1 Revision History

Version	Date	Revision Author	Summary of Changes
[1.0]	21/10/2026	TEST2 QA Automation	Generated from TEST2 evidence review

2 Test Cycle Information

Tester:	**Automated**
Jira Ticket:	TEST2-82
Environment:	o2intelligence-v4-dev.metricell.com
Browser Details:	Google Chrome 155.0.8059.85
Date of Test:	20/10/2026
Limitations during Testing:	Blocked criterion(s): 5. See the assessment below each criterion. SIMULATED UI STATE: criterion(s) 4, 6 use browser-local conditions, not backend integration tests. Method and recovery are disclosed with their evidence. Defects (No.) counts directly contradicted criteria, not unique Jira bugs; blockers and inconclusive evidence count as zero.
Overall review outcome:	Blocked
Browser URL(s) recorded after criteria:	https://o2intelligence-v4-dev.metricell.com/gis

3 Test Summary

Area of test	Outcome	Fail	Defects (No.)
1. When a selected Ping point's details have loaded, the detail view shows that point's Ping Time with the unit milliseconds (ms).	Passed	N	0
2. When Ping attributes are returned for the selected point, the detail view displays those attributes alongside the Ping Time.	Passed	N	0
3. With 5G NSA as the only selected technology, opening a Ping point displays details for that selected point without an error state.	Passed	N	0
4. While Ping details are loading, the detail view shows a loading state.	Passed	N	0
5. When Ping details are unavailable, the detail view shows a no-data state.	Blocked	N	0
6. When Ping details fail to load, the detail view shows an error state and does not display data as if it belonged to the selected point.	Passed	N	0

4 Test Cases

Each test maps to a criterion and decisive browser evidence. Inconclusive results are reported as Failed.

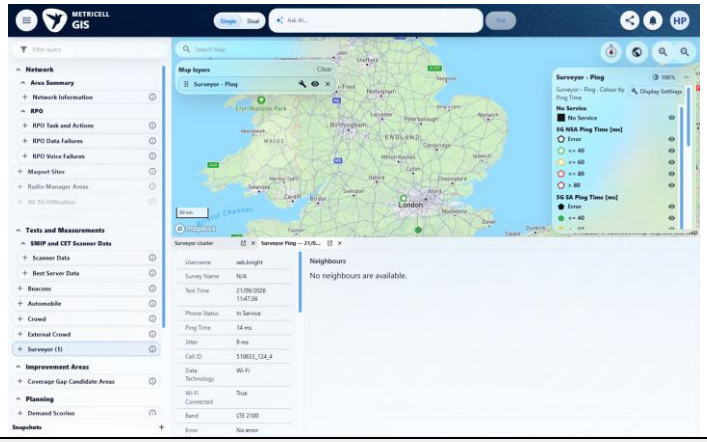

4.1 Tests

Preconditions:	V4 access and ticket conditions.	***Associated Requirements:***	Ticket criteria below.	Automation Notes:	Screenshots below each criterion; full log retained locally.

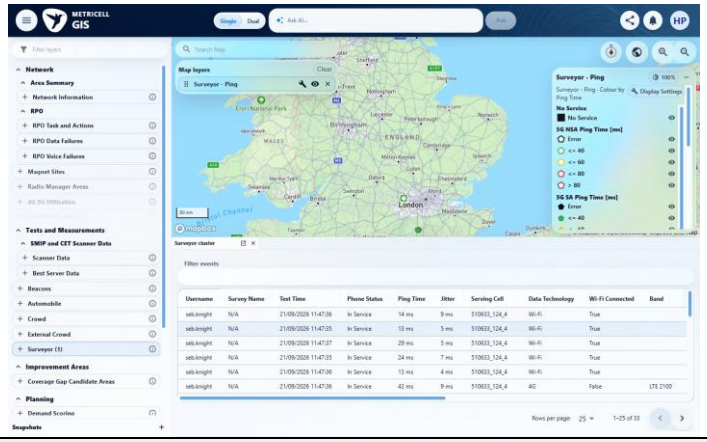

ID / Criterion	Criteria Tested	Expected Result	Actual Result / Evidence Path	Outcome
1.0.0	When a selected Ping point's details have loaded, the detail view shows that point's Ping Time with the unit milliseconds (ms).	When a selected Ping point's details have loaded, the detail view shows that point's Ping Time with the unit milliseconds (ms).	Ping Time is visibly rendered as 14 ms for the selected event. Evidence: E01, E02	Passed

Criterion 1 evidence: When a selected Ping point's details have loaded, the detail view shows that point's Ping Time with the unit milliseconds (ms).
Browser URL recorded after criterion: https://o2intelligence-v4-dev.metricell.com/gis

E01 - Final (criterion-1-final.png)

E02 - Cluster before point (criterion-1-cluster-before-point.png)

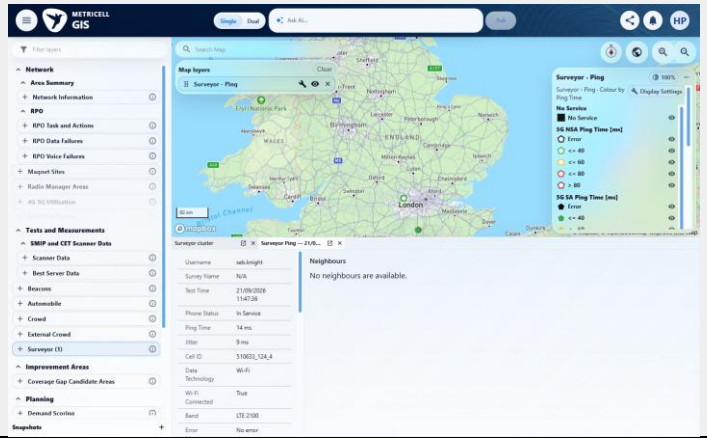

Criterion 1 assessment: criterion-1-cluster-before-point.png identifies the selected event at 21/09/2026 11:47:36 with 14 ms; criterion-1-final.png shows the matching loaded detail view with Ping Time 14 ms.
Testing notes: The selected Ping event at 21/09/2026 11:47:36 displayed Ping Time 14 ms after genuine details loaded. Initial Crowd exploration was cancelled without adding a layer. The failed first screenshot save was corrected by creating this handoff's folder and restarting from the launcher before collecting the referenced evidence.

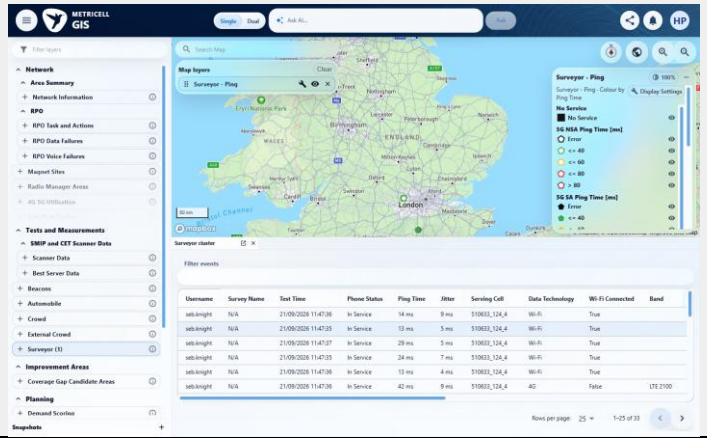

ID / Criterion	Criteria Tested	Expected Result	Actual Result / Evidence Path	Outcome
2.0.0	When Ping attributes are returned for the selected point, the detail view displays those attributes alongside the Ping Time.	When Ping attributes are returned for the selected point, the detail view displays those attributes alongside the Ping Time.	Ping Time and returned Ping/network/device attributes are displayed together. Evidence: E03, E02	Passed

Criterion 2 evidence: When Ping attributes are returned for the selected point, the detail view displays those attributes alongside the Ping Time.
Browser URL recorded after criterion: https://o2intelligence-v4-dev.metricell.com/gis

E03 - Final (criterion-2-final.png)

E02 - Cluster before point (criterion-2-cluster-before-point.png)

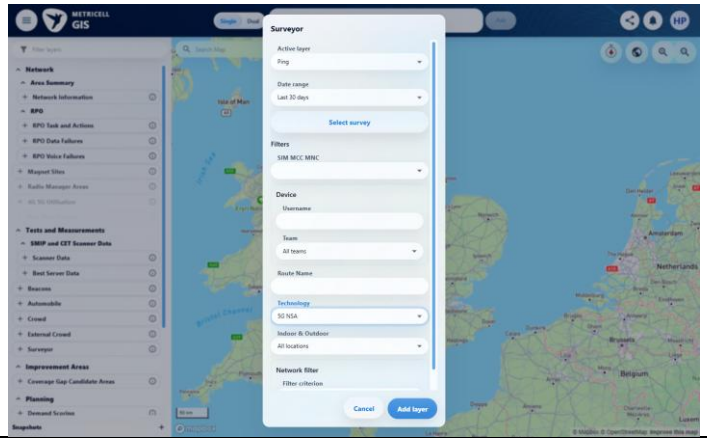

Criterion 2 assessment: criterion-2-final.png shows the selected event at 21/09/2026 11:47:36 with Ping Time 14 ms alongside Jitter 9 ms, Cell ID, Wi-Fi technology, Wi-Fi Connected True and Band LTE 2100.

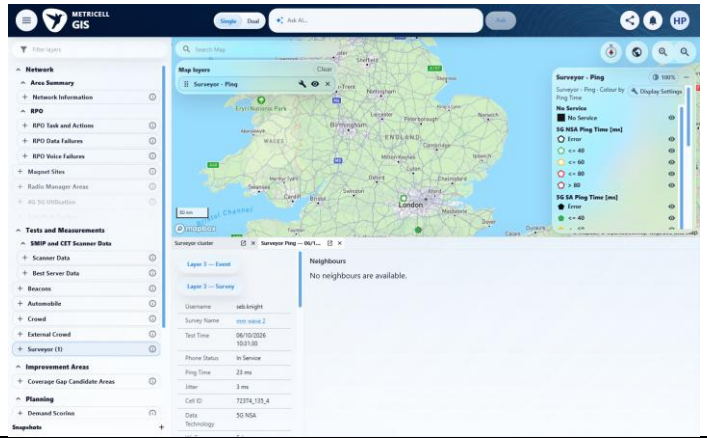

ID / Criterion	Criteria Tested	Expected Result	Actual Result / Evidence Path	Outcome
3.0.0	With 5G NSA as the only selected technology, opening a Ping point displays details for that selected point without an error state.	With 5G NSA as the only selected technology, opening a Ping point displays details for that selected point without an error state.	5G NSA-only point details load successfully and show the selected event's data. Evidence: E04, E05, E06	Passed

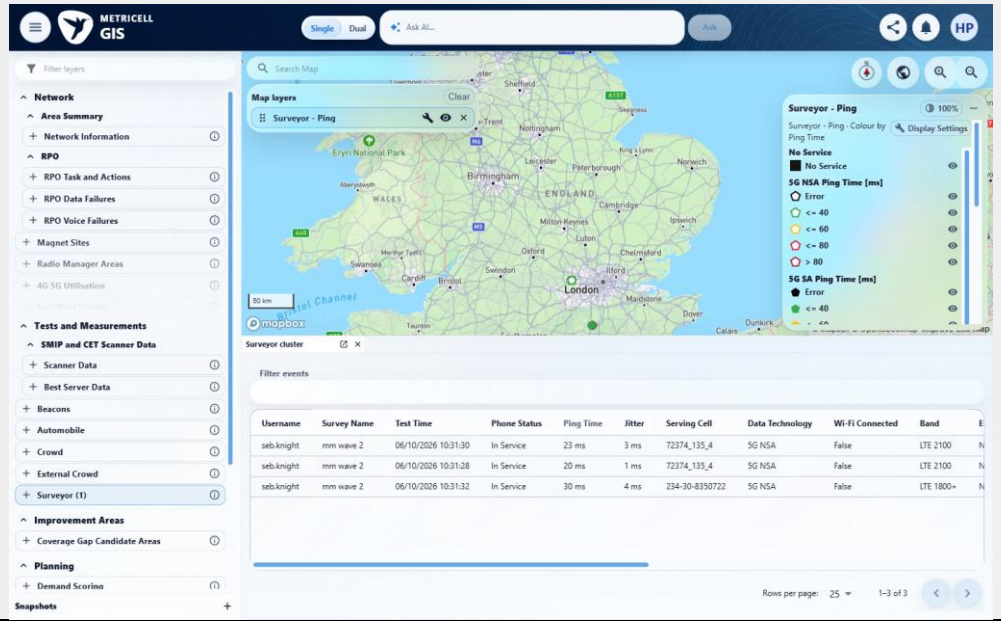

Criterion 3 evidence: With 5G NSA as the only selected technology, opening a Ping point displays details for that selected point without an error state.
Browser URL recorded after criterion: https://o2intelligence-v4-dev.metricell.com/gis

E04 - Nsa only before add (criterion-3-nsa-only-before-add.png)

E05 - Final (criterion-3-final.png)

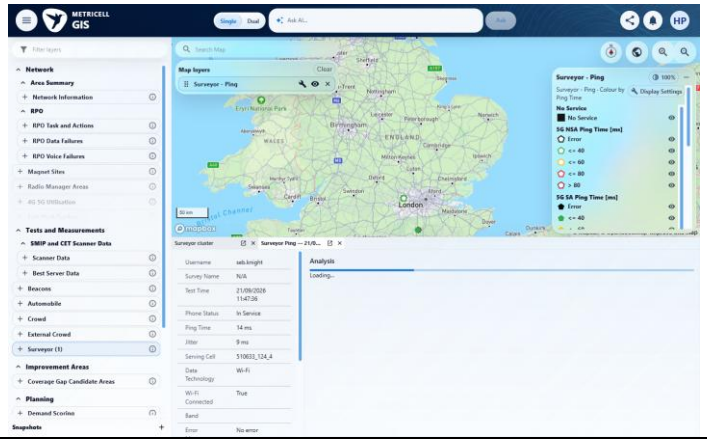

ID / Criterion	Criteria Tested	Expected Result	Actual Result / Evidence Path	Outcome
Criterion 3 continued: With 5G NSA as the only selected technology, opening a Ping point displays details for that selected point without an error state. **Browser URL recorded after criterion: https://o2intelligence-v4-dev.metricell.com/gis** **E06 - Cluster before point (criterion-3-cluster-before-point.png)** 			
Criterion 3 assessment: criterion-3-tech-toggle-6.png and criterion-3-nsa-only-before-add.png show only 5G NSA selected. criterion-3-cluster-before-point.png identifies the 06/10/2026 10:31:30 event; criterion-3-final.png shows its loaded details, Ping Time 23 ms, Jitter 3 ms and Data Technology 5G NSA without a detail-load error. Testing notes: With only 5G NSA selected (outbound technology filter [13]), the selected event at 06/10/2026 10:31:30 loaded Ping Time 23 ms, Jitter 3 ms and Data Technology 5G NSA without a detail-load error. Cleanup initially closed only the cluster because a locator changed; the remaining detail tab and test layer were subsequently removed and restoration was captured separately. Waited for genuine details; verified 5G NSA, 23 ms and no load error, captured final state and URL. Closed test tabs and removed the layer; corrected an initial cleanup locator timeout and captured completed restoration.				

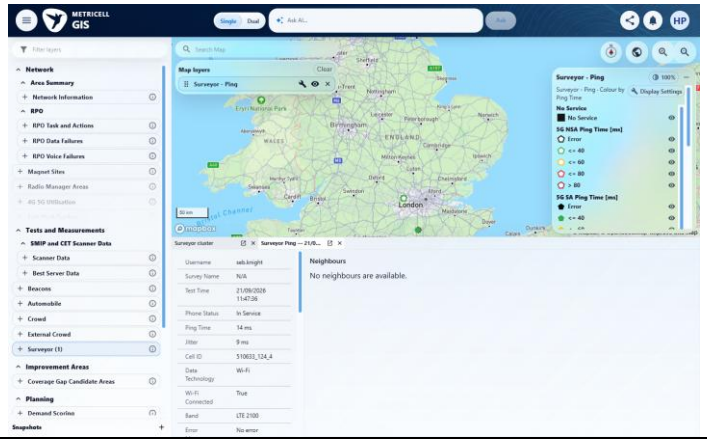

ID / Criterion	Criteria Tested	Expected Result	Actual Result / Evidence Path	Outcome
4.0.0	While Ping details are loading, the detail view shows a loading state.	While Ping details are loading, the detail view shows a loading state.	Analysis shows Loading… and a progress bar while its genuine read request is held; details recover when released. Evidence: E07, E01, E08	Passed

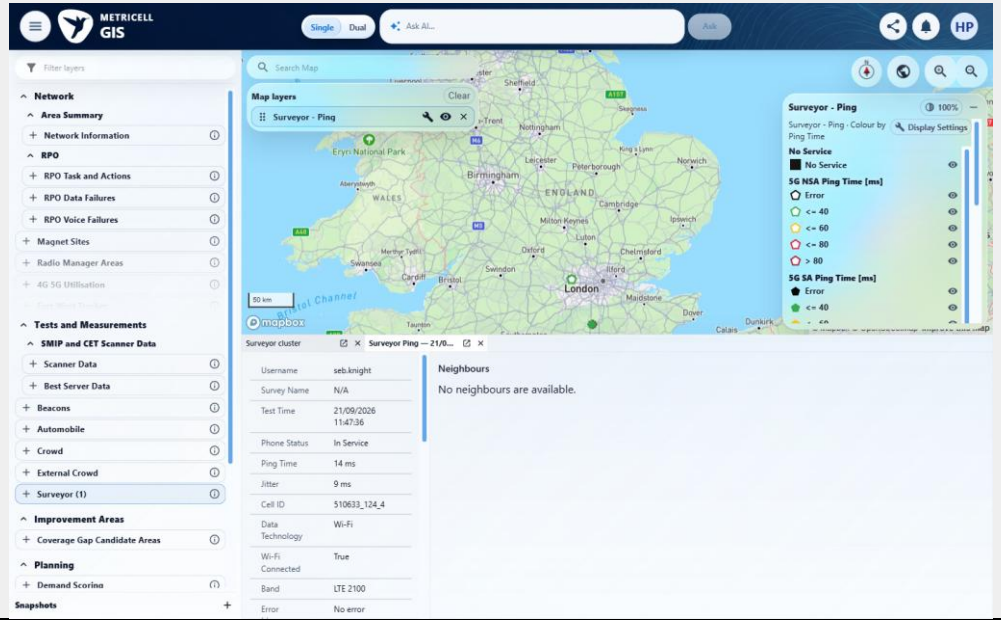

Criterion 4 evidence: While Ping details are loading, the detail view shows a loading state.
SIMULATED UI STATE: browser-local condition; recovery uses the genuine service.
Browser URL recorded after criterion: https://o2intelligence-v4-dev.metricell.com/gis

E07 - Final (criterion-4-final.png)

E01 - Recovery (criterion-4-recovery.png)

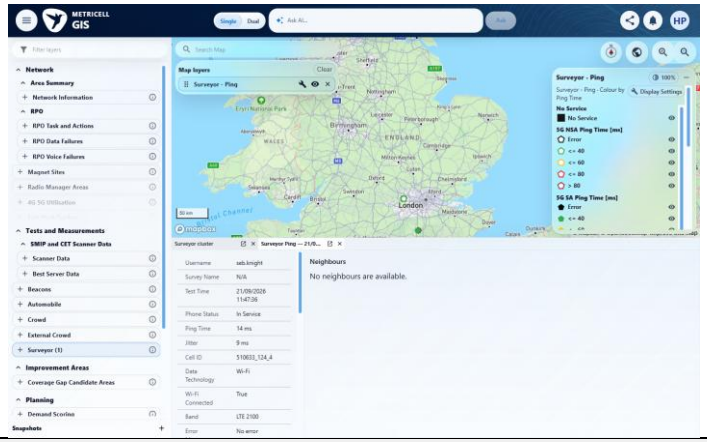

ID / Criterion	Criteria Tested	Expected Result	Actual Result / Evidence Path	Outcome
Criterion 4 continued: While Ping details are loading, the detail view shows a loading state. **SIMULATED UI STATE: browser-local condition; recovery uses the genuine service.** **Browser URL recorded after criterion: https://o2intelligence-v4-dev.metricell.com/gis** **E08 - Genuine point baseline (criterion-4-genuine-point-baseline.png)**  	Criterion 4 assessment: SIMULATED UI STATE: held the original POST https://o2intelligence-v4-dev.metricell.com/api/platform/surveyor/ping/event-analysis for pointId 9531501 / mercatorKey 1513490457731707874 after observing its genuine successful request/response; other methods/records fell through and no response body was fabricated. criterion-4-genuine-point-baseline.png shows the loaded target at 11:47:36 / 14 ms; criterion-4-before-held-reopen.png shows its closed detail tab; criterion-4-final.png shows Analysis Loading... and a progress bar for the same target. criterion-4-recovery.png shows genuine recovery after release; results record owned-handler removal in finally and criterion-4-cleanup.png shows test tabs/layer removed. This proves this endpoint's Analysis loading UI only, not backend performance or loading of every detail panel.			

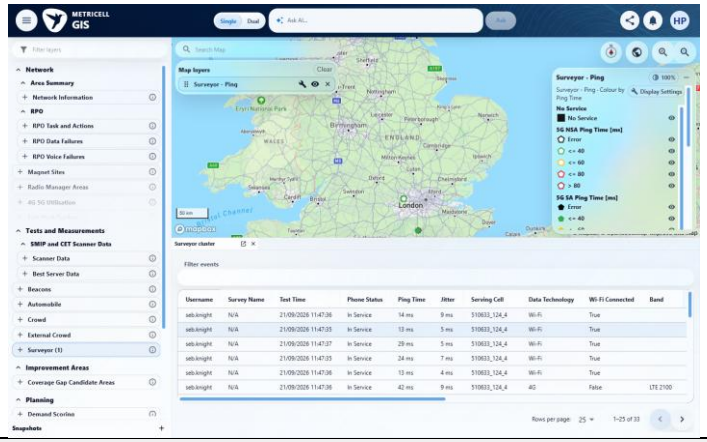

ID / Criterion	Criteria Tested	Expected Result	Actual Result / Evidence Path	Outcome
5.0.0	When Ping details are unavailable, the detail view shows a no-data state.	When Ping details are unavailable, the detail view shows a no-data state.	Populated Ping details load; the unavailable-details/no-data state could not be established. Evidence: E09, E10	Blocked

Criterion 5 evidence: When Ping details are unavailable, the detail view shows a no-data state.
Browser URL recorded after criterion: https://o2intelligence-v4-dev.metricell.com/gis

E09 - Final (criterion-5-final.png)

E10 - Cluster before point (criterion-5-cluster-before-point.png)

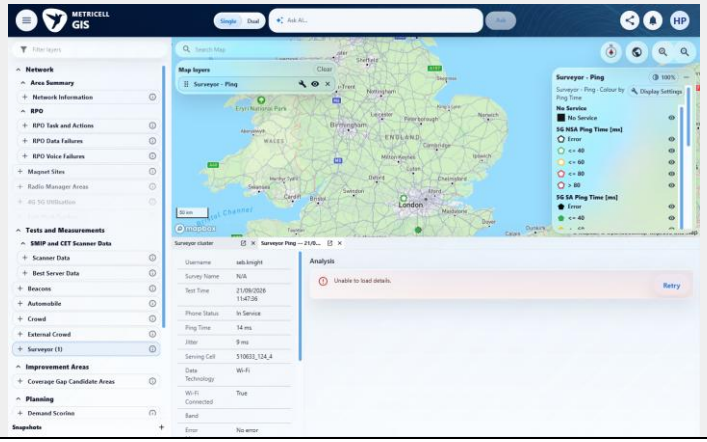

Criterion 5 assessment: No unavailable Ping-detail fixture or authoritative empty-detail response contract was available. criterion-5-final.png shows populated selected-point details with Ping Time 14 ms; No neighbours are available is not a no-data state for Ping details. The unavailable-details state could not be exercised; a known unavailable event or documented empty-detail contract is required.
Testing notes: No unavailable-details fixture was identified in the supplied inputs or observed point data. The selected event's genuine POST /api/platform/surveyor/ping/event-analysis succeeded with populated details; its empty neighbours list is not an empty Ping-detail response. The authoritative empty-response contract is unknown, so no synthetic empty response was installed. Need a known unavailable Ping event or documented empty-detail contract to verify this criterion. Determined that the empty neighbours list does not establish unavailable Ping details; no verified empty-detail response contract or unavailable fixture was available.

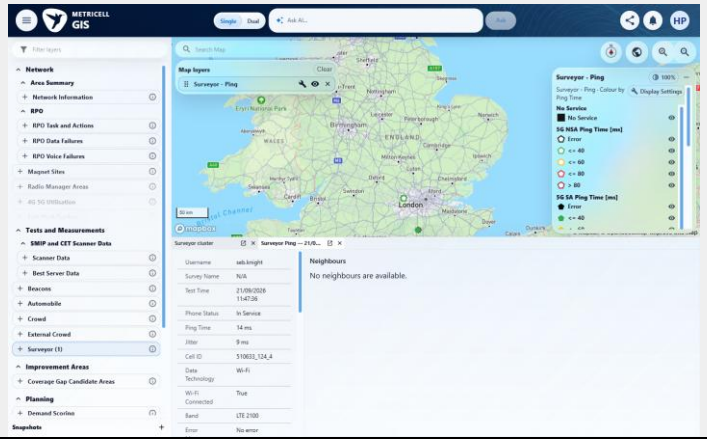

ID / Criterion	Criteria Tested	Expected Result	Actual Result / Evidence Path	Outcome
6.0.0	When Ping details fail to load, the detail view shows an error state and does not display data as if it belonged to the selected point.	When Ping details fail to load, the detail view shows an error state and does not display data as if it belonged to the selected point.	Analysis shows Unable to load details. with Retry, without the distinct prior event's analysis; genuine retry recovers. Evidence: E11, E12, E01, E13	Passed

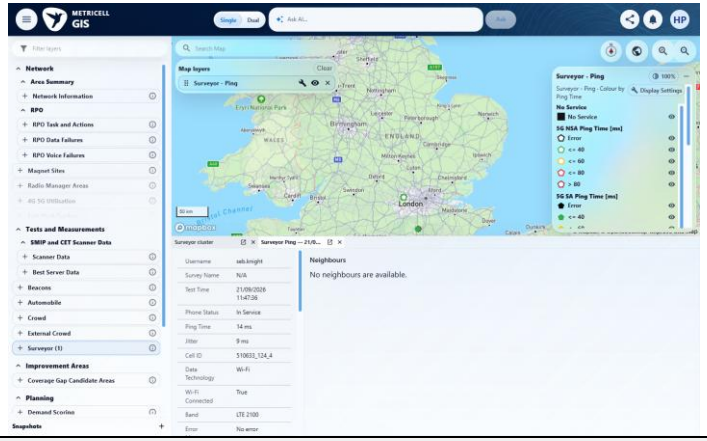

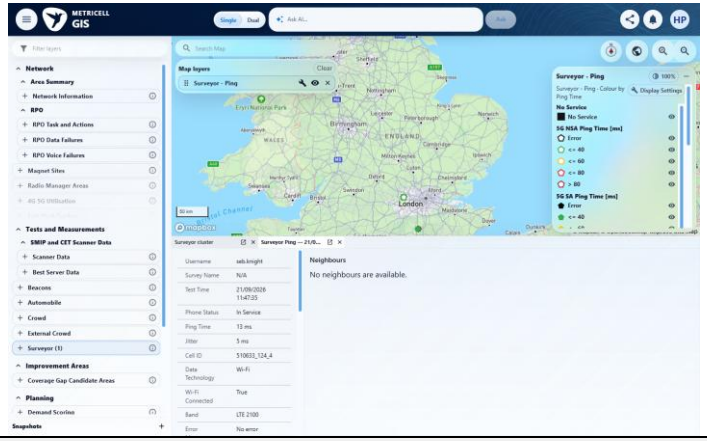

Criterion 6 evidence: When Ping details fail to load, the detail view shows an error state and does not display data as if it belonged to the selected point.
SIMULATED UI STATE: browser-local condition; recovery uses the genuine service.
Browser URL recorded after criterion: https://o2intelligence-v4-dev.metricell.com/gis

E11 - Final (criterion-6-final.png)

E12 - Recovery (criterion-6-recovery.png)

ID / Criterion	Criteria Tested	Expected Result	Actual Result / Evidence Path	Outcome
Criterion 6 continued: When Ping details fail to load, the detail view shows an error state and does not display data as if it belonged to the selected point. **SIMULATED UI STATE: browser-local condition; recovery uses the genuine service.** **Browser URL recorded after criterion: https://o2intelligence-v4-dev.metricell.com/gis** **E01 - Genuine target baseline (criterion-6-genuine-target-baseline.png)**  **E13 - Distinct valid point (criterion-6-distinct-valid-point.png)** 				
Criterion 6 assessment: SIMULATED UI STATE: one exact-target POST https://o2intelligence-v4-dev.metricell.com/api/platform/surveyor/ping/event-analysis for pointId 9531501 / mercatorKey 1513490457731707874 received HTTP 500 text/plain Internal Server Error after the genuine successful request established the endpoint; other methods/records fell through. criterion-6-genuine-target-baseline.png shows target 11:47:36 / 14 ms; criterion-6-before-distinct-point.png, criterion-6-distinct-valid-point.png and criterion-6-before-failed-target.png establish the intervening distinct event at 11:47:35 / 13 ms and its closure. criterion-6-final.png shows Unable to load details. and Retry with the target's own 11:47:36 / 14 ms summary and no prior event analysis. Results record exact-handler removal in finally; criterion-6-recovery.png shows genuine Retry recovery and criterion-6-cleanup.png shows test tabs/layer removed. This proves synthetic Analysis endpoint error handling and stale-data exclusion, not a naturally occurring backend failure or failure of every detail panel.

Better Connected

About Metricell

Metricell is on a mission to deliver connectivity. We work with our customers to design, deliver and manage wireless communication networks – with a shared ambition of achieving flawless network experience. We've been responsible for many first-to-market products, and our technology is characterised by the relentless pursuit of automation and digitalisation.

Our geospatial intelligence tools traverse a wide variety of business processes – from Test & Measurement to Customer Experience Management – and we're pioneers in Crowdsourcing and Digital Self Care. Our technology is today in use by a range of customers; thousands of their personnel; and millions of subscribers worldwide.
