user turns detailed routes off and the map refreshes, then that detailed route geometry is hidden.	Y	N	N	0
5. Given the MS Teams Call layer is active and the map is below the configured zoom level for linked sites, when display settings are open, then the linked-site control is unavailable and indicates that the user must zoom in.	Y	N	N	0
6. Given the MS Teams Call layer is active and the map is at or above the configured zoom level for linked sites, when the user turns linked sites on and the map refreshes, then linked-site overlays for the active MS Teams Call results are visible.	Y	N	N	0
7. Given linked-site overlays are visible at a supported zoom level, when the user turns linked sites off and the map refreshes, then those linked-site overlays are hidden.	Y	N	N	0
8. Given linked sites are enabled and the map is at a zoom level that supports linked cells, when display settings are open, then the linked-cell control is available.	Y	N	N	0
9. Given linked sites are disabled or the map is below the zoom level that supports linked cells, when display settings are open, then the linked-cell control is unavailable.	Y	N	N	0
10. Given linked sites are enabled and the map is at a zoom level that supports linked cells, when the user turns linked cells on and the map refreshes, then linked-cell overlays are visible.	Y	N	N	0
11. Given linked-cell overlays are visible, when the user turns linked cells off and the map refreshes, then those linked-cell overlays are hidden.	Y	N	N	0
12. Given any MS Teams Call display setting is changed, when the map refreshes, then the setting is applied only to the active MS Teams Call layer and other visible map layers, standard map filters and legend point-filtering state retain their prior visible states.	N	N	Y	0

4 Test Cases

Each test maps to a criterion and decisive browser evidence. Inconclusive results are reported as Failed.

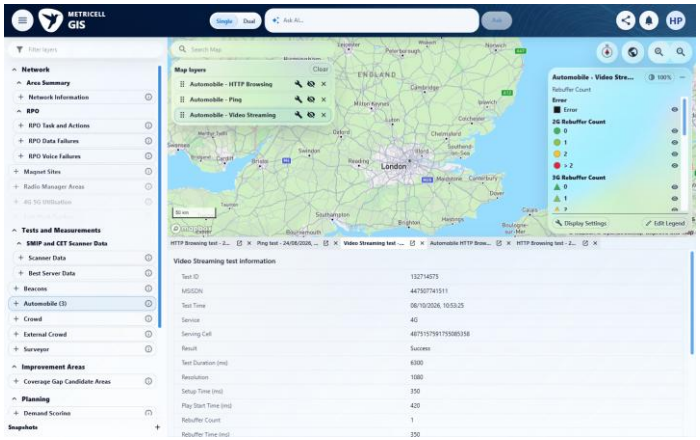

4.1 Tests

Preconditions:	V4 access and ticket conditions.	***Associated Requirements:***	Ticket criteria below.	Automation Notes:	Screenshots below each criterion; full log retained locally.

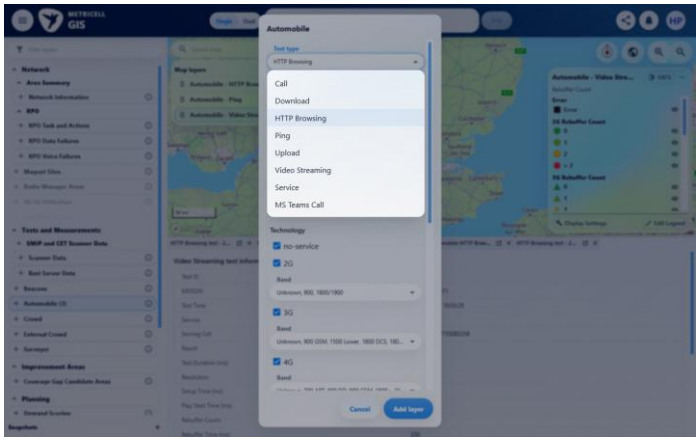

ID / Criterion	Criteria Tested	Expected Result	Actual Result / Evidence Path	Outcome
1.0.0	Given the MS Teams Call layer is active, when the user opens its display settings, then the configured map-colouring choices and controls for detailed routes, linked sites and linked cells are visible.	Given the MS Teams Call layer is active, when the user opens its display settings, then the configured map-colouring choices and controls for detailed routes, linked sites and linked cells are visible.	criterion-1-automobile-types.png and criterion-1-automobile-config.png establish Automobile > MS Teams Call; the recorded GET /api/platform/automobile/ms-teams-call/points matches that layer. criterion-1-final.png shows the complete Display Settings popover with detailed-route, linked-site and linked-cell controls, but no configured map-colouring choice. This directly contradicts the required colouring control. Evidence: E01, E02, E03, E04, E05	Failed

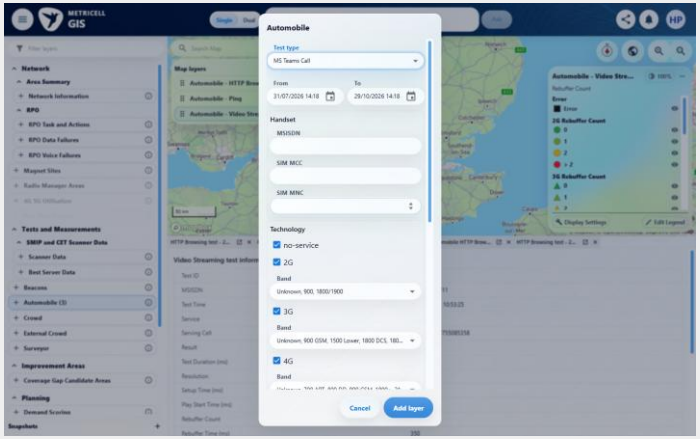

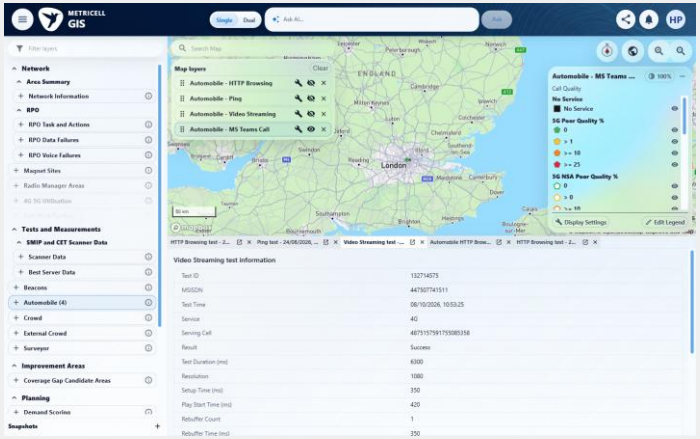

Criterion 1 evidence: Given the MS Teams Call layer is active, when the user opens its display settings, then the configured map-colouring choices and controls for detailed routes, linked sites and linked cells are visible.
Browser URL recorded after criterion: https://o2intelligence-v4-dev.metricell.com/gis

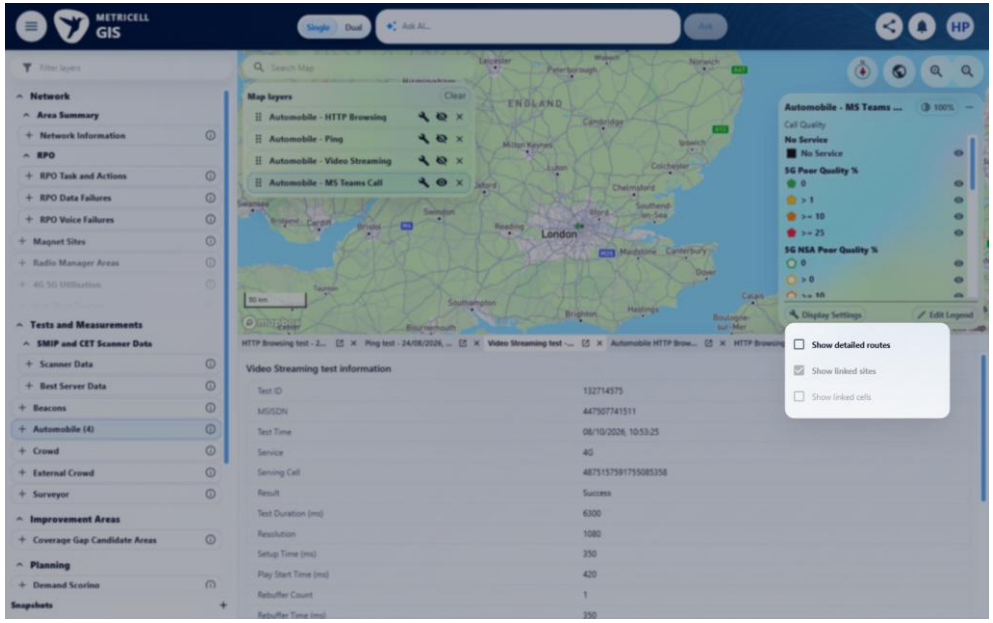

E01 - Gis baseline (criterion-1-gis-baseline.png)

E02 - Automobile types (criterion-1-automobile-types.png)

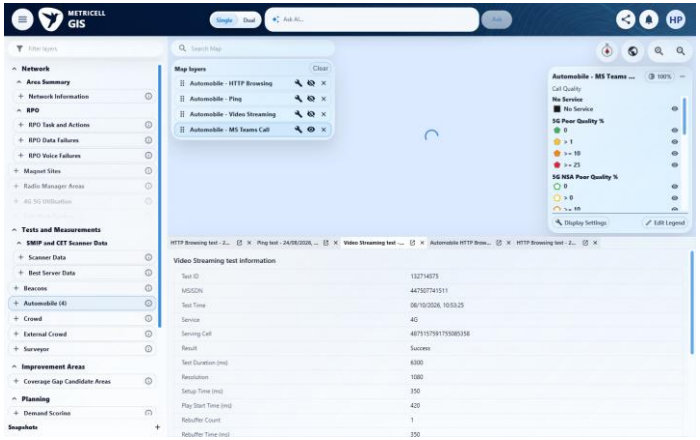

ID / Criterion	Criteria Tested	Expected Result	Actual Result / Evidence Path	Outcome
Criterion 1 continued: Given the MS Teams Call layer is active, when the user opens its display settings, then the configured map-colouring choices and controls for detailed routes, linked sites and linked cells are visible. **Browser URL recorded after criterion: https://o2intelligence-v4-dev.metricell.com/gis** **E03 - Automobile config (criterion-1-automobile-config.png)**  				
			E04 - Active layer (criterion-1-active-layer.png)  	

ID / Criterion	Criteria Tested	Expected Result	Actual Result / Evidence Path	Outcome
Criterion 1 continued: Given the MS Teams Call layer is active, when the user opens its display settings, then the configured map-colouring choices and controls for detailed routes, linked sites and linked cells are visible. **Browser URL recorded after criterion: https://o2intelligence-v4-dev.metricell.com/gis** **E05 - Final (criterion-1-final.png)** 				

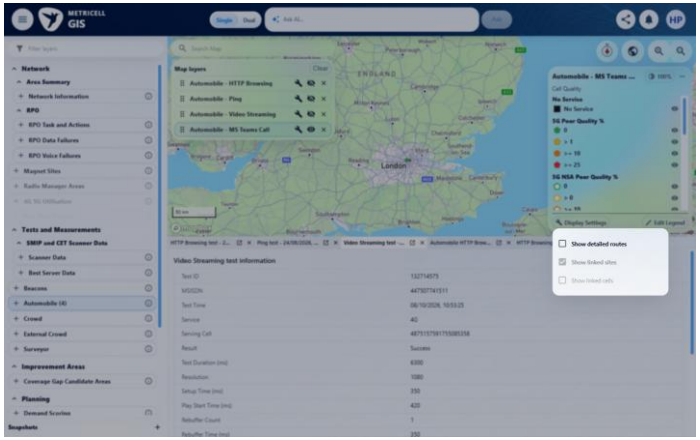

ID / Criterion	Criteria Tested	Expected Result	Actual Result / Evidence Path	Outcome
2.0.0	Given the MS Teams Call layer is active and a configured colouring choice is selected, when the map updates, then MS Teams Call result points and the legend display the selected configured colouring and its corresponding legend section.	Given the MS Teams Call layer is active and a configured colouring choice is selected, when the map updates, then MS Teams Call result points and the legend display the selected configured colouring and its corresponding legend section.	criterion-2-before-display.png and criterion-2-final.png show the active MS Teams Call legend and the three-checkbox Display Settings popover. The configured colouring selector is absent, preventing the required selection and point/legend comparison; existing Call Quality categories alone do not establish configuration-driven colouring. Evidence: E06, E07	Blocked

Criterion 2 evidence: Given the MS Teams Call layer is active and a configured colouring choice is selected, when the map updates, then MS Teams Call result points and the legend display the selected configured colouring and its corresponding legend section.
Browser URL recorded after criterion: https://o2intelligence-v4-dev.metricell.com/gis

E06 - Before display (criterion-2-before-display.png)

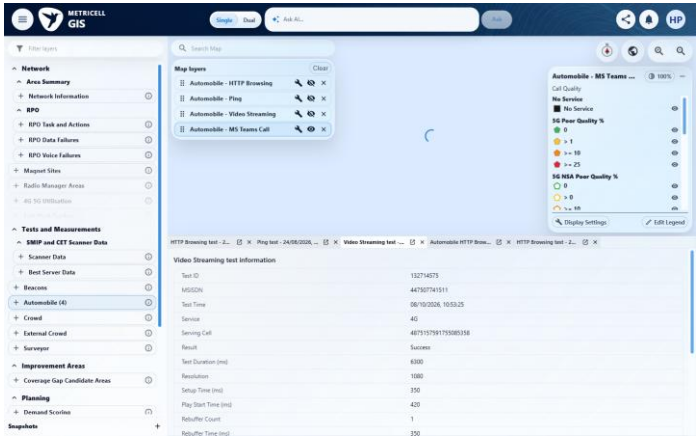

E07 - Final (criterion-2-final.png)

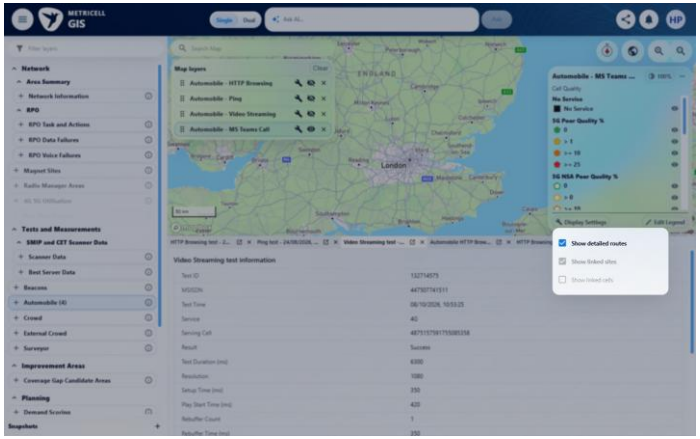

ID / Criterion	Criteria Tested	Expected Result	Actual Result / Evidence Path	Outcome
3.0.0	Given the MS Teams Call layer is active, when the user turns detailed routes on and the map refreshes, then detailed route geometry for the active MS Teams Call results is visible.	Given the MS Teams Call layer is active, when the user turns detailed routes on and the map refreshes, then detailed route geometry for the active MS Teams Call results is visible.	At the same bounded Galgate/Hampson Green map scope, criterion-3-narrow-before-on.png has no detailed route and criterion-3-final.png shows the dense green M6 result route after enabling it. criterion-3-checked.png, captured after final, confirms Show detailed routes checked and the route visible. The recorded fullRoute=true request is for Automobile MS Teams Call. This proves the supplied route scope, without asserting dataset completeness. Evidence: E08, E09, E10, E11, E12, E13, E14, E15, E16	Passed

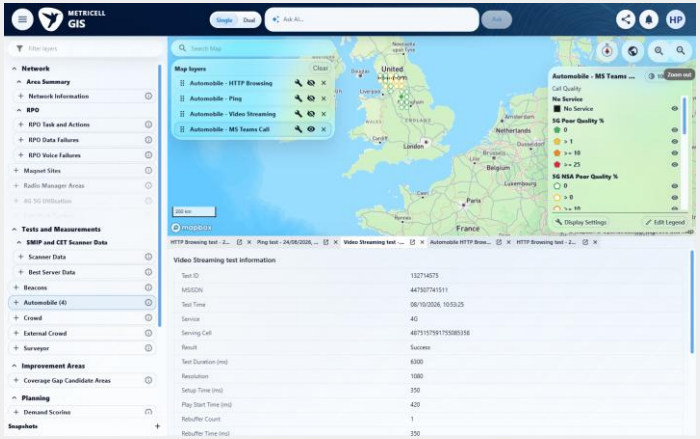

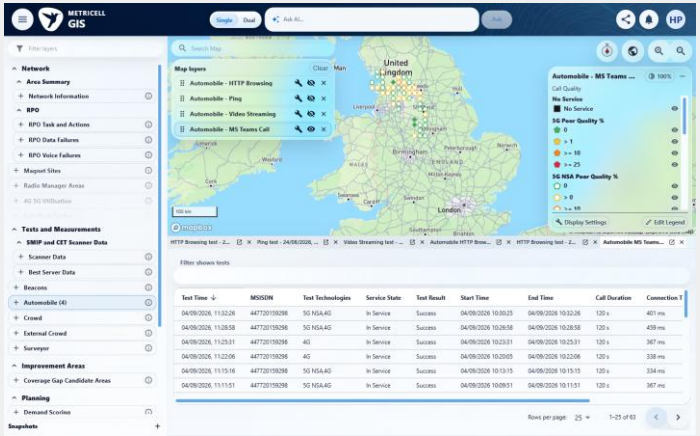

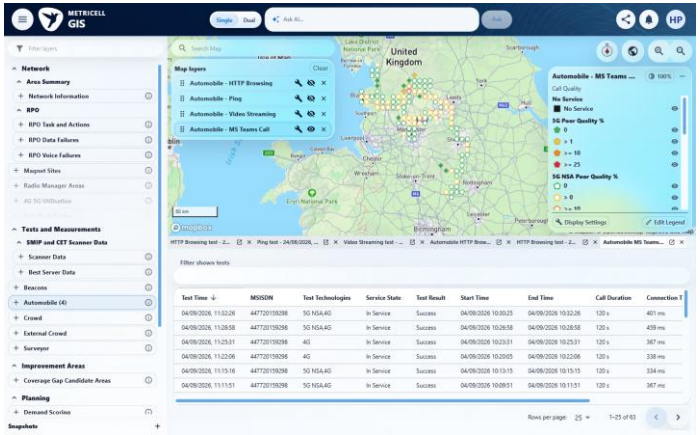

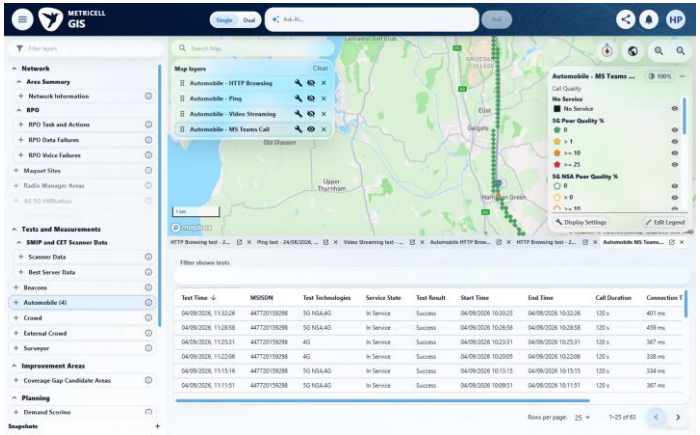

Criterion 3 evidence: Given the MS Teams Call layer is active, when the user turns detailed routes on and the map refreshes, then detailed route geometry for the active MS Teams Call results is visible.
Browser URL recorded after criterion: https://o2intelligence-v4-dev.metricell.com/gis

E08 - Before routes (criterion-3-before-routes.png)

E09 - Routes on (criterion-3-routes-on.png)

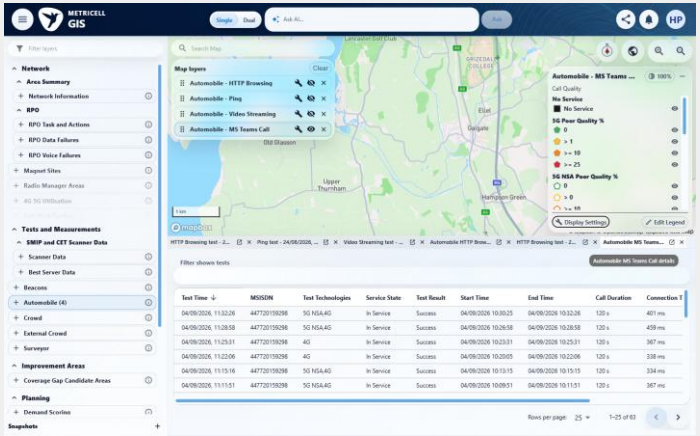

ID / Criterion	Criteria Tested	Expected Result	Actual Result / Evidence Path	Outcome
Criterion 3 continued: Given the MS Teams Call layer is active, when the user turns detailed routes on and the map refreshes, then detailed route geometry for the active MS Teams Call results is visible. Browser URL recorded after criterion: https://o2intelligence-v4-dev.metricell.com/gis **E10 - Wider scope (criterion-3-wider-scope.png)** 			**E11 - Populated area (criterion-3-populated-area.png)** 	
Criterion 3 continued: Given the MS Teams Call layer is active, when the user turns detailed routes on and the map refreshes, then detailed route geometry for the active MS Teams Call results is visible. Browser URL recorded after criterion: https://o2intelligence-v4-dev.metricell.com/gis **E12 - Route search (criterion-3-route-search.png)** 			**E13 - Narrow route scope (criterion-3-narrow-route-scope.png)** 	

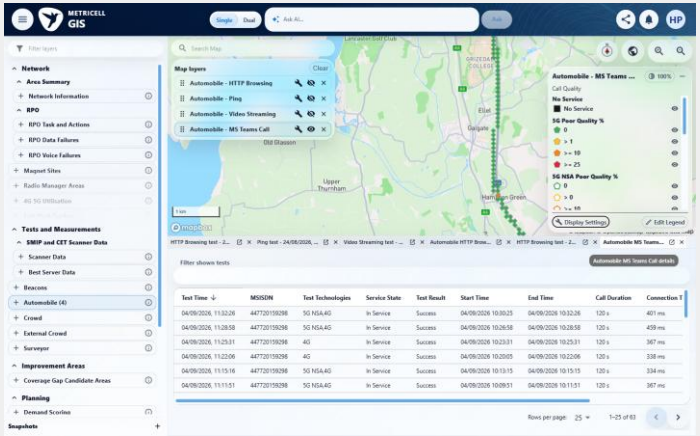

ID / Criterion	Criteria Tested	Expected Result	Actual Result / Evidence Path	Outcome

Criterion 3 continued: Given the MS Teams Call layer is active, when the user turns detailed routes on and the map refreshes, then detailed route geometry for the active MS Teams Call results is visible.
Browser URL recorded after criterion: https://o2intelligence-v4-dev.metricell.com/gis

E14 - Narrow before on (criterion-3-narrow-before-on.png)

E15 - Final (criterion-3-final.png)

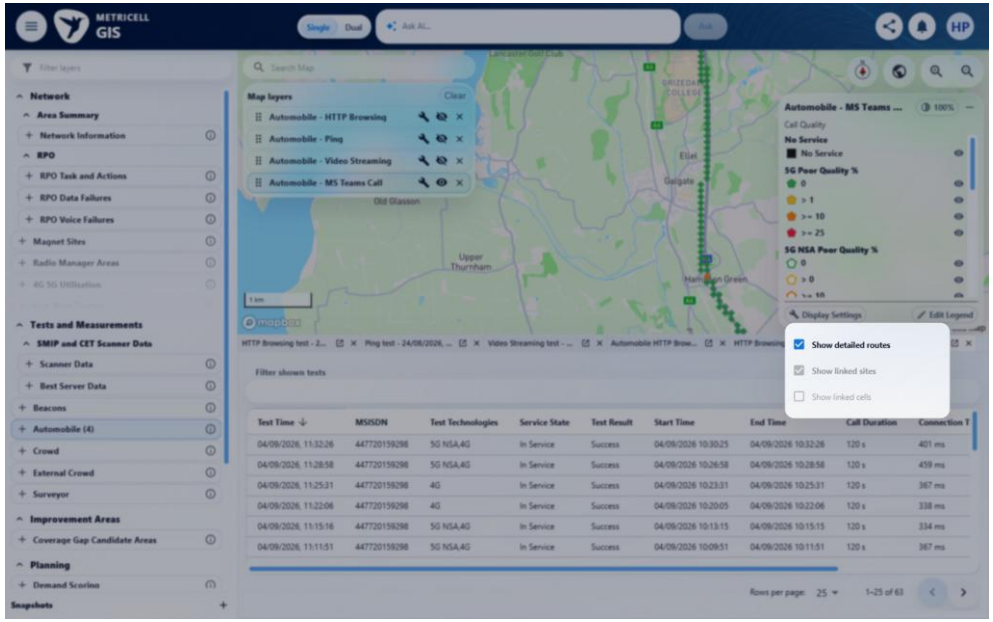

E14 detail enlargement - full screenshot above

E15 detail enlargement - full screenshot above

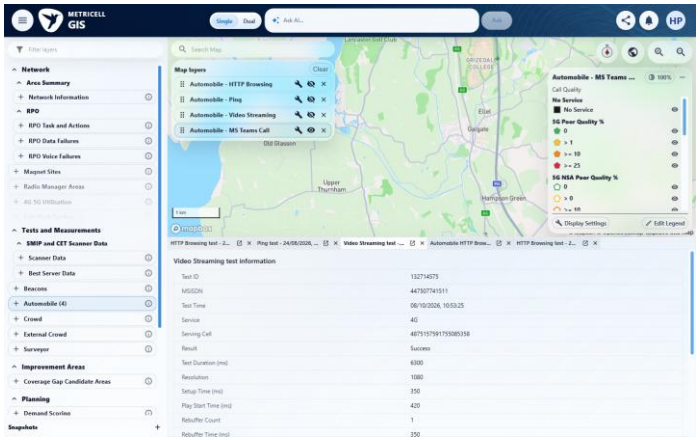

ID / Criterion	Criteria Tested	Expected Result	Actual Result / Evidence Path	Outcome
Criterion 3 continued: Given the MS Teams Call layer is active, when the user turns detailed routes on and the map refreshes, then detailed route geometry for the active MS Teams Call results is visible. **Browser URL recorded after criterion: https://o2intelligence-v4-dev.metricell.com/gis** **E16 - Checked (criterion-3-checked.png)**				

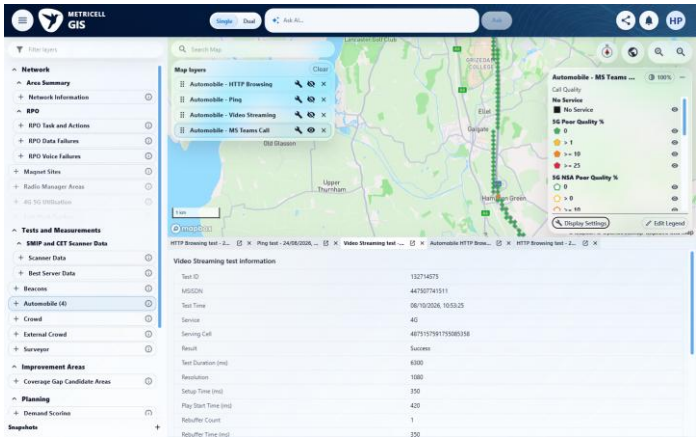

ID / Criterion	Criteria Tested	Expected Result	Actual Result / Evidence Path	Outcome
4.0.0	Given the MS Teams Call layer is active and detailed routes are visible, when the user turns detailed routes off and the map refreshes, then that detailed route geometry is hidden.	Given the MS Teams Call layer is active and detailed routes are visible, when the user turns detailed routes off and the map refreshes, then that detailed route geometry is hidden.	criterion-4-before-off.png shows the MS Teams Call green route along the M6; criterion-4-final.png shows it removed at the matching map extent after the recorded route-off action. The other three layers remain hidden. criterion-4-baseline.png alone was not the decisive routes-on state. Evidence: E17, E18, E19	Passed

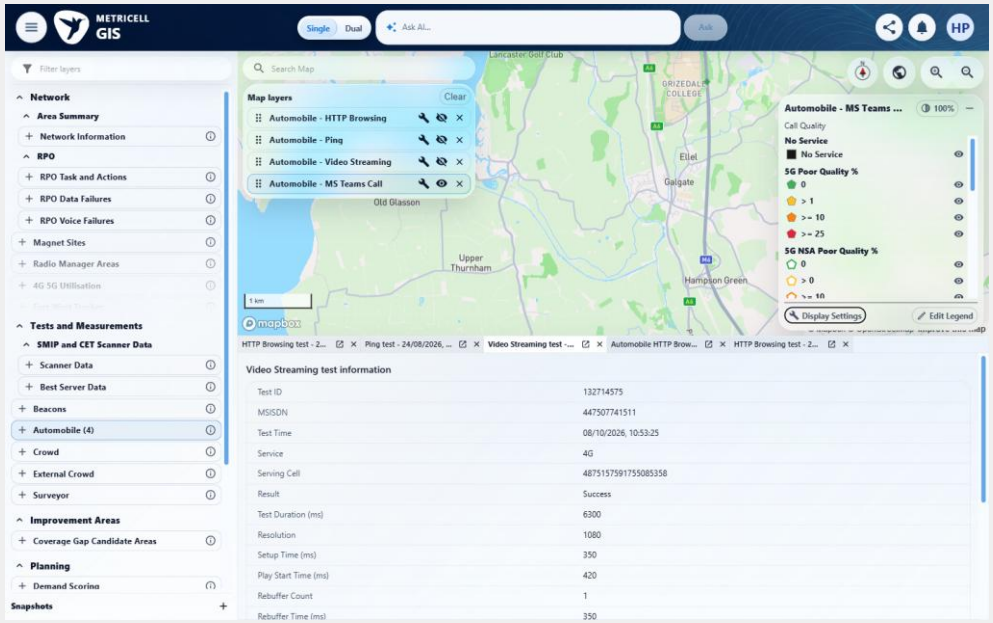

Criterion 4 evidence: Given the MS Teams Call layer is active and detailed routes are visible, when the user turns detailed routes off and the map refreshes, then that detailed route geometry is hidden.
Browser URL recorded after criterion: https://o2intelligence-v4-dev.metricell.com/gis

E17 - Baseline (criterion-4-baseline.png)

E18 - Before off (criterion-4-before-off.png)

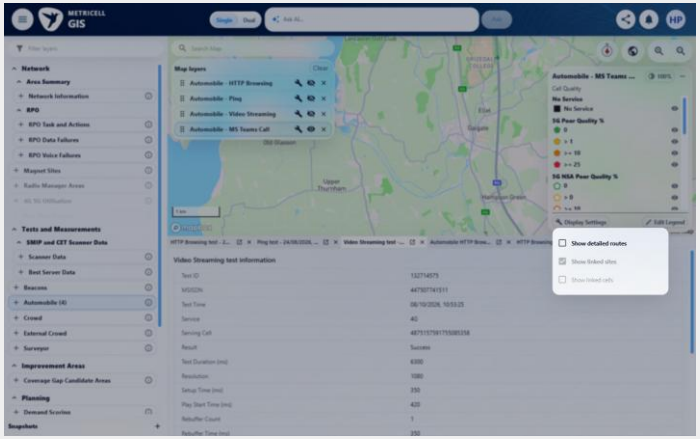

ID / Criterion	Criteria Tested	Expected Result	Actual Result / Evidence Path	Outcome
Criterion 4 continued: Given the MS Teams Call layer is active and detailed routes are visible, when the user turns detailed routes off and the map refreshes, then that detailed route geometry is hidden. **Browser URL recorded after criterion: https://o2intelligence-v4-dev.metricell.com/gis** **E19 - Final (criterion-4-final.png)** 				

ID / Criterion	Criteria Tested	Expected Result	Actual Result / Evidence Path	Outcome
5.0.0	Given the MS Teams Call layer is active and the map is below the configured zoom level for linked sites, when display settings are open, then the linked-site control is unavailable and indicates that the user must zoom in.	Given the MS Teams Call layer is active and the map is below the configured zoom level for linked sites, when display settings are open, then the linked-site control is unavailable and indicates that the user must zoom in.	criterion-5-before-activation.png shows the grey checked Show linked sites control at the recorded zoom 12.16. Following the recorded normal pointer activation at its visible label (after the locator refused activation), criterion-5-final.png retains the same checked unavailable control, map and detail state and displays 'Zoom in to level 13 to show linked sites.' The native disabled checkbox has no exposed keyboard activation path; the pass rests on the recorded pointer attempt and before/after captures, not the refusal or styling alone. Evidence: E20, E21	Passed

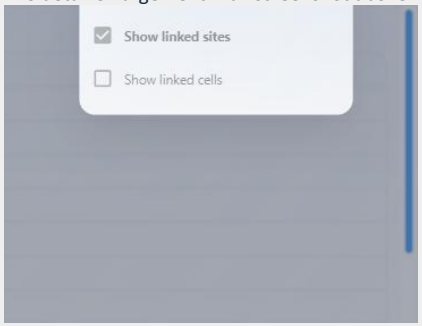

ID / Criterion	Criteria Tested	Expected Result	Actual Result / Evidence Path	Outcome

Criterion 5 evidence: Given the MS Teams Call layer is active and the map is below the configured zoom level for linked sites, when display settings are open, then the linked-site control is unavailable and indicates that the user must zoom in.
Browser URL recorded after criterion: https://o2intelligence-v4-dev.metricell.com/gis

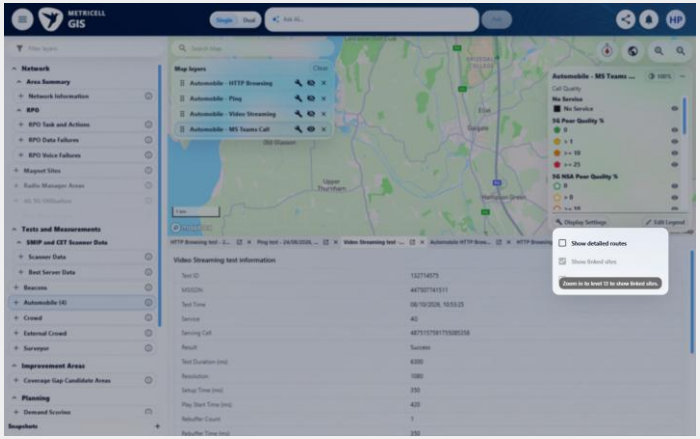

E20 - Before activation (criterion-5-before-activation.png)

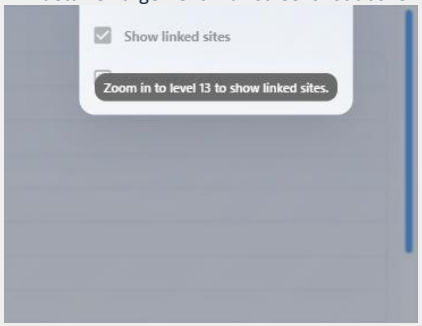

E20 detail enlargement - full screenshot above

E21 - Final (criterion-5-final.png)

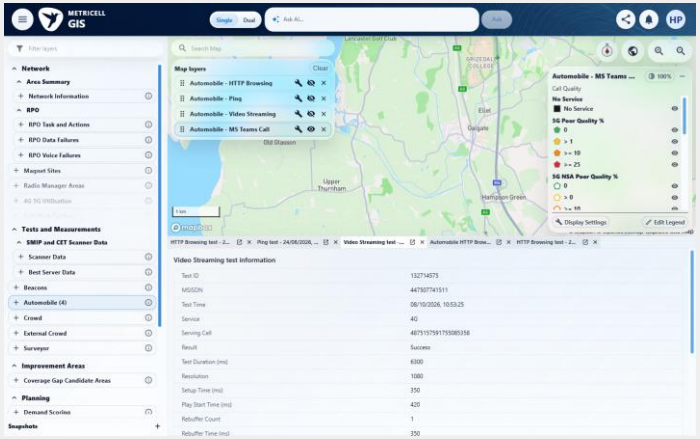

E21 detail enlargement - full screenshot above

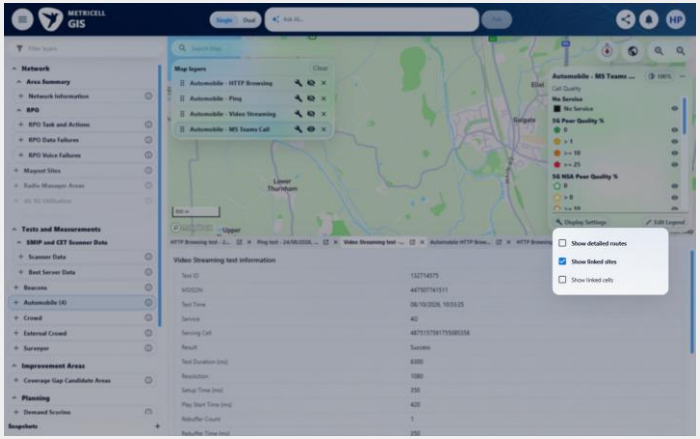

ID / Criterion	Criteria Tested	Expected Result	Actual Result / Evidence Path	Outcome
6.0.0	Given the MS Teams Call layer is active and the map is at or above the configured zoom level for linked sites, when the user turns linked sites on and the map refreshes, then linked-site overlays for the active MS Teams Call results are visible.	Given the MS Teams Call layer is active and the map is at or above the configured zoom level for linked sites, when the user turns linked sites on and the map refreshes, then linked-site overlays for the active MS Teams Call results are visible.	criterion-6-supported-controls.png shows linked sites checked and cells available at the recorded supported zoom 13.16. criterion-6-recentered-before-on.png and criterion-6-final.png show the matching Galgate map before/after enabling sites: cyan connection overlays appear while the green MS Teams Call route remains. These are the decisive settled comparison after the earlier recentering. Evidence: E22, E23, E24, E25, E26, E27	Passed

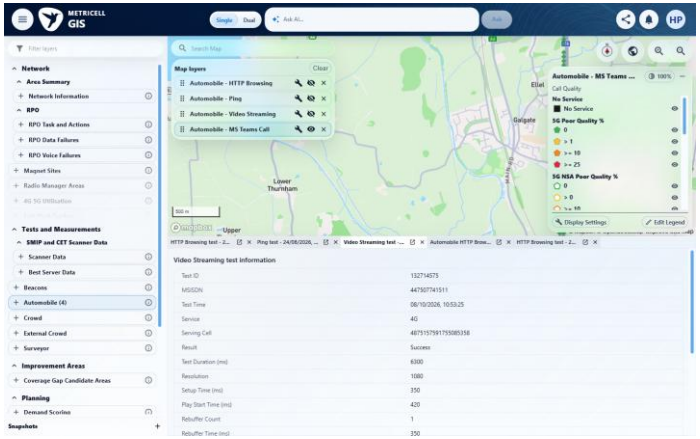

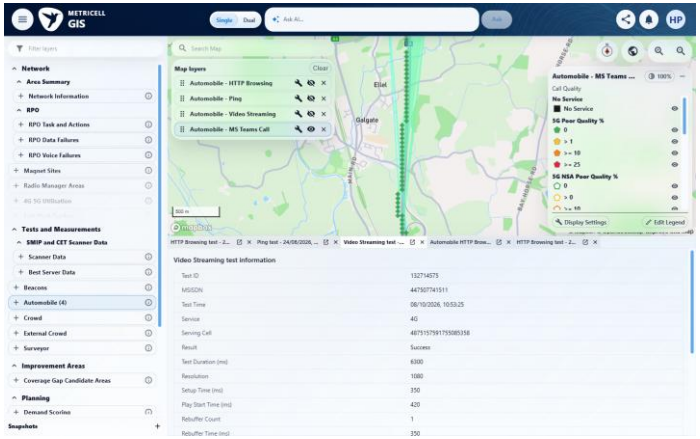

Criterion 6 evidence: Given the MS Teams Call layer is active and the map is at or above the configured zoom level for linked sites, when the user turns linked sites on and the map refreshes, then linked-site overlays for the active MS Teams Call results are visible.
Browser URL recorded after criterion: https://o2intelligence-v4-dev.metricell.com/gis

E22 - Before zoom (criterion-6-before-zoom.png)

E23 - Supported controls (criterion-6-supported-controls.png)

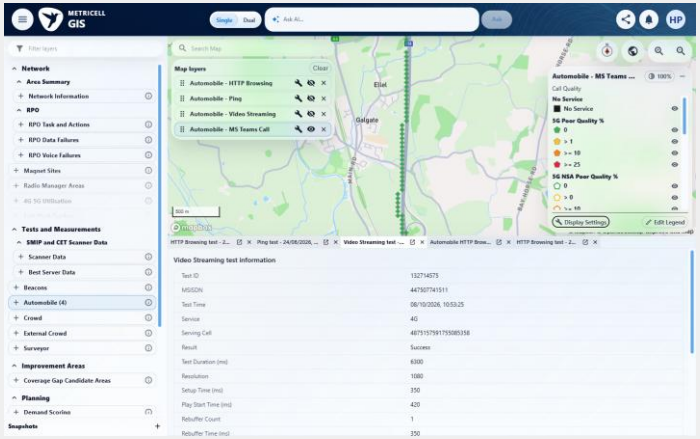

ID / Criterion	Criteria Tested	Expected Result	Actual Result / Evidence Path	Outcome
Criterion 6 continued: Given the MS Teams Call layer is active and the map is at or above the configured zoom level for linked sites, when the user turns linked sites on and the map refreshes, then linked-site overlays for the active MS Teams Call results are visible. **Browser URL recorded after criterion: https://o2intelligence-v4-dev.metricell.com/gis** **E24 - Before sites on (criterion-6-before-sites-on.png)**  **E25 - Recentered (criterion-6-recentered.png)** 				

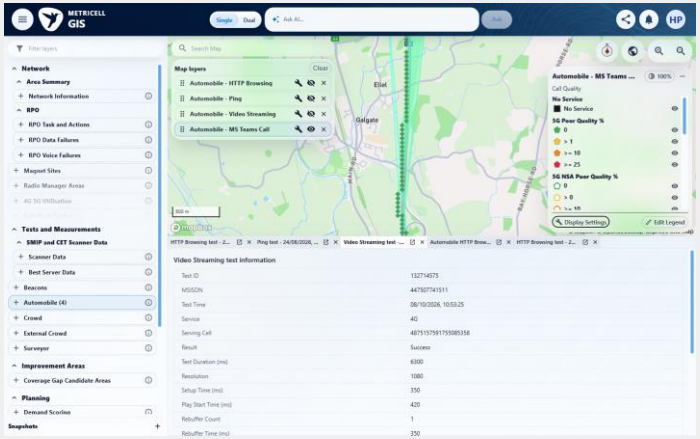

ID / Criterion	Criteria Tested	Expected Result	Actual Result / Evidence Path	Outcome

Criterion 6 continued: Given the MS Teams Call layer is active and the map is at or above the configured zoom level for linked sites, when the user turns linked sites on and the map refreshes, then linked-site overlays for the active MS Teams Call results are visible.
Browser URL recorded after criterion: https://o2intelligence-v4-dev.metricell.com/gis

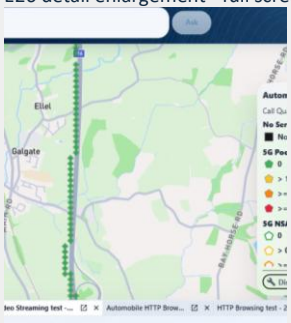

E26 - Recentered before on (criterion-6-recentered-before-on.png)

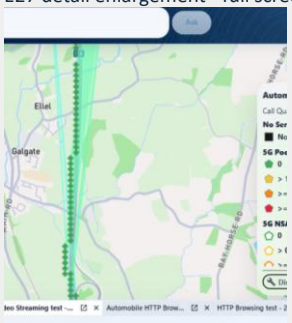

E27 - Final (criterion-6-final.png)

E26 detail enlargement - full screenshot above

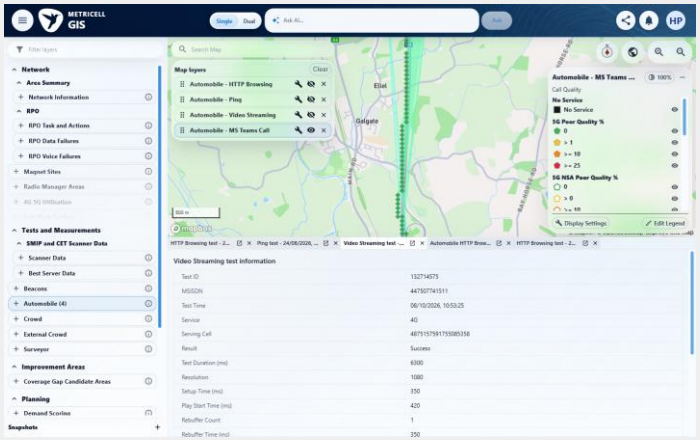

E27 detail enlargement - full screenshot above

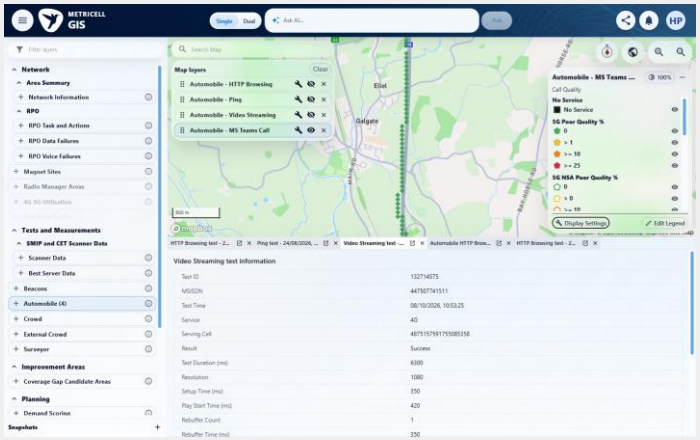

ID / Criterion	Criteria Tested	Expected Result	Actual Result / Evidence Path	Outcome
7.0.0	Given linked-site overlays are visible at a supported zoom level, when the user turns linked sites off and the map refreshes, then those linked-site overlays are hidden.	Given linked-site overlays are visible at a supported zoom level, when the user turns linked sites off and the map refreshes, then those linked-site overlays are hidden.	criterion-7-before-off.png shows cyan linked-site connection overlays alongside the green MS Teams Call route; criterion-7-final.png shows those cyan overlays removed at the same supported-zoom extent after the recorded sites-off action, retaining the green route. Evidence: E28, E26	Passed

Criterion 7 evidence: Given linked-site overlays are visible at a supported zoom level, when the user turns linked sites off and the map refreshes, then those linked-site overlays are hidden.
Browser URL recorded after criterion: https://o2intelligence-v4-dev.metricell.com/gis

E28 - Before off (criterion-7-before-off.png)

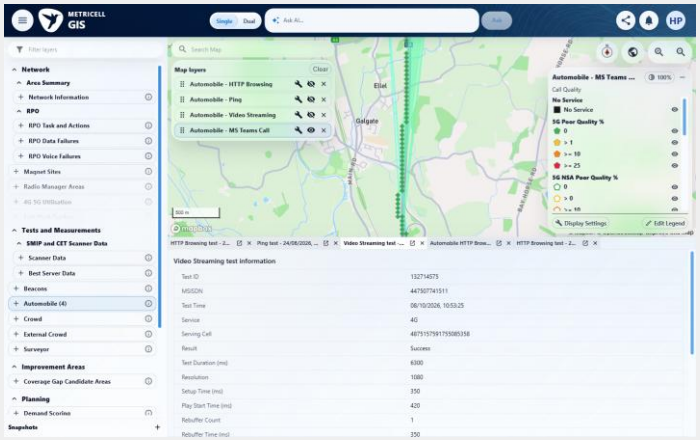

E26 - Final (criterion-7-final.png)

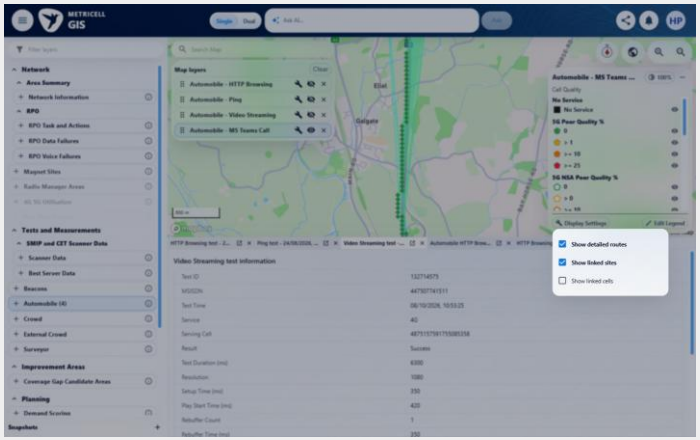

ID / Criterion	Criteria Tested	Expected Result	Actual Result / Evidence Path	Outcome
8.0.0	Given linked sites are enabled and the map is at a zoom level that supports linked cells, when display settings are open, then the linked-cell control is available.	Given linked sites are enabled and the map is at a zoom level that supports linked cells, when display settings are open, then the linked-cell control is available.	criterion-8-final.png shows Show linked sites checked and the Show linked cells control in its available, unchecked state at the recorded zoom 13.16; the active Automobile MS Teams Call layer and cyan linked-site connections are visible. This criterion concerns availability, not successful cell rendering. Evidence: E28, E29	Passed

Criterion 8 evidence: Given linked sites are enabled and the map is at a zoom level that supports linked cells, when display settings are open, then the linked-cell control is available.
Browser URL recorded after criterion: https://o2intelligence-v4-dev.metricell.com/gis

E28 - Before display (criterion-8-before-display.png)

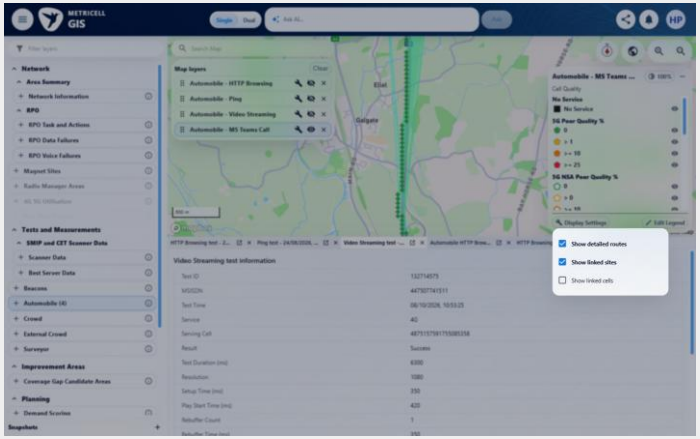

E29 - Final (criterion-8-final.png)

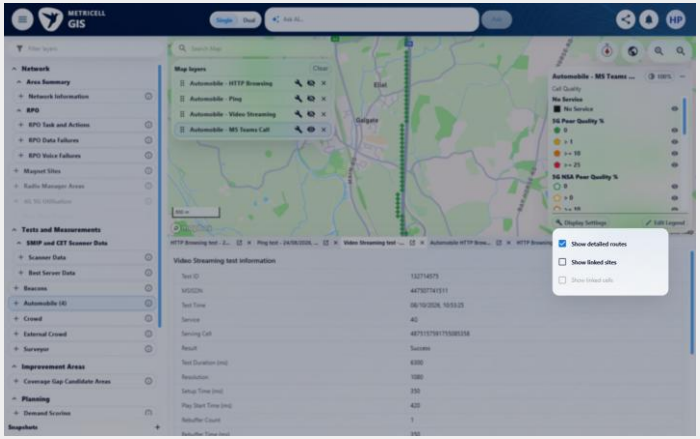

ID / Criterion	Criteria Tested	Expected Result	Actual Result / Evidence Path	Outcome
9.0.0	Given linked sites are disabled or the map is below the zoom level that supports linked cells, when display settings are open, then the linked-cell control is unavailable.	Given linked sites are disabled or the map is below the zoom level that supports linked cells, when display settings are open, then the linked-cell control is unavailable.	Both required gating branches are evidenced. criterion-9-sites-off-before-cell-click.png to criterion-9-sites-off-after-cell-click.png show sites unchecked and cells remaining unchecked/unavailable after recorded normal pointer activation. criterion-9-low-zoom-before-cell-click.png to criterion-9-final.png show sites checked at recorded zoom 12.16 and cells remaining unchecked/unavailable after the second normal activation, with the level-13 tooltip. Map and detail state remain unchanged within each pair. The native disabled checkbox has no exposed keyboard activation path. Evidence: E30, E31, E32, E33, E34	Passed

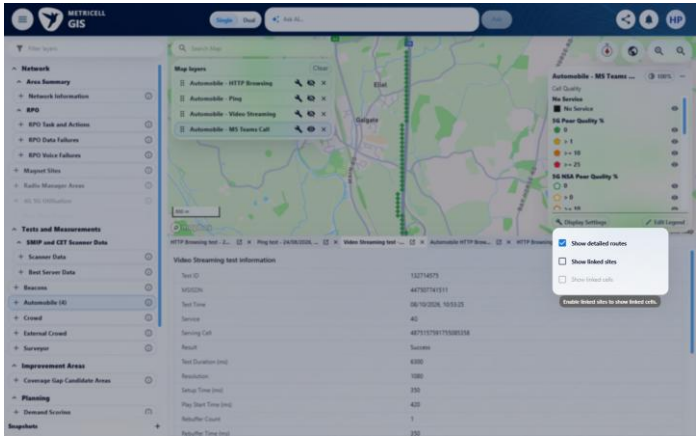

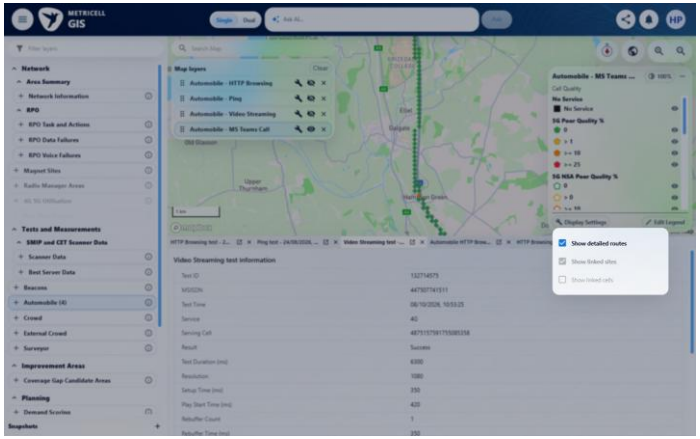

Criterion 9 evidence: Given linked sites are disabled or the map is below the zoom level that supports linked cells, when display settings are open, then the linked-cell control is unavailable.
Browser URL recorded after criterion: https://o2intelligence-v4-dev.metricell.com/gis

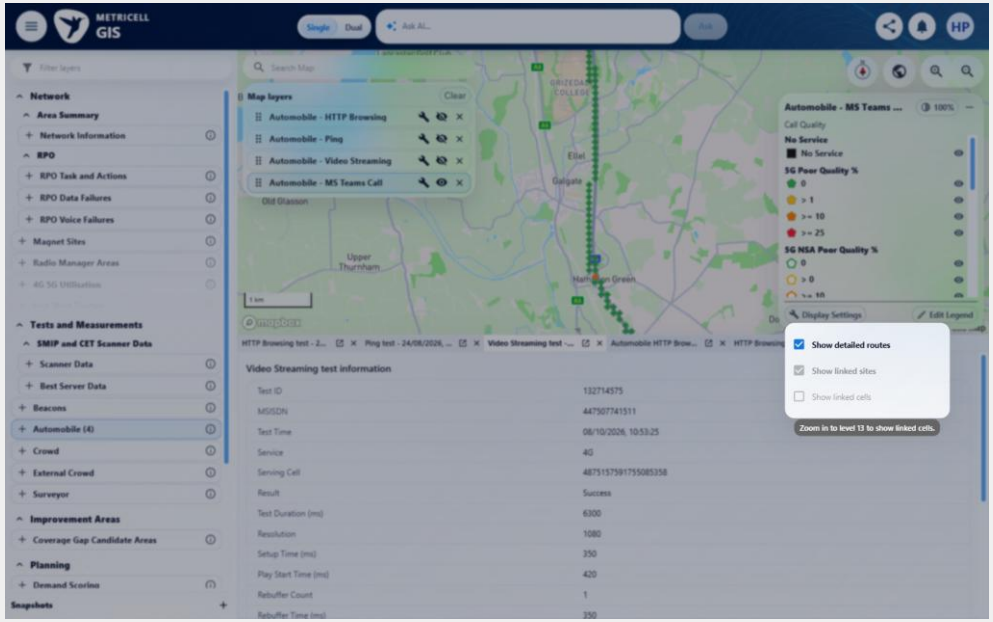

E30 - Before sites off (criterion-9-before-sites-off.png)

E31 - Sites off before cell click (criterion-9-sites-off-before-cell-click.png)

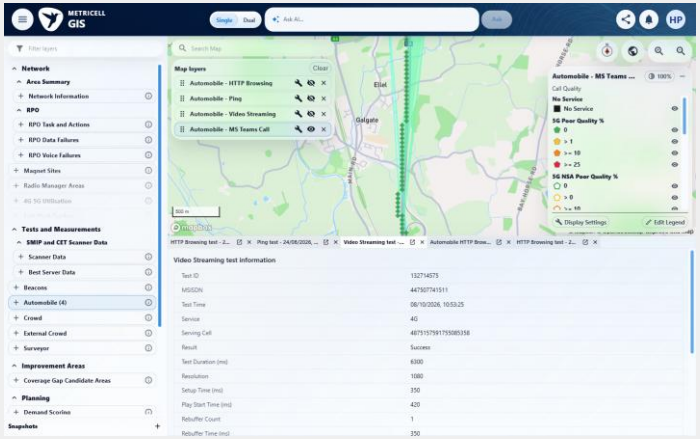

ID / Criterion	Criteria Tested	Expected Result	Actual Result / Evidence Path	Outcome
Criterion 9 continued: Given linked sites are disabled or the map is below the zoom level that supports linked cells, when display settings are open, then the linked-cell control is unavailable. **Browser URL recorded after criterion: https://o2intelligence-v4-dev.metricell.com/gis** **E32 - Sites off after cell click (criterion-9-sites-off-after-cell-click.png)**  **E33 - Low zoom before cell click (criterion-9-low-zoom-before-cell-click.png)** 				

ID / Criterion	Criteria Tested	Expected Result	Actual Result / Evidence Path	Outcome
Criterion 9 continued: Given linked sites are disabled or the map is below the zoom level that supports linked cells, when display settings are open, then the linked-cell control is unavailable. **Browser URL recorded after criterion: https://o2intelligence-v4-dev.metricell.com/gis** **E34 - Final (criterion-9-final.png)** 				

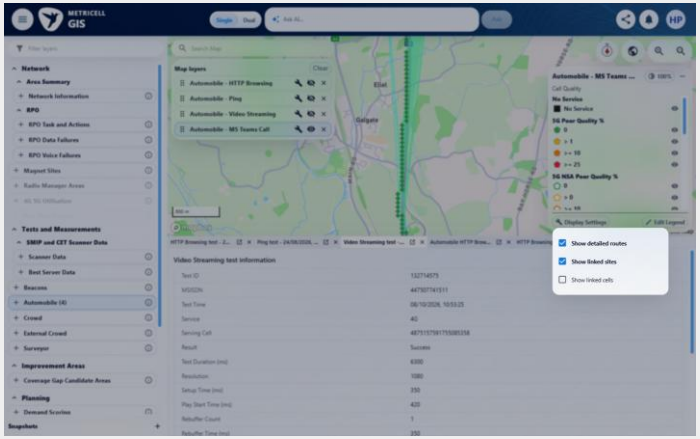

ID / Criterion	Criteria Tested	Expected Result	Actual Result / Evidence Path	Outcome
10.0.0	Given linked sites are enabled and the map is at a zoom level that supports linked cells, when the user turns linked cells on and the map refreshes, then linked-cell overlays are visible.	Given linked sites are enabled and the map is at a zoom level that supports linked cells, when the user turns linked cells on and the map refreshes, then linked-cell overlays are visible.	criterion-10-supported-controls.png establishes sites enabled and cells available at supported zoom. The later same-scope criterion-10-north-before-on.png and criterion-10-final.png are decisive: coloured sector wedges appear at cyan site anchors 519465 and 519671 when linked cells are enabled. Purple connection lines already exist in the before image and are not claimed as newly added cells. Earlier search/pan captures are setup, not the comparison baseline. Evidence: E28, E35, E36, E37, E38, E39	Passed

Criterion 10 evidence: Given linked sites are enabled and the map is at a zoom level that supports linked cells, when the user turns linked cells on and the map refreshes, then linked-cell overlays are visible.
Browser URL recorded after criterion: https://o2intelligence-v4-dev.metricell.com/gis

E28 - Before cells on (criterion-10-before-cells-on.png)

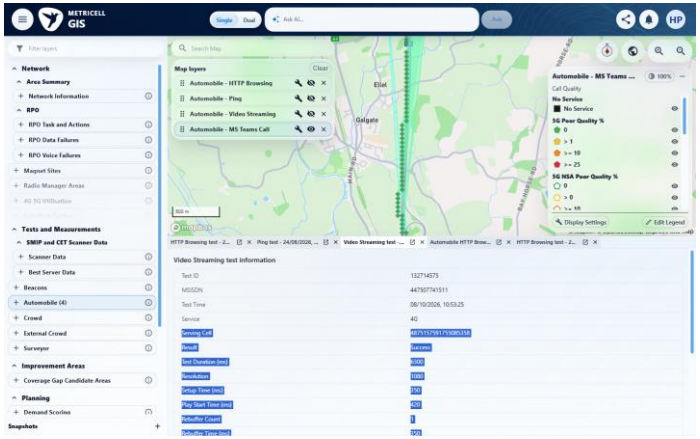

E35 - Supported controls (criterion-10-supported-controls.png)

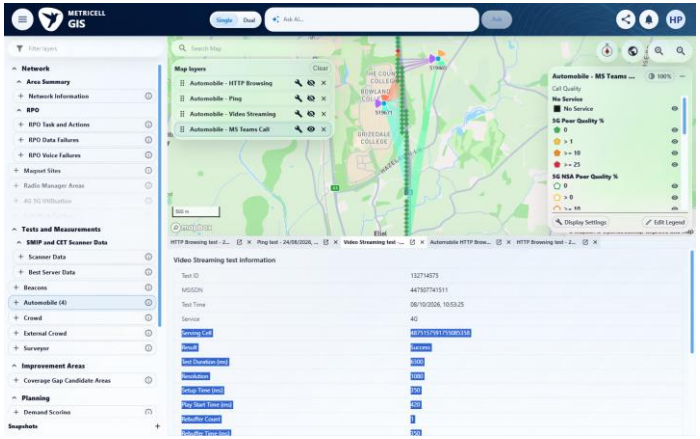

ID / Criterion	Criteria Tested	Expected Result	Actual Result / Evidence Path	Outcome
Criterion 10 continued: Given linked sites are enabled and the map is at a zoom level that supports linked cells, when the user turns linked cells on and the map refreshes, then linked-cell overlays are visible. Browser URL recorded after criterion: https://o2intelligence-v4-dev.metricell.com/gis				

E36 - Context search (criterion-10-context-search.png)

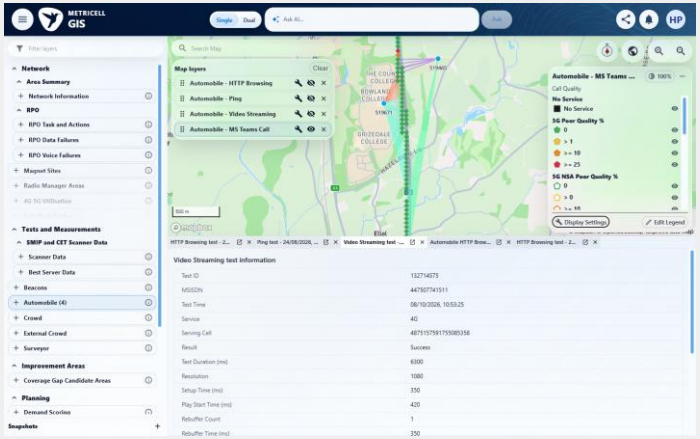

E37 - North search (criterion-10-north-search.png)

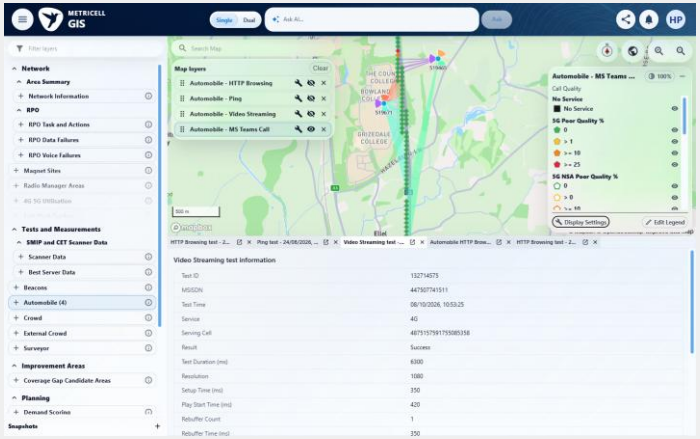

ID / Criterion	Criteria Tested	Expected Result	Actual Result / Evidence Path	Outcome

Criterion 10 continued: Given linked sites are enabled and the map is at a zoom level that supports linked cells, when the user turns linked cells on and the map refreshes, then linked-cell overlays are visible.
Browser URL recorded after criterion: https://o2intelligence-v4-dev.metricell.com/gis

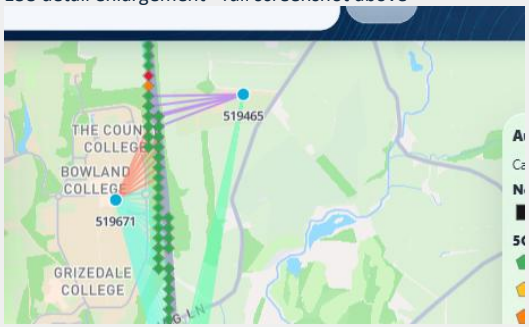

E38 - North before on (criterion-10-north-before-on.png)

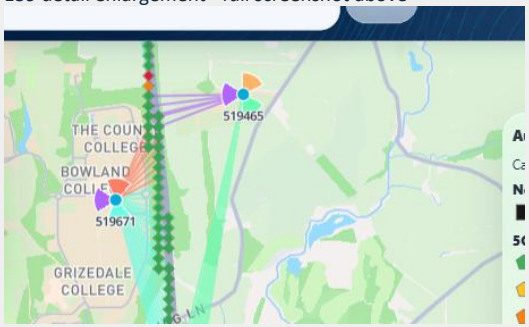

E39 - Final (criterion-10-final.png)

E38 detail enlargement - full screenshot above

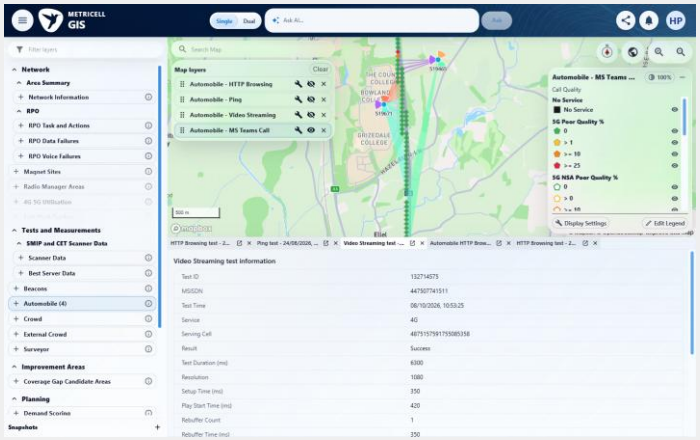

E39 detail enlargement - full screenshot above

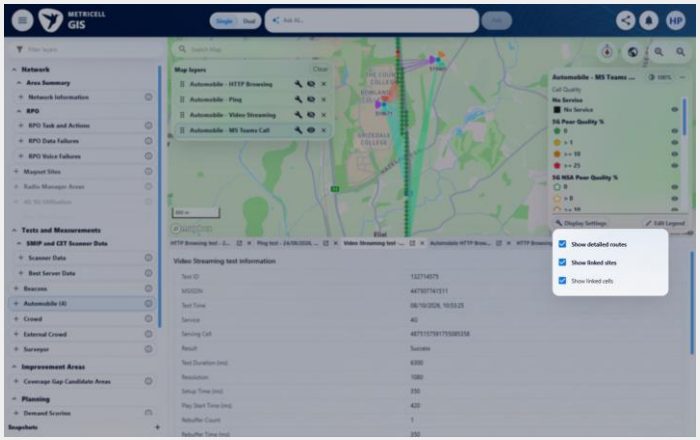

ID / Criterion	Criteria Tested	Expected Result	Actual Result / Evidence Path	Outcome
11.0.0	Given linked-cell overlays are visible, when the user turns linked cells off and the map refreshes, then those linked-cell overlays are hidden.	Given linked-cell overlays are visible, when the user turns linked cells off and the map refreshes, then those linked-cell overlays are hidden.	criterion-11-before-off.png shows coloured sector wedges at sites 519465 and 519671; criterion-11-cells-checked.png confirms Show linked cells checked. criterion-11-final.png shows those wedges removed at the matching extent after disabling cells, with cyan site anchors and linking lines retained. Evidence: E40, E41, E42	Passed

Criterion 11 evidence: Given linked-cell overlays are visible, when the user turns linked cells off and the map refreshes, then those linked-cell overlays are hidden.
Browser URL recorded after criterion: https://o2intelligence-v4-dev.metricell.com/gis

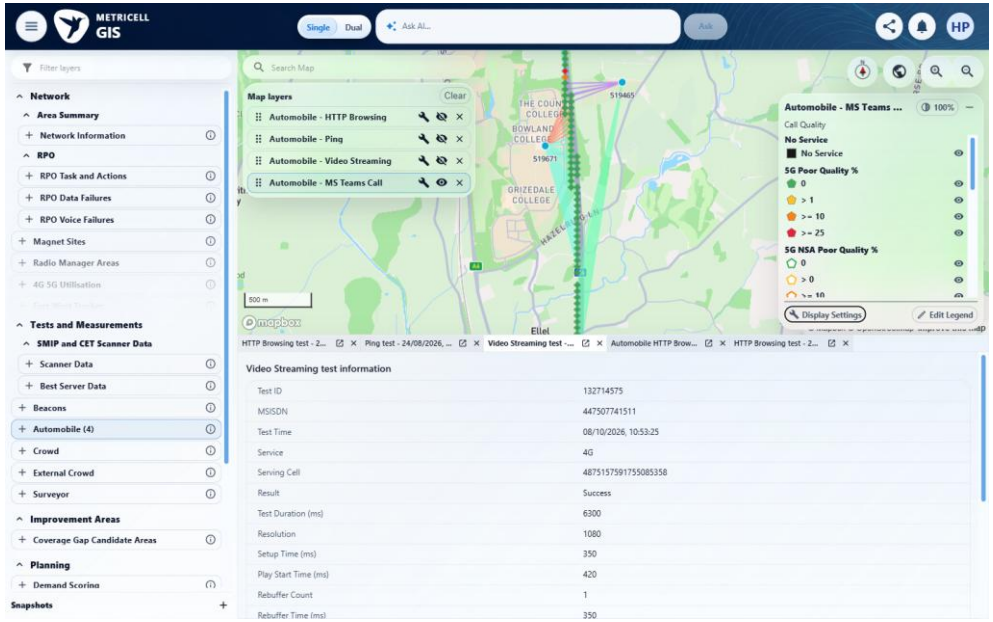

E40 - Before off (criterion-11-before-off.png)

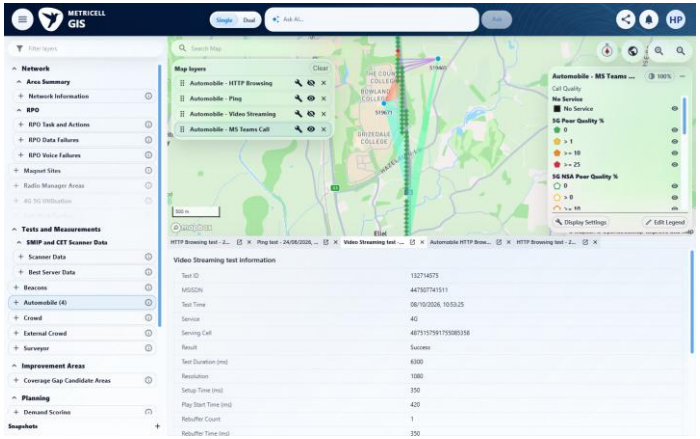

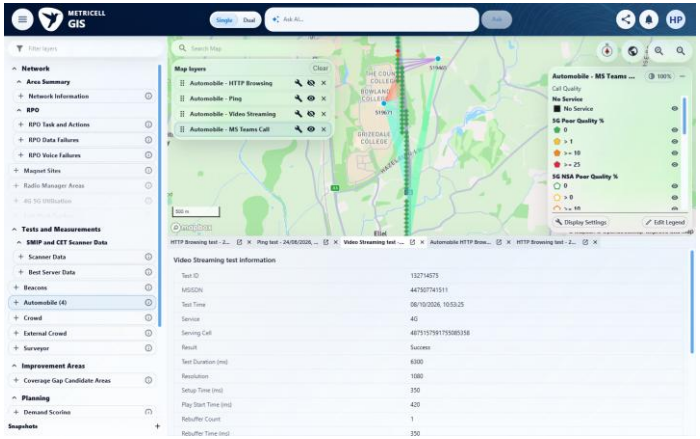

E41 - Cells checked (criterion-11-cells-checked.png)

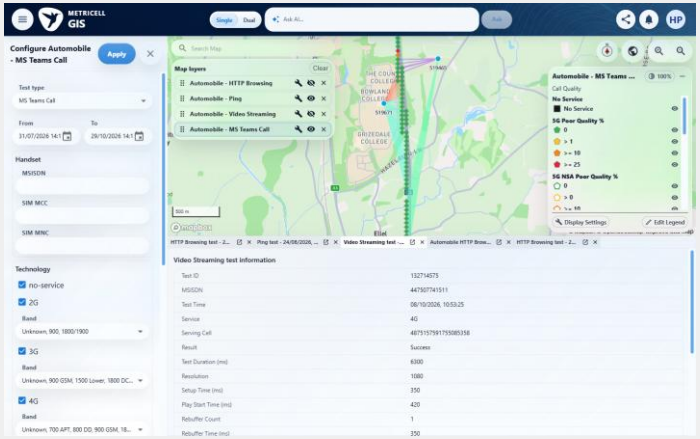

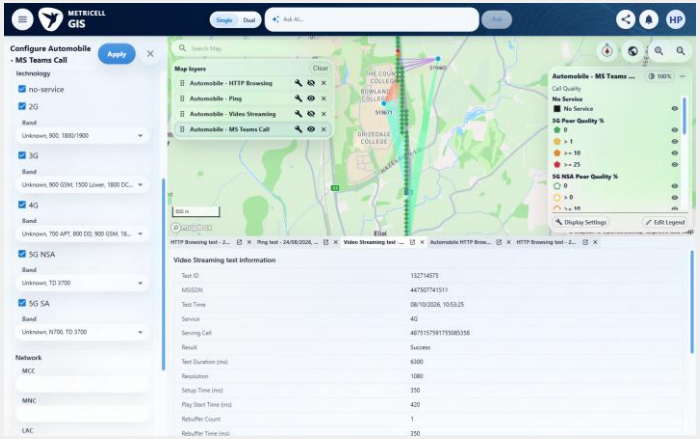

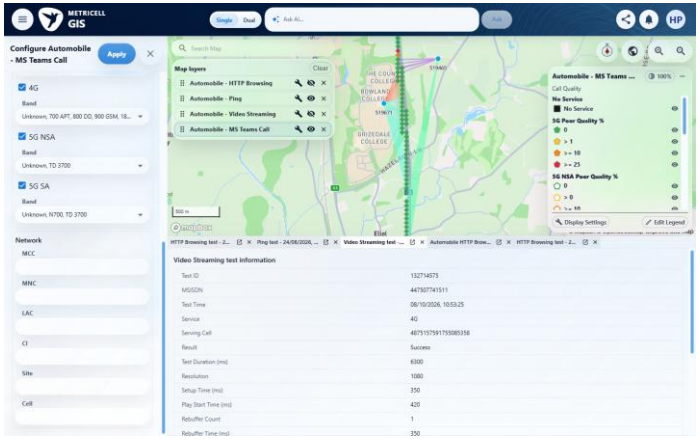

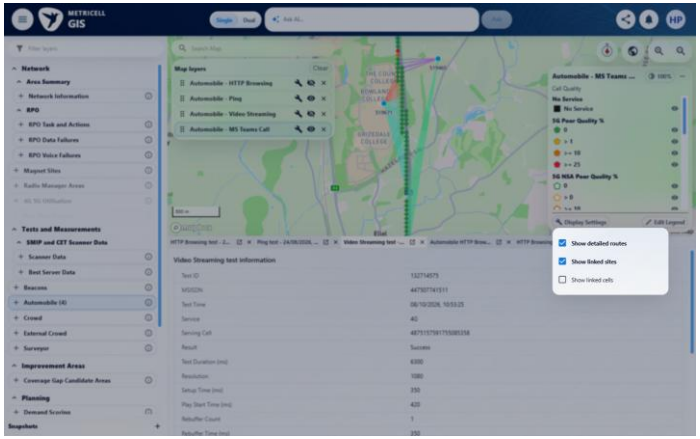

ID / Criterion	Criteria Tested	Expected Result	Actual Result / Evidence Path	Outcome
Criterion 11 continued: Given linked-cell overlays are visible, when the user turns linked cells off and the map refreshes, then those linked-cell overlays are hidden. **Browser URL recorded after criterion: https://o2intelligence-v4-dev.metricell.com/gis** **E42 - Final (criterion-11-final.png)**				

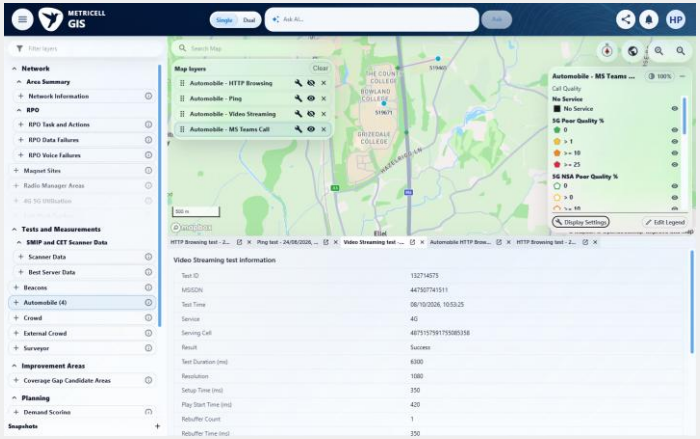

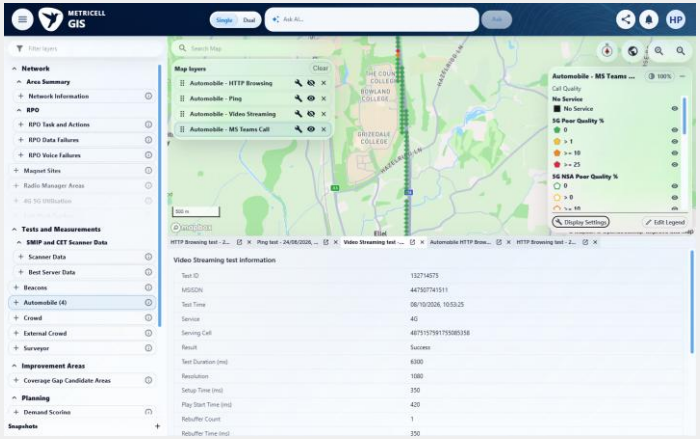

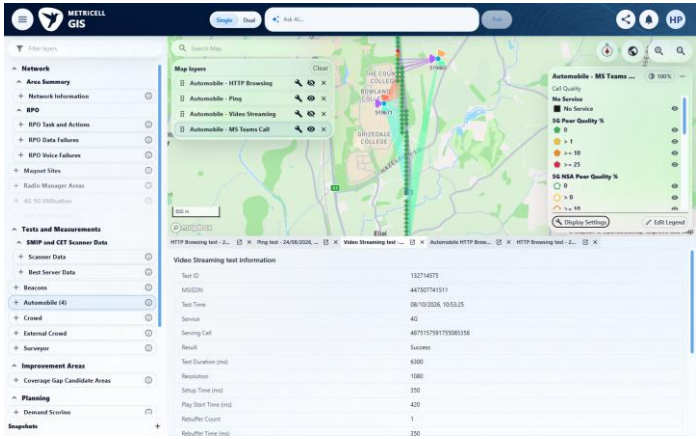

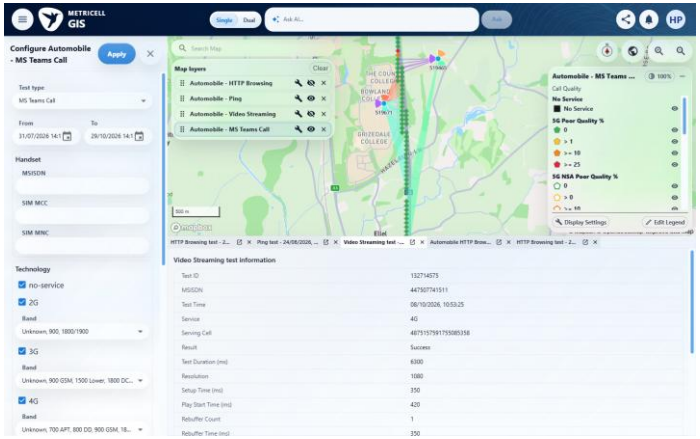

ID / Criterion	Criteria Tested	Expected Result	Actual Result / Evidence Path	Outcome
12.0.0	Given any MS Teams Call display setting is changed, when the map refreshes, then the setting is applied only to the active MS Teams Call layer and other visible map layers, standard map filters and legend point-filtering state retain their prior visible states.	Given any MS Teams Call display setting is changed, when the map refreshes, then the setting is applied only to the active MS Teams Call layer and other visible map layers, standard map filters and legend point-filtering state retain their prior visible states.	Configured colouring isolation is Blocked because criterion-12-before-route-change.png shows no colouring selector. criterion-12-baseline-map.png/baseline-layers.png, criterion-12-after-route-change.png, criterion-12-after-site-change.png, criterion-12-after-cell-change.png and criterion-12-final.png show the route/site/cell transitions with Ping visible and HTTP Browsing/Video Streaming hidden throughout. The before/after-filters top, middle and bottom pairs retain visible blank handset/network fields and technology selections, but clipped dates and band values prevent complete exact-value comparison. Only the upper legend viewport is captured, so preservation of all legend point-filter states is Unverified. Our criteria issue: canonical item 12 omits the source acceptance criterion's explicit Route Replay preservation requirement; Route Replay options themselves are out of scope, but unchanged-state proof is required and no independent baseline/final is supplied. Source-required underlying result-data preservation also lacks a criterion-owned comparable result baseline/final. These gaps are Unverified, not demonstrated product defects. criterion-12-cleanup.png restores the three original hidden layers and Video Streaming selection; the tester records original map center/zoom was not restored. Evidence: E43, E44, E45, E46, E47, E48, E49, E50, E51, E52, E53, E54	Blocked

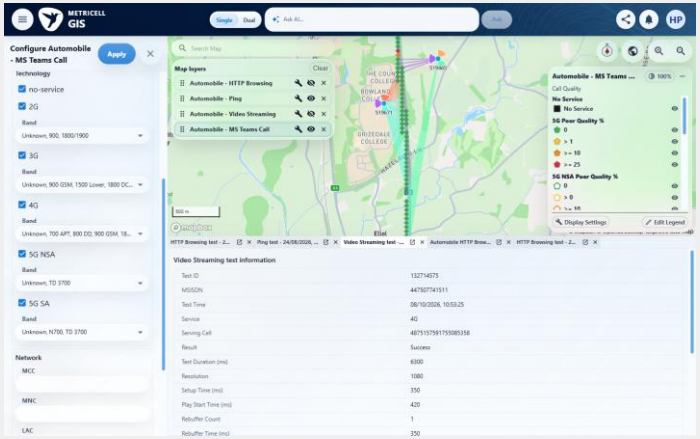

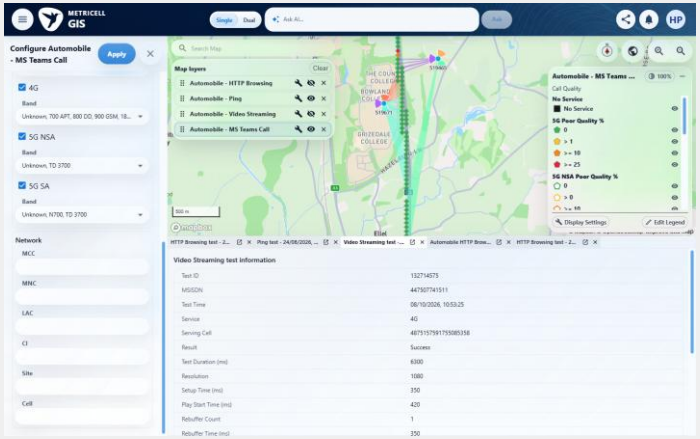

ID / Criterion	Criteria Tested	Expected Result	Actual Result / Evidence Path	Outcome
Criterion 12 evidence: Given any MS Teams Call display setting is changed, when the map refreshes, then the setting is applied only to the active MS Teams Call layer and other visible map layers, standard map filters and legend point-filtering state retain their prior visible states. **Browser URL recorded after criterion: https://o2intelligence-v4-dev.metricell.com/gis** **E43 - Baseline map (criterion-12-baseline-map.png)**  **E43 - Baseline layers (criterion-12-baseline-layers.png)**

About Metricell

Metricell is on a mission to deliver connectivity. We work with our customers to design, deliver and manage wireless communication networks – with a shared ambition of achieving flawless network experience. We've been responsible for many first-to-market products, and our technology is characterised by the relentless pursuit of automation and digitalisation.

Our geospatial intelligence tools traverse a wide variety of business processes – from Test & Measurement to Customer Experience Management – and we're pioneers in Crowdsourcing and Digital Self Care. Our technology is today in use by a range of customers; thousands of their personnel; and millions of subscribers worldwide.

Find out more at www.metricell.com
