3 Test Summary

Area of test	Pass (Y/N)	Fail (Y/N)	Blocked (Y/N)	Defect No
1. Before selecting the MS Teams Call layer, the map shows no MS Teams Call test-result points.	Y	N	N	0
2. When the user selects the MS Teams Call layer and authorised matching results are available, each matching result is shown as a selectable map point.	Y	N	N	0
3. For a displayed MS Teams Call point with Poor Quality 0–0.99, its map colour is Green.	Y	N	N	0
4. For a displayed MS Teams Call point with Poor Quality 1–9.99, its map colour is Yellow.	Y	N	N	0
5. For a displayed MS Teams Call point with Poor Quality 10–24.99, its map colour is Amber.	Y	N	N	0
6. For a displayed MS Teams Call point with Poor Quality 25 or greater, its map colour is Red.	Y	N	N	0
7. When the user selects a map point and its details load successfully, the details dialog displays Test ID, Test Result, Connection Time, Call Duration, Poor Quality, MSISDN and Test Technologies.	Y	N	N	0
8. When the user selects a map point and its details load successfully, the details dialog displays signal and download charts and shows handover markers when available.	Y	N	N	0
9. When the user selects a map point and its details load successfully, the details dialog displays a detailed-sample table that omits label, latitude, longitude and handover-only columns.	Y	N	N	0
10. When detailed samples are displayed, sorting a supported column changes their displayed order to match the selected sort.	Y	N	N	0
11. When detailed samples are displayed, filtering a supported column limits the displayed samples to those matching the filter.	N	Y	N	1
12. When the user exports a selected test as CSV, the exported CSV contains data for that selected test.	Y	N	N	0
13. When a zero-duration result is selected, its details dialog does not display stale or misleading data.	N	N	Y	0
14. When details for a selected result fail to load, the dialog does not display stale or misleading data.	Y	N	N	0

4 Test Cases

Each test maps to a criterion and decisive browser evidence. Inconclusive results are reported as Failed.

Existing Call symbols are not MS Teams results. Evidence: E01, E02, E03	Passed

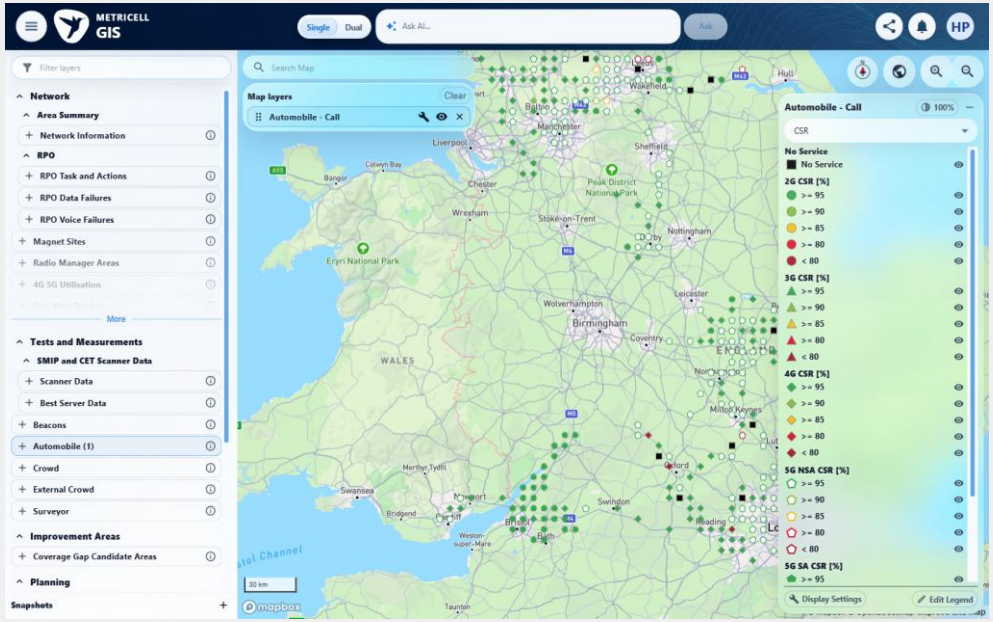

Criterion 1 evidence: Before selecting the MS Teams Call layer, the map shows no MS Teams Call test-result points.

2.0.0	When the user selects the MS Teams Call layer and authorised matching results are available, each matching result is shown as a selectable map point.	When the user selects the MS Teams Call layer and authorised matching results are available, each matching result is shown as a selectable map point.	criterion-2-focused-final-scope-47a396a1-b79f-49a3-9bb1-c4e09dcd584d.png, criterion-2-focused-plotted-3c58988e-5f2a-4ad7-9e24-6d4a0fc87cc5.png, criterion-2-focused-final-425b175d-f0da-4128-bc02-7064eb3784d1.png show the configured Automobile MS Teams scope, its actual single green outlined map result and normally opened test 132121102. The scope capture contains unrelated Surveyor results; focused-plotted hides that layer. Hash-verified criterion-2-bounded-points.json, criterion-2-bounded-members.json and criterion-2-selected-response.json reconcile the complete one-aggregate/one-member scope and matching successful detail identity; criterion-2-reconciliation.json records normal pointer selection. Coverage is the supplied genuine Site 5201, API 25 August 2026 11:33–11:36 UTC and documented viewport (1/1), not deployment-wide completeness. Evidence: E04, E05, E06	Passed

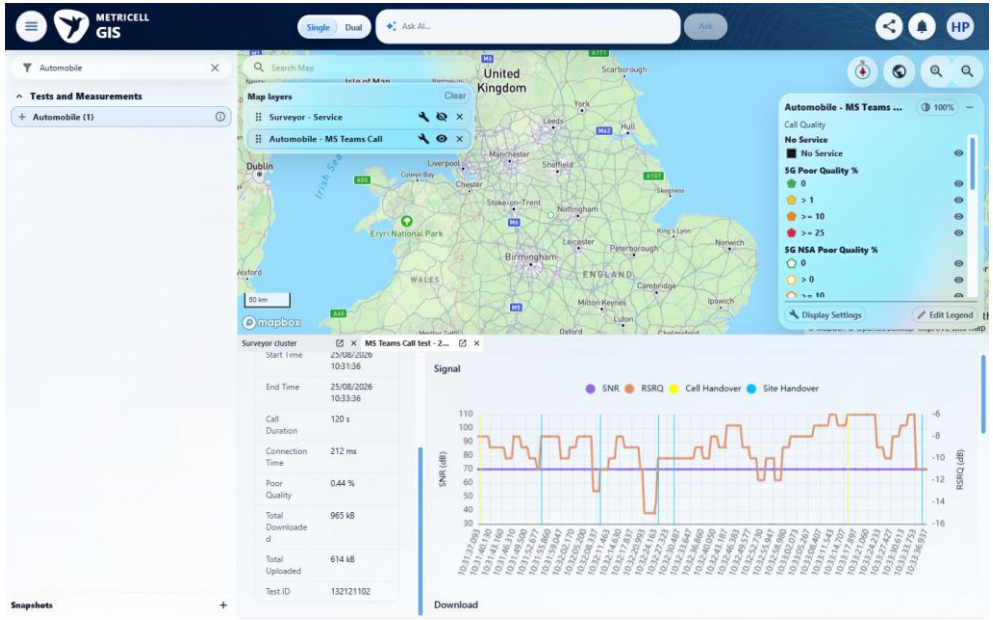

Criterion 2 evidence: When the user selects the MS Teams Call layer and authorised matching results are available, each matching result is shown as a selectable map point.

Hash-verified criterion-3-bounded-points.json, criterion-3-bounded-members.json and criterion-3-selected-response.json independently reconcile aggregate 864691673379112247 at 0.437636761487964% to its sole member and normal detail selection. The saved PNG hash and actual green target region corroborate criterion-3-point-identity.json. Aggregate and rounded member values both lie in 0–0.99; interval endpoints were not separately sampled. Evidence: E07, E08, E09	Passed

Hash-verified criterion-4-scoped-points-identity.json, criterion-4-selection-request-identity.json, criterion-4-members-identity.json and criterion-4-detail-identity.json reconcile aggregate 864691674184418606 at 1.750547045951859% through the exact normal selection mercatorKey to its sole member. criterion-4-verified-marker-identity.json matches the raw point and native plotted PNG hash; the target is visibly yellow. Aggregate and member values are distinct interior-band examples; endpoints and date-filter exclusion semantics were not exercised. Evidence: E10, E11, E12	Passed

11.0.0	When detailed samples are displayed, filtering a supported column limits the displayed samples to those matching the filter.	When detailed samples are displayed, filtering a supported column limits the displayed samples to those matching the filter.	criterion-11-supplement-final-a6141306-3a6a-49f9-9767-0f08ad05a0d6.png identifies the actual individual MS Teams detailed-sample table with sort controls and CSV export. Hash-verified criterion-11-controls.json inventories all eleven headers, header controls and table toolbar; only sorting is exposed and the visible filter belongs to the layer catalogue. The complete criterion-owned inventory corroborates the absent required sample/column filtering capability in this view. Evidence: E34	Failed

Criterion 11 evidence: When detailed samples are displayed, filtering a supported column limits the displayed samples to those matching the filter.

12.0.0	When the user exports a selected test as CSV, the exported CSV contains data for that selected test.	When the user exports a selected test as CSV, the exported CSV contains data for that selected test.	criterion-12-supplement-final-ada45017-719b-4d93-a74b-f69149744fc3.png shows the selected MS Teams detailed-sample view and normal Export CSV control. Hash-verified criterion-12-export.csv and criterion-12-response.json reconcile all 457 exported rows to genuine selected test 132124168 across timestamps, technology, site/cell identities, signal, RSRQ/SNR including empty/null pairs, rates and sizes. Rates match bytes/s × 8/1000 to Kbps; sizes match bytes/1024 to response kB. Timestamp comparison uses the supplied date/time precision. Raw private data is retained locally. Evidence: E35	Passed

Criterion 12 evidence: When the user exports a selected test as CSV, the exported CSV contains data for that selected test.

13.0.0	When a zero-duration result is selected, its details dialog does not display stale or misleading data.	When a zero-duration result is selected, its details dialog does not display stale or misleading data.	criterion-13-supplement-final-26f79388-68a3-43b0-8e5b-fbe4d29157f0.png shows the complete bounded two-row MS Teams cluster, both Call Duration values 120 s. No genuine zero-duration qualifying record was supplied or located in this checked scope, so zero-duration selection and stale-data comparison cannot be assessed. This fixture blocker does not establish dataset-wide absence or a product defect. Evidence: E36	Blocked
Criterion 13 assessment: Testing notes: Captured the bounded fixture search. No qualifying zero-duration identity was supplied or located in this checked scope; did not claim a product failure or a zero-duration pass.				

Criterion 13 evidence: When a zero-duration result is selected, its details dialog does not display stale or misleading data.

14.0.0	When details for a selected result fail to load, the dialog does not display stale or misleading data.	When details for a selected result fail to load, the dialog does not display stale or misleading data.	The recorded check satisfied the criterion; see the assessment below. Evidence: E37, E38, E39	Passed

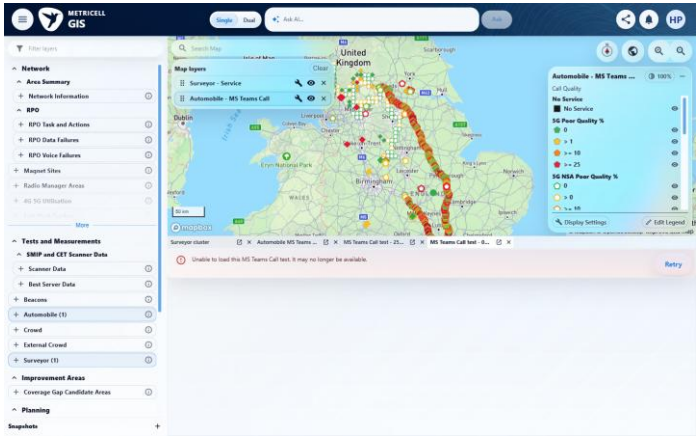

Criterion 14 assessment: SIMULATED UI STATE: on configured development https://o2intelligence-v4-dev.metricell.com/gis, the recorded browser-only exact-URL GET handler injected HTTP 503 for /api/platform/automobile/ms-teams-call/tests/131879769 after genuine record 132124168 loaded. Failure-status provenance is RFC 9110 section 15.6.4; the synthetic non-success JSON makes no project error-schema claim. criterion-14-supplement-before-385e41bf-2bbe-484a-abab-93892b5a257e.png, criterion-14-supplement-final-3830d827-7d85-499f-9fb8-7df1ed351058.png, criterion-14-supplement-restored-672b6bc0-3229-473e-831d-a45622987a71.png show the populated 25 August 11:33:08 baseline, explicit MS Teams load error and Retry with no stale summary/charts/samples, and recovery to the distinct 4 August 11:41:02 record. Recorded steps confirm one intercepted request, exact handler removal, genuine HTTP 200 on Retry with 455 samples, verification the handler was absent, removal of owned tabs/layer and restoration of the pre-existing Surveyor session/camera. This error-only criterion needs no loading transition or project-specific error-body contract. Visible client error handling and recovery are established; this does not establish a naturally occurring backend incident or backend integration.
