About Metricell 22

1 Revision History

Version	Date	Revision Author	Summary of Changes
[1.0]	21/10/2026	TEST2 QA Automation	Generated from TEST2 evidence review

2 Test Cycle Information

Tester:	**Automated**
Jira Ticket:	TEST2-84
Environment:	o2intelligence-v4-dev.metricell.com
Browser Details:	Google Chrome 155.0.8059.85
Date of Test:	21/10/2026
Limitations during Testing:	Blocked criterion(s): 1, 3, 4, 5, 6, 7, 9. See the assessment below each criterion. Defects (No.) counts directly contradicted criteria, not unique Jira bugs; blockers and inconclusive evidence count as zero.
Overall review outcome:	Blocked
Browser URL(s) recorded after criteria:	https://o2intelligence-v4-dev.metricell.com/gis

3 Test Summary

Area of test	Outcome	Fail	Defects (No.)
1. Selecting one Building point opens a separate dashboard for that building once its details load.	Blocked	N	0
2. When multiple Building points are selected at one map location, the user can choose which building dashboard to open.	Passed	N	0
3. When the selection contains too many Building points to identify a building, the user is prompted to zoom in or apply filters, and no ambiguous building dashboard opens.	Blocked	N	0
4. When building information is available, the dashboard shows building and floorplan summary information in sortable and filterable tables.	Blocked	N	0
5. When the building has floorplans, the dashboard displays their images and lets the user select a floorplan.	Blocked	N	0
6. Selecting a floorplan displays its image with the associated survey points overlaid.	Blocked	N	0
7. When the building has no floorplans, the dashboard displays available building details without an empty floorplan image area.	Blocked	N	0
8. While Building data is loading, a loading state is displayed.	Passed	N	0
9. When Building data is unavailable, a no-data state is displayed.	Blocked	N	0
10. When Building data fails to load, an error state is displayed without incorrect building data.	Passed	N	0

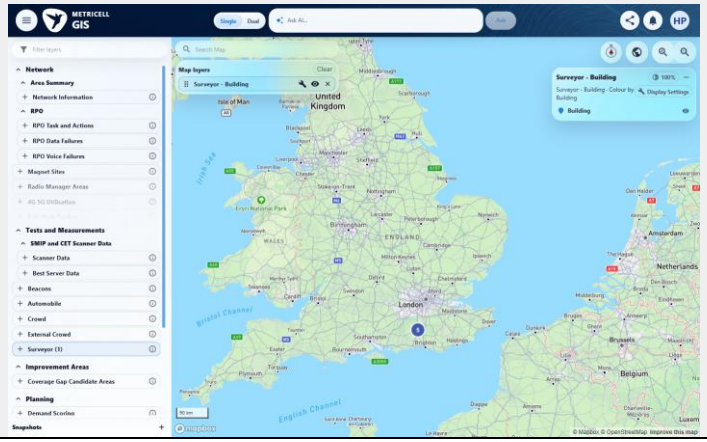

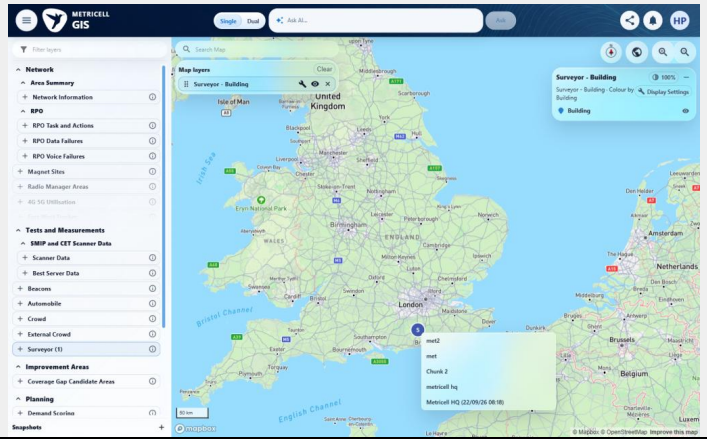

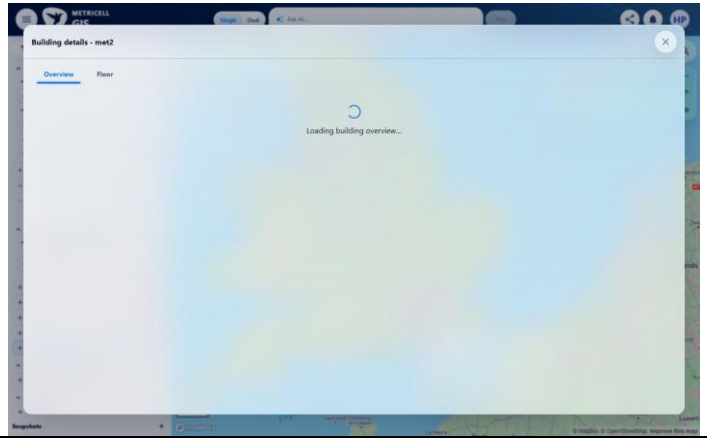

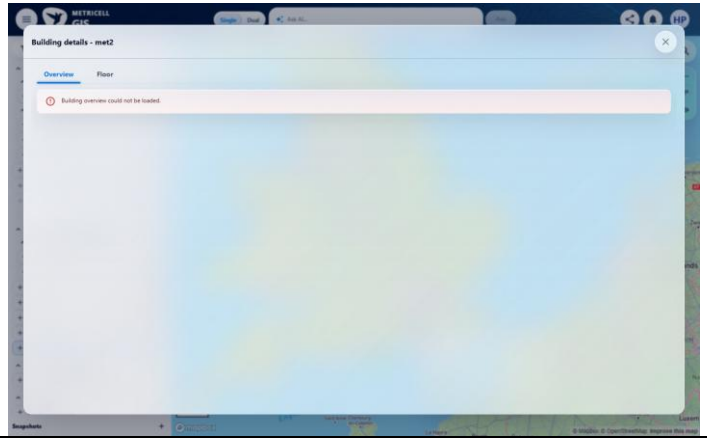

4 Test Cases

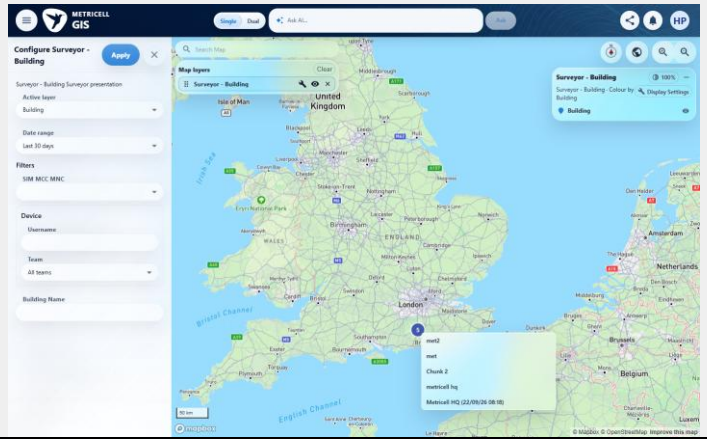

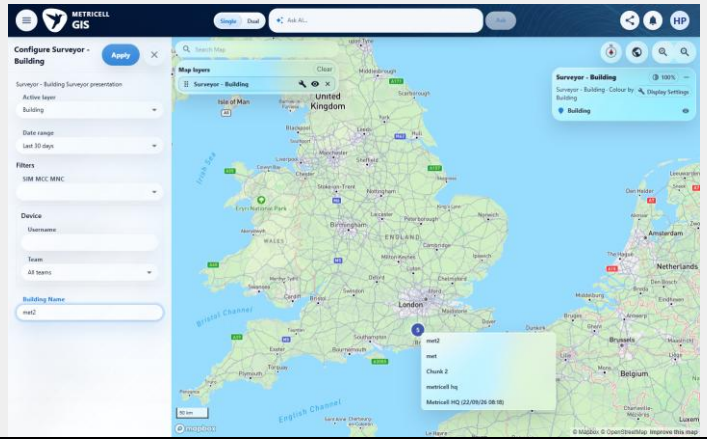

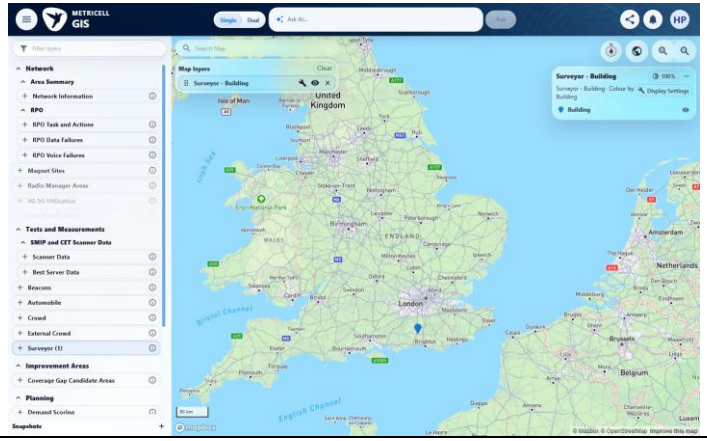

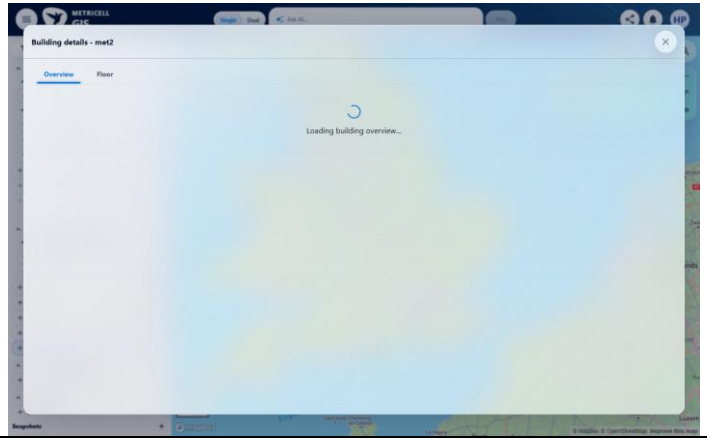

Each test maps to a criterion and decisive browser evidence. Inconclusive results are reported as Failed.

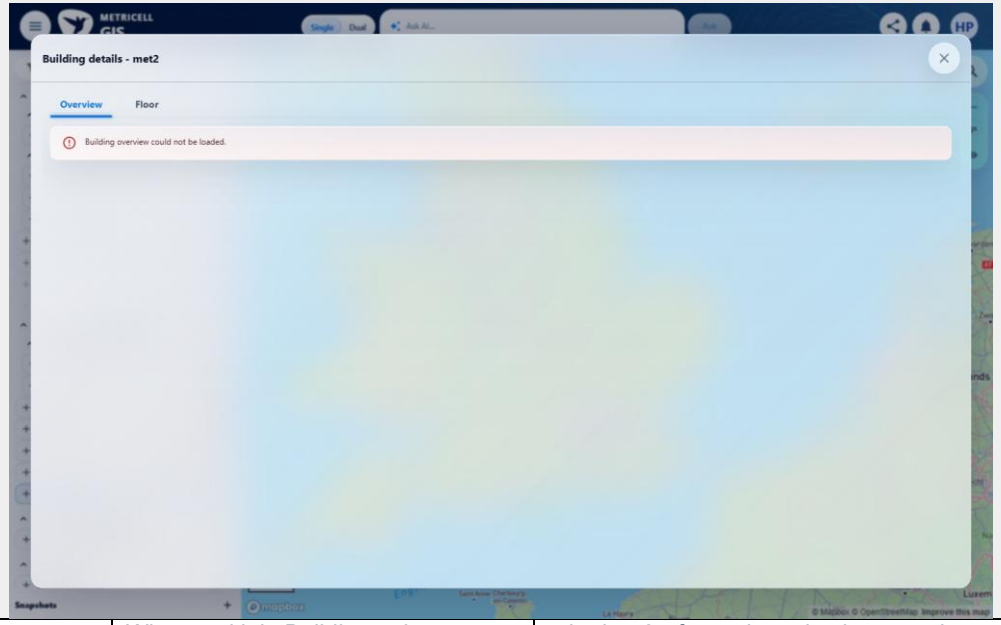

4.1 Tests

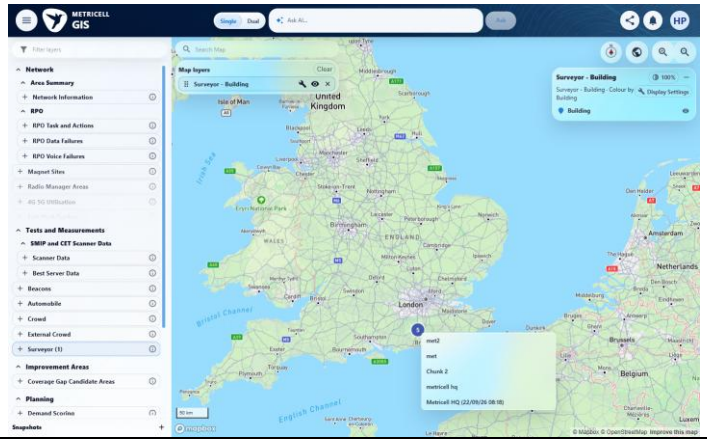

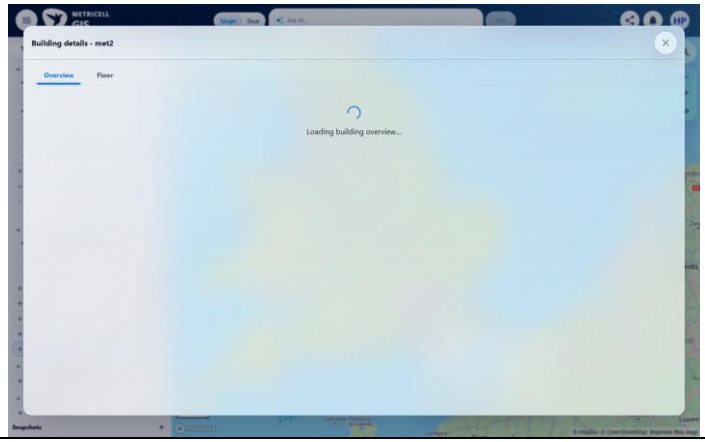

Preconditions:	V4 access and ticket conditions.	***Associated Requirements:***	Ticket criteria below.	Automation Notes:	Screenshots below each criterion; full log retained locally.

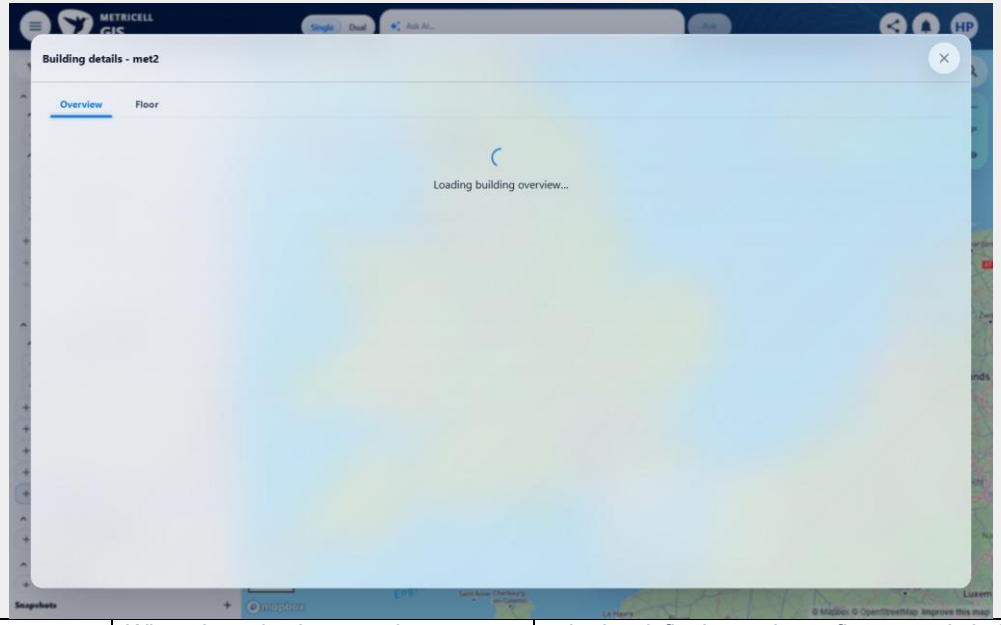

ID / Criterion	Criteria Tested	Expected Result	Actual Result / Evidence Path	Outcome
1.0.0	Selecting one Building point opens a separate dashboard for that building once its details load.	Selecting one Building point opens a separate dashboard for that building once its details load.	criterion-1-single-building-filter.png and criterion-1-single-building-map.png show met2 filtering and a single point; criterion-1-single-building-loading.png opens Building details - met2, but criterion-1-final.png shows Building overview could not be loaded. The reported repeated overview HTTP 500 prevents verification after details load. Evidence: E01, E02, E03, E04, E05, E06, E07, E08, E09	Blocked
Criterion 1 assessment: criterion-1-single-building-filter.png and criterion-1-single-building-map.png show met2 filtering and a single point; criterion-1-single-building-loading.png opens Building details - met2, but criterion-1-final.png shows Building overview could not be loaded. The reported repeated overview HTTP 500 prevents verification after details load. Testing notes: Single-point selection was established by the met2 Building Name filter. The Building details - met2 dashboard shell opened, but details never loaded: GET /api/platform/surveyor/building/overview for buildingId 99 returned HTTP 500, reproduced by a controlled fresh selection. Visible message: Building overview could not be loaded. This prevents verifying the criterion's loaded-details condition. Add unfiltered Surveyor - Building; select the five-point cluster and choose met2; observe loading, then the HTTP 500/error. Observe the fresh overview request return HTTP 500 and the final visible error; capture final URL, then remove the test layer.			

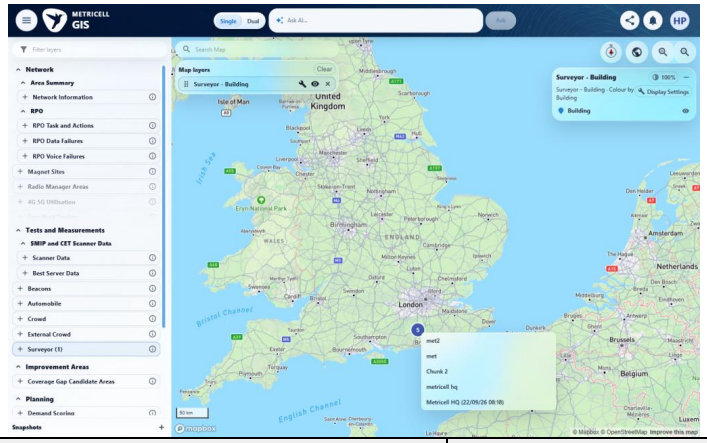

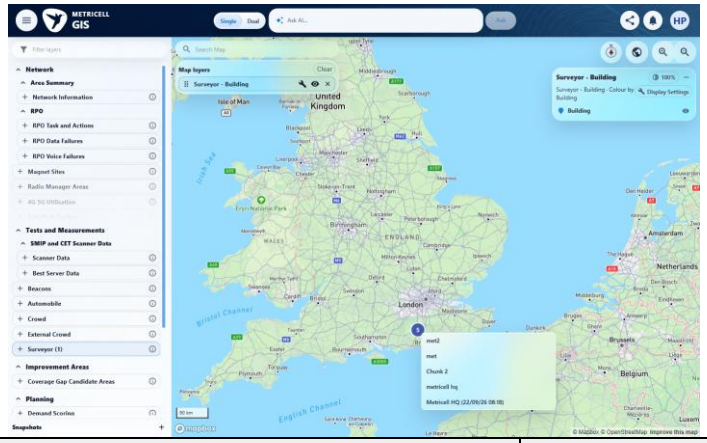

ID / Criterion	Criteria Tested	Expected Result	Actual Result / Evidence Path	Outcome
Criterion 1 evidence: Selecting one Building point opens a separate dashboard for that building once its details load. **Browser URL recorded after criterion: https://o2intelligence-v4-dev.metricell.com/gis** **E01 - After add building (criterion-1-after-add-building.png)**  **E02 - Building choice (criterion-1-building-choice.png)** 				
Criterion 1 continued: Selecting one Building point opens a separate dashboard for that building once its details load. **Browser URL recorded after criterion: https://o2intelligence-v4-dev.metricell.com/gis** **E03 - Selected building details (criterion-1-selected-building-details.png)**  **E04 - Overview error (criterion-1-overview-error.png)** 				

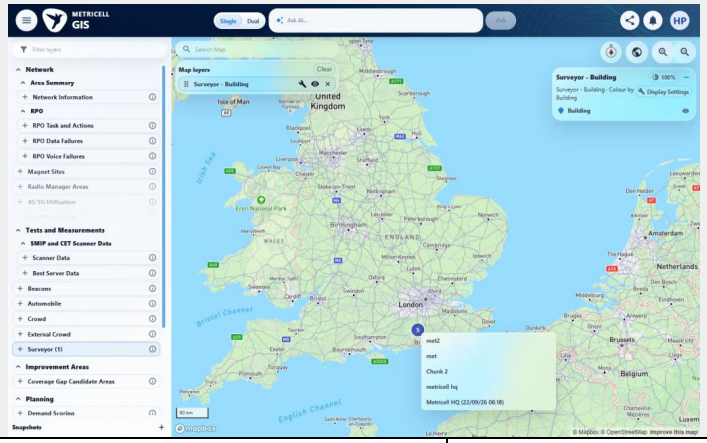

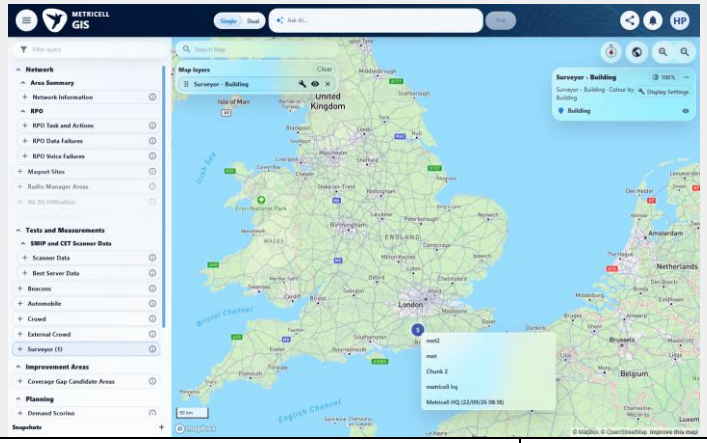

ID / Criterion	Criteria Tested	Expected Result	Actual Result / Evidence Path	Outcome
Criterion 1 continued: Selecting one Building point opens a separate dashboard for that building once its details load. **Browser URL recorded after criterion: https://o2intelligence-v4-dev.metricell.com/gis** **E05 - Before single building filter (criterion-1-before-single-building-filter.png)**  **E06 - Single building filter (criterion-1-single-building-filter.png)** 				
Criterion 1 continued: Selecting one Building point opens a separate dashboard for that building once its details load. **Browser URL recorded after criterion: https://o2intelligence-v4-dev.metricell.com/gis** **E07 - Single building map (criterion-1-single-building-map.png)**  **E08 - Single building loading (criterion-1-single-building-loading.png)** 				

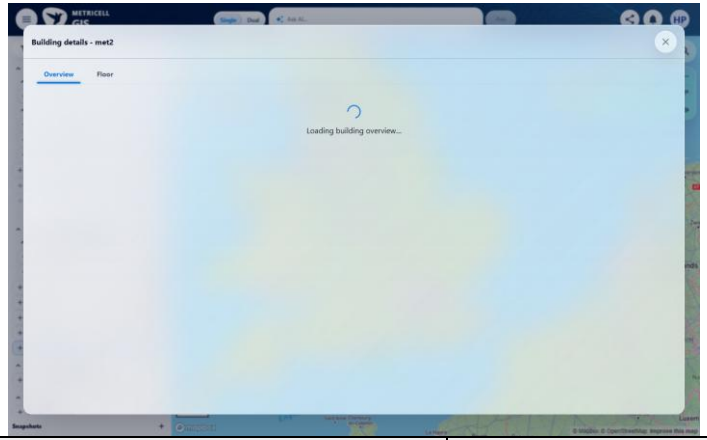

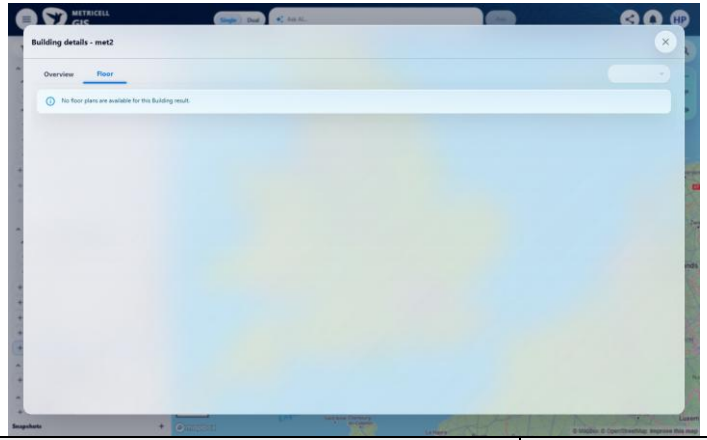

ID / Criterion	Criteria Tested	Expected Result	Actual Result / Evidence Path	Outcome
Criterion 1 continued: Selecting one Building point opens a separate dashboard for that building once its details load. **Browser URL recorded after criterion: https://o2intelligence-v4-dev.metricell.com/gis** **E09 - Final (criterion-1-final.png)**  				
2.0.0	When multiple Building points are selected at one map location, the user can choose which building dashboard to open.	When multiple Building points are selected at one map location, the user can choose which building dashboard to open.	criterion-2-after-point-selection.png shows a five-point cluster with five named building choices. criterion-2-chosen-building-dashboard.png and criterion-2-final.png show the separate Building details - met2 dashboard after choosing met2. The final capture is still loading; this proves choice and dashboard opening only, not successful detail retrieval. Evidence: E10, E11, E12	Passed
Criterion 2 assessment: criterion-2-after-point-selection.png shows a five-point cluster with five named building choices. criterion-2-chosen-building-dashboard.png and criterion-2-final.png show the separate Building details - met2 dashboard after choosing met2. The final capture is still loading; this proves choice and dashboard opening only, not successful detail retrieval. Testing notes: The five-point cluster offered named building choices. Selecting met2 opened the separate Building details - met2 dashboard dialog. This passes the choice/opening behavior only; its overview subsequently failed in the data service.				

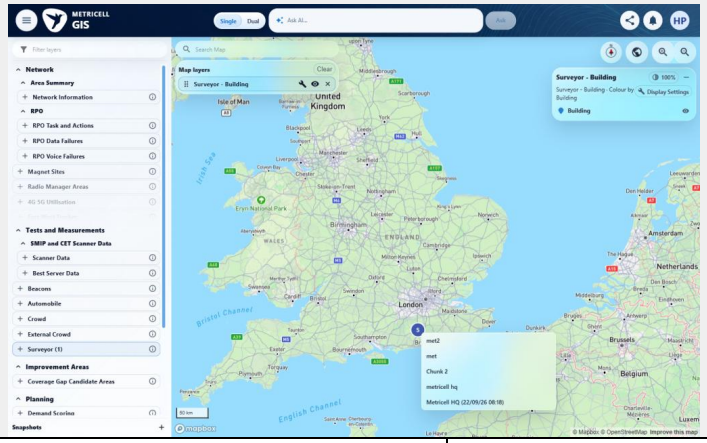

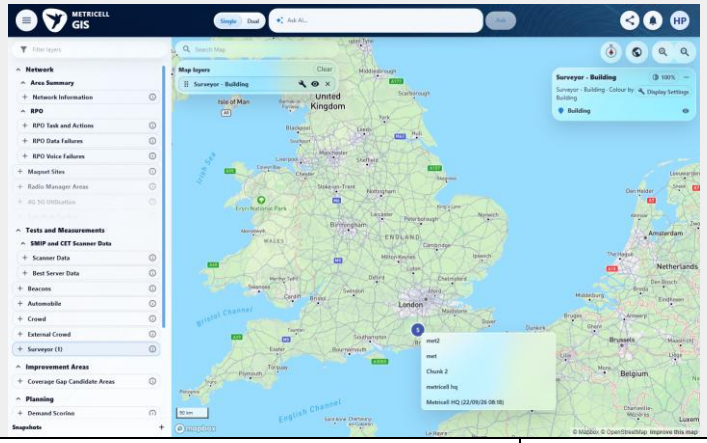

ID / Criterion	Criteria Tested	Expected Result	Actual Result / Evidence Path	Outcome
Criterion 2 evidence: When multiple Building points are selected at one map location, the user can choose which building dashboard to open. **Browser URL recorded after criterion: https://o2intelligence-v4-dev.metricell.com/gis** **E10 - After point selection (criterion-2-after-point-selection.png)**  **E11 - Chosen building dashboard (criterion-2-chosen-building-dashboard.png)** 				

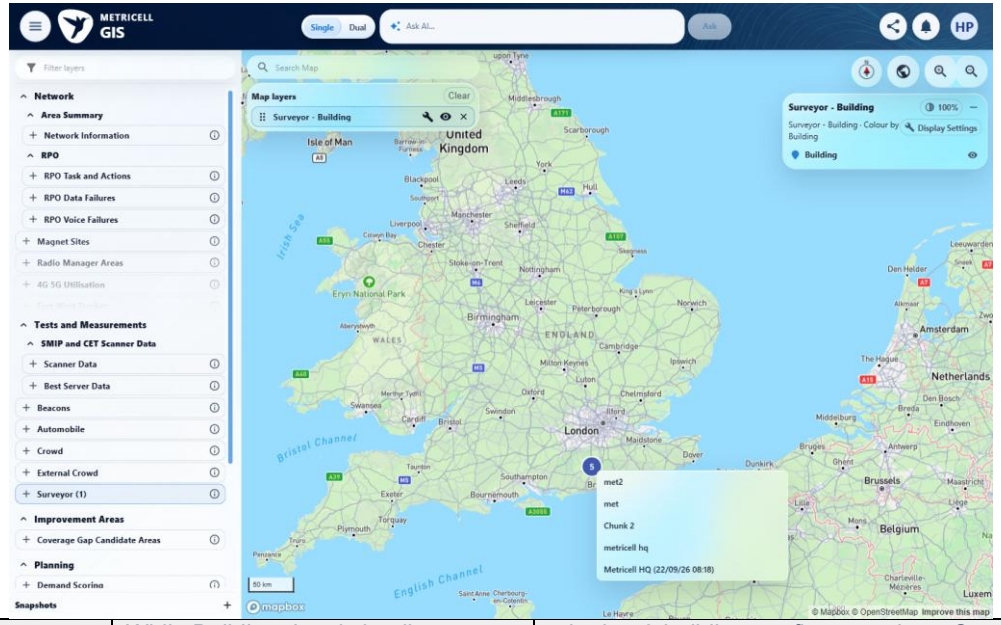

ID / Criterion	Criteria Tested	Expected Result	Actual Result / Evidence Path	Outcome
Criterion 2 continued: When multiple Building points are selected at one map location, the user can choose which building dashboard to open. **Browser URL recorded after criterion: https://o2intelligence-v4-dev.metricell.com/gis** **E12 - Final (criterion-2-final.png)**  				
3.0.0	When the selection contains too many Building points to identify a building, the user is prompted to zoom in or apply filters, and no ambiguous building dashboard opens.	When the selection contains too many Building points to identify a building, the user is prompted to zoom in or apply filters, and no ambiguous building dashboard opens.	criterion-3-final.png shows five named choices for the available cluster, not a too-many-points prompt. The tester could not establish a fixture or threshold exceeding that selection limit, so the required branch remains unavailable. Evidence: E02, E13	Blocked
Criterion 3 assessment: criterion-3-final.png shows five named choices for the available cluster, not a too-many-points prompt. The tester could not establish a fixture or threshold exceeding that selection limit, so the required branch remains unavailable. Testing notes: GET /api/platform/surveyor/building/points returned HTTP 200 with five Building points in Last 30 days. Their shared map cluster offered five choices. No fixture or defined threshold establishing a selection with too many Building points was available; that branch could not be exercised. No business data was created.				

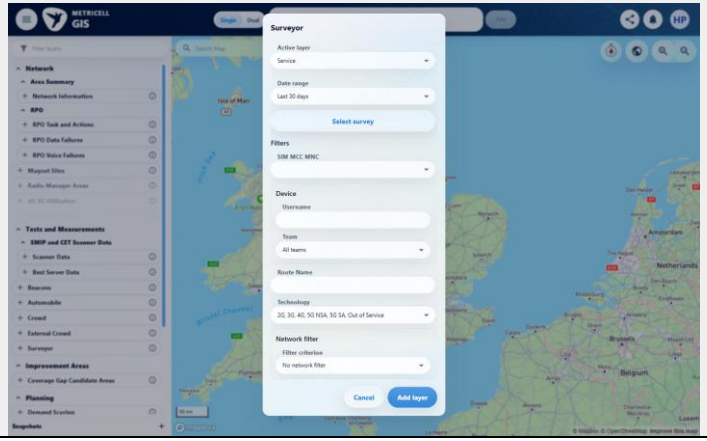

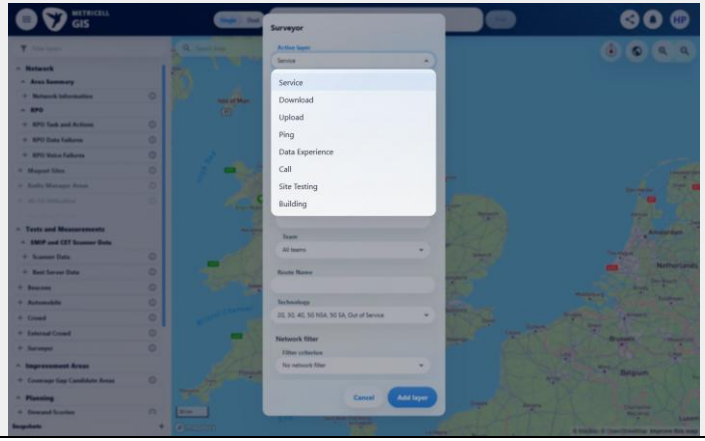

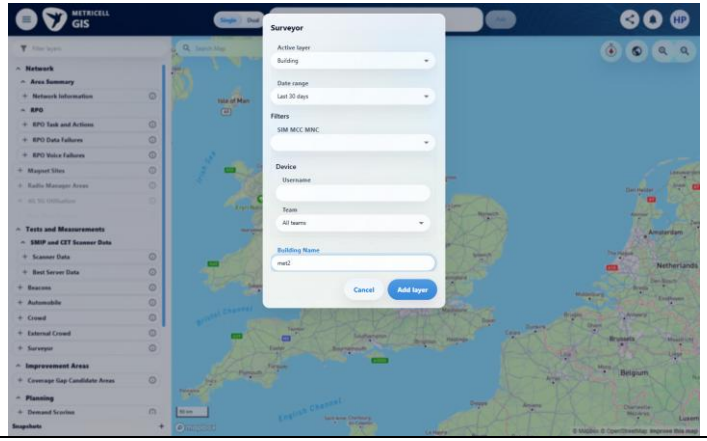

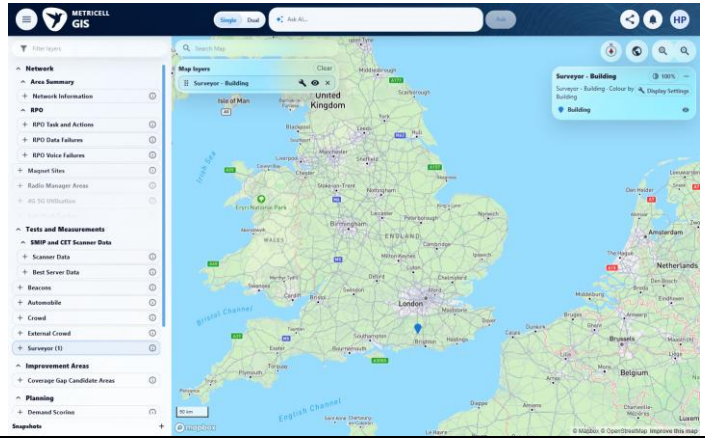

ID / Criterion	Criteria Tested	Expected Result	Actual Result / Evidence Path	Outcome
Criterion 3 evidence: When the selection contains too many Building points to identify a building, the user is prompted to zoom in or apply filters, and no ambiguous building dashboard opens. **Browser URL recorded after criterion: https://o2intelligence-v4-dev.metricell.com/gis** **E02 - After point selection (criterion-3-after-point-selection.png)**  **E13 - Final (criterion-3-final.png)** 				
4.0.0	When building information is available, the dashboard shows building and floorplan summary information in sortable and filterable tables.	When building information is available, the dashboard shows building and floorplan summary information in sortable and filterable tables.	criterion-4-final.png reaches the Building selection menu but contains no summary tables. The tester reports the repeated overview HTTP 500 established in criterion 1 and stopped this dependent check; available building information and sortable/filterable building and floorplan tables could not be tested. Evidence: E02, E13	Blocked
Criterion 4 assessment: criterion-4-final.png reaches the Building selection menu but contains no summary tables. The tester reports the repeated overview HTTP 500 established in criterion 1 and stopped this dependent check; available building information and sortable/filterable building and floorplan tables could not be tested. Testing notes: Building points and their selection menu are reachable, but the prerequisite available building information is not: the overview read for buildingId 99 returned HTTP 500 on the original and controlled fresh selection. Sortable/filterable summary tables could not be established. This criterion independently reached the map and building choices; the known failing overview request was not repeatedly issued for dependent table checks. Stop the dependent summary-table check at the known overview-service prerequisite failure rather than repeat the same failing request; capture own final map/choices and URL, then remove the test layer.				

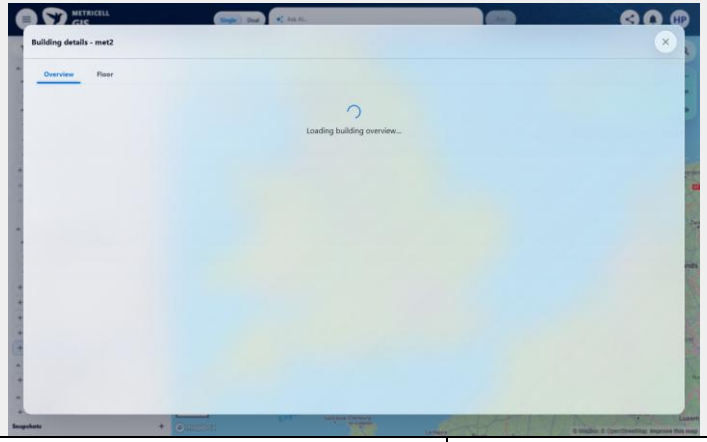

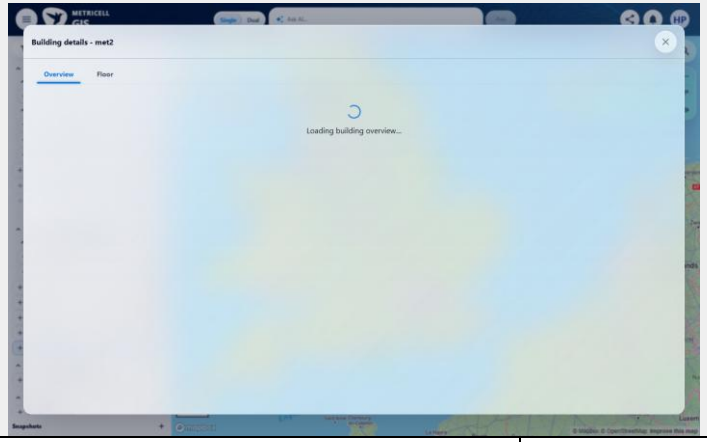

ID / Criterion	Criteria Tested	Expected Result	Actual Result / Evidence Path	Outcome
Criterion 4 evidence: When building information is available, the dashboard shows building and floorplan summary information in sortable and filterable tables. **Browser URL recorded after criterion: https://o2intelligence-v4-dev.metricell.com/gis** **E02 - After point selection (criterion-4-after-point-selection.png)**  **E13 - Final (criterion-4-final.png)** 				
5.0.0	When the building has floorplans, the dashboard displays their images and lets the user select a floorplan.	When the building has floorplans, the dashboard displays their images and lets the user select a floorplan.	criterion-5-after-point-selection.png shows the met2 dashboard loading; criterion-5-floor-loading.png and criterion-5-final.png already show No floor plans are available for this Building result, not a floor-loading state. No retrievable populated-floorplan fixture was established, so images and floorplan selection remain blocked. Evidence: E14, E15	Blocked
Criterion 5 assessment: criterion-5-after-point-selection.png shows the met2 dashboard loading; criterion-5-floor-loading.png and criterion-5-final.png already show No floor plans are available for this Building result, not a floor-loading state. No retrievable populated-floorplan fixture was established, so images and floorplan selection remain blocked.				

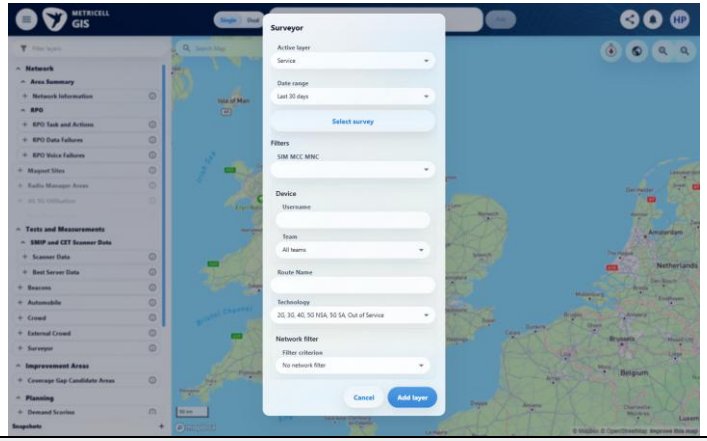

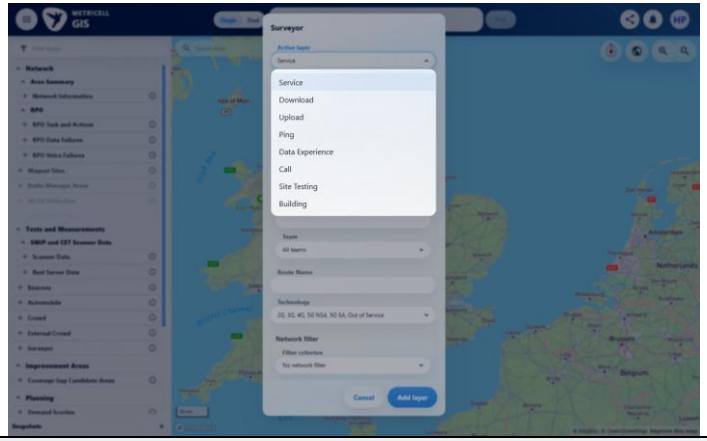

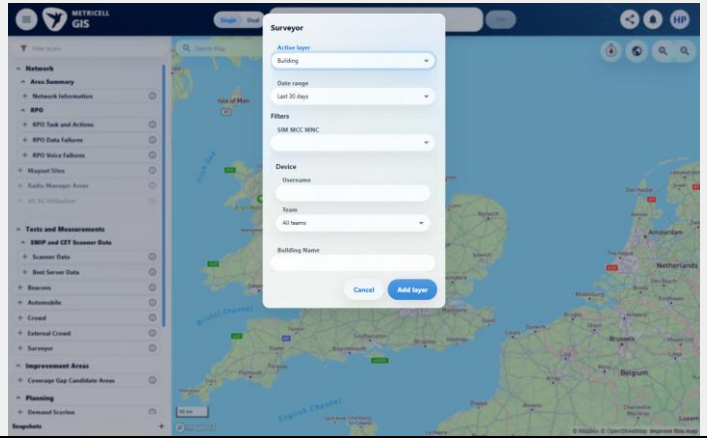

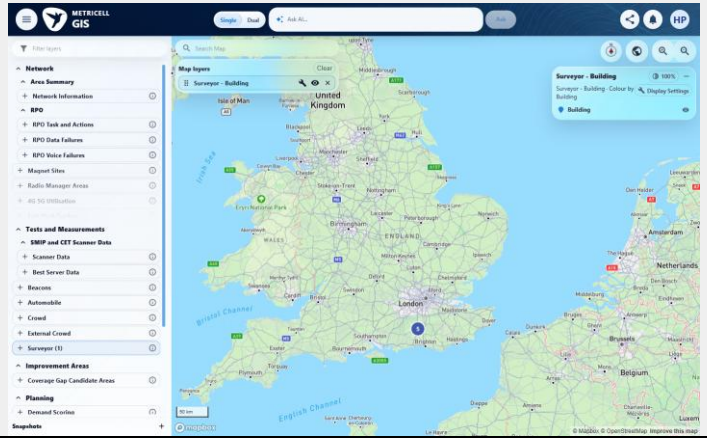

ID / Criterion	Criteria Tested	Expected Result	Actual Result / Evidence Path	Outcome
Criterion 5 evidence: When the building has floorplans, the dashboard displays their images and lets the user select a floorplan. **Browser URL recorded after criterion: https://o2intelligence-v4-dev.metricell.com/gis** **E14 - After point selection (criterion-5-after-point-selection.png)**  **E15 - Final (criterion-5-final.png)**  				
6.0.0	Selecting a floorplan displays its image with the associated survey points overlaid.	Selecting a floorplan displays its image with the associated survey points overlaid.	criterion-6-final.png reaches only the Building choices. The tester could not establish a retrievable floorplan fixture; no floorplan image, selection or associated survey-point overlay is demonstrated. Evidence: E02, E13	Blocked
Criterion 6 assessment: criterion-6-final.png reaches only the Building choices. The tester could not establish a retrievable floorplan fixture; no floorplan image, selection or associated survey-point overlay is demonstrated. Testing notes: No verified building-with-floorplans fixture could be established: met2's Floor tab offered no floorplans, while its overview read failed HTTP 500. Independently reached the Building map and selection choices for this criterion; did not repeat the known failing detail request or invent a floorplan. Image selection and survey-point overlay remain untested.				

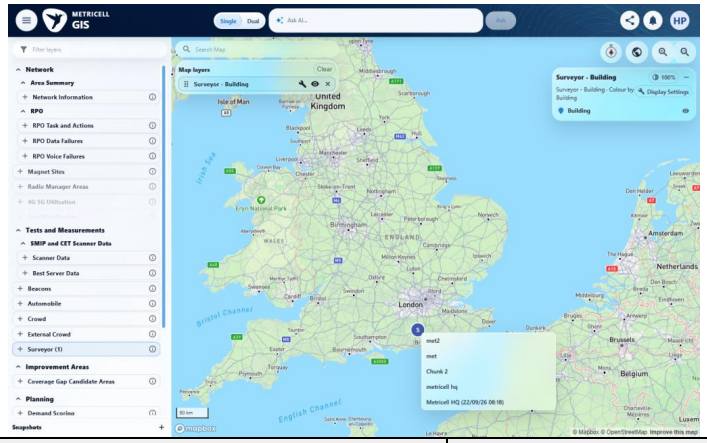

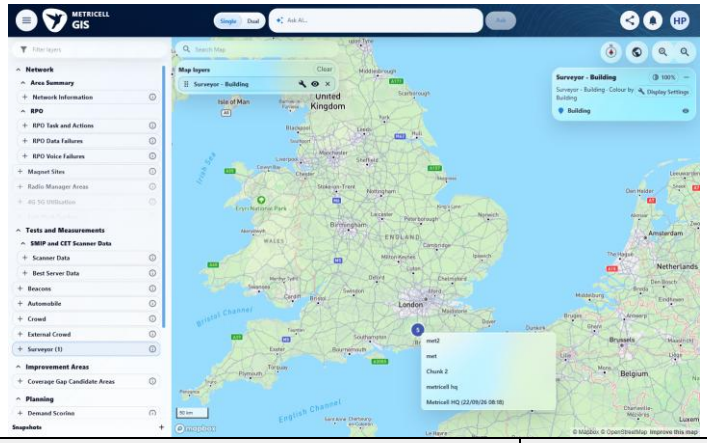

ID / Criterion	Criteria Tested	Expected Result	Actual Result / Evidence Path	Outcome
Criterion 6 evidence: Selecting a floorplan displays its image with the associated survey points overlaid. **Browser URL recorded after criterion: https://o2intelligence-v4-dev.metricell.com/gis** **E02 - After point selection (criterion-6-after-point-selection.png)**  **E13 - Final (criterion-6-final.png)** 				
7.0.0	When the building has no floorplans, the dashboard displays available building details without an empty floorplan image area.	When the building has no floorplans, the dashboard displays available building details without an empty floorplan image area.	criterion-7-final.png reaches only the Building choices. No verified building with both no floorplans and available details was established; the met2 overview service failure prevents checking available details and the required absence of an empty floorplan image area. Evidence: E02	Blocked
Criterion 7 assessment: criterion-7-final.png reaches only the Building choices. No verified building with both no floorplans and available details was established; the met2 overview service failure prevents checking available details and the required absence of an empty floorplan image area. Testing notes: A verified building with no floorplans AND available building details could not be established. The prior met2 Floor display alone is insufficient to prove an authoritative no-floorplans record because overview data fails HTTP 500. Independently reached Building points/choices; did not repeat the same failing detail request. The available-details requirement remains blocked.				

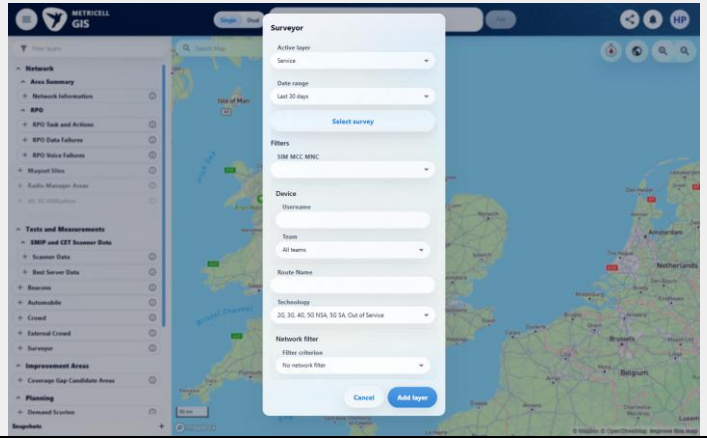

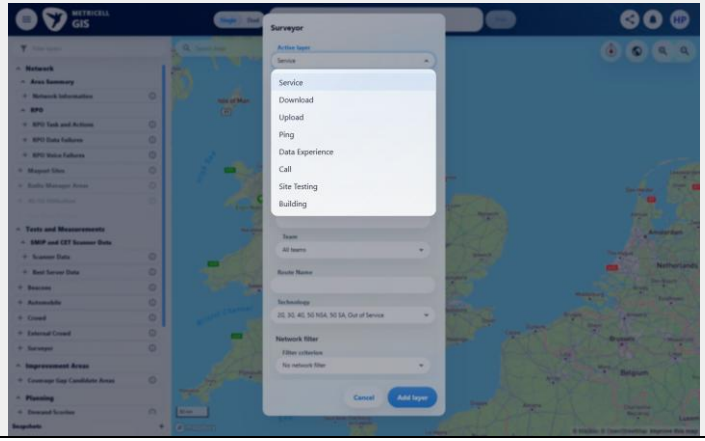

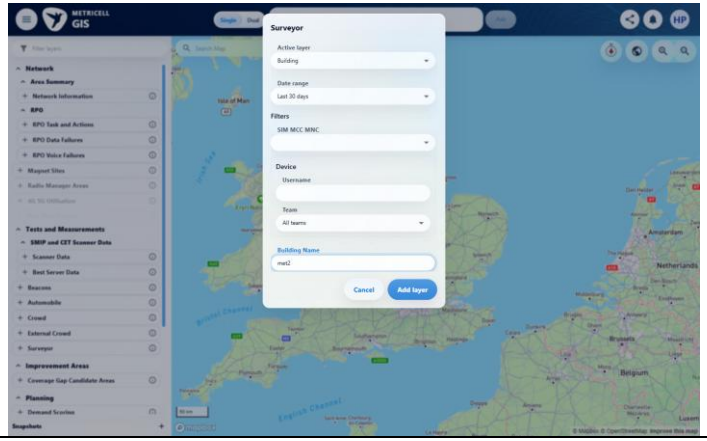

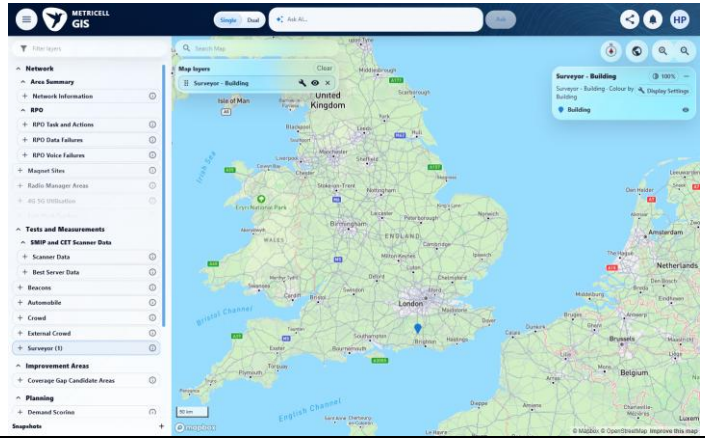

ID / Criterion	Criteria Tested	Expected Result	Actual Result / Evidence Path	Outcome
Criterion 7 evidence: When the building has no floorplans, the dashboard displays available building details without an empty floorplan image area. **Browser URL recorded after criterion: https://o2intelligence-v4-dev.metricell.com/gis** **E02 - Final (criterion-7-final.png)** 				
8.0.0	While Building data is loading, a loading state is displayed.	While Building data is loading, a loading state is displayed.	criterion-8-building-config.png selects Surveyor > Building filtered to met2; criterion-8-building-map.png shows its single point. criterion-8-after-point-selection.png and criterion-8-final.png directly show Loading building overview... with a spinner in Building details - met2 during the reported genuine read. Successful retrieval is outside this loading assertion. Evidence: E16, E17, E18, E19, E20, E21	Passed
Criterion 8 assessment: criterion-8-building-config.png selects Surveyor > Building filtered to met2; criterion-8-building-map.png shows its single point. criterion-8-after-point-selection.png and criterion-8-final.png directly show Loading building overview... with a spinner in Building details - met2 during the reported genuine read. Successful retrieval is outside this loading assertion.				

ID / Criterion	Criteria Tested	Expected Result	Actual Result / Evidence Path	Outcome
Criterion 8 evidence: While Building data is loading, a loading state is displayed. **Browser URL recorded after criterion: https://o2intelligence-v4-dev.metricell.com/gis** **E16 - Surveyor config (criterion-8-surveyor-config.png)**  **E17 - Active layer options (criterion-8-active-layer-options.png)** 				
Criterion 8 continued: While Building data is loading, a loading state is displayed. **Browser URL recorded after criterion: https://o2intelligence-v4-dev.metricell.com/gis** **E18 - Building config (criterion-8-building-config.png)**  **E19 - Building map (criterion-8-building-map.png)** 				

ID / Criterion	Criteria Tested	Expected Result	Actual Result / Evidence Path	Outcome
Criterion 8 continued: While Building data is loading, a loading state is displayed. **Browser URL recorded after criterion: https://o2intelligence-v4-dev.metricell.com/gis** **E20 - After point selection (criterion-8-after-point-selection.png)**  **E21 - Final (criterion-8-final.png)**  				
9.0.0	When Building data is unavailable, a no-data state is displayed.	When Building data is unavailable, a no-data state is displayed.	criterion-9-final.png shows populated Building choices, not settled unavailable overview data. No authentic no-data fixture or authoritative empty overview contract was established; the reported HTTP 500 is an error rather than an empty response, so the no-data branch remains blocked. Evidence: E16, E22, E23, E01, E02, E13	Blocked
Criterion 9 assessment: criterion-9-final.png shows populated Building choices, not settled unavailable overview data. No authentic no-data fixture or authoritative empty overview contract was established; the reported HTTP 500 is an error rather than an empty response, so the no-data branch remains blocked. Testing notes: No authentic unavailable-Building/no-data fixture or authoritative empty overview response contract was supplied or established. The real points response is populated (five points), and overview failure is HTTP 500, not settled empty data. Independently reached Building points/choices. No-data simulation was not performed because an empty contract and valid baseline record could not be established.				

ID / Criterion	Criteria Tested	Expected Result	Actual Result / Evidence Path	Outcome
Criterion 9 evidence: When Building data is unavailable, a no-data state is displayed. **Browser URL recorded after criterion: https://o2intelligence-v4-dev.metricell.com/gis** **E16 - Surveyor config (criterion-9-surveyor-config.png)**  		**E22 - Active layer options (criterion-9-active-layer-options.png)**  	
Criterion 9 continued: When Building data is unavailable, a no-data state is displayed. **Browser URL recorded after criterion: https://o2intelligence-v4-dev.metricell.com/gis** **E23 - Building config (criterion-9-building-config.png)**  		**E01 - Building map (criterion-9-building-map.png)**  	

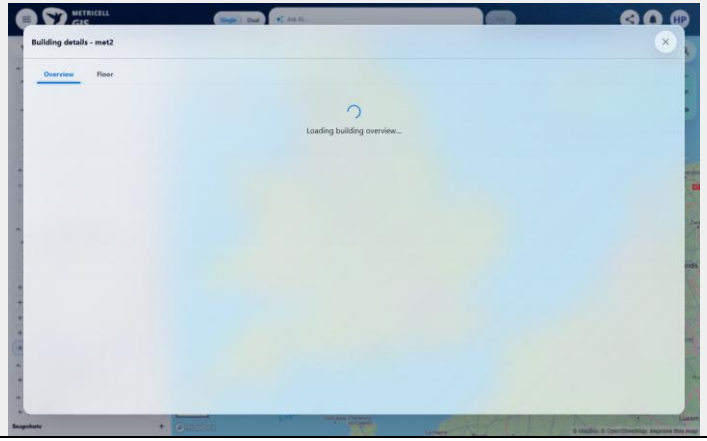

ID / Criterion	Criteria Tested	Expected Result	Actual Result / Evidence Path	Outcome
Criterion 9 continued: When Building data is unavailable, a no-data state is displayed. **Browser URL recorded after criterion: https://o2intelligence-v4-dev.metricell.com/gis** **E02 - After point selection (criterion-9-after-point-selection.png)**  **E13 - Final (criterion-9-final.png)** 				
10.0.0	When Building data fails to load, an error state is displayed without incorrect building data.	When Building data fails to load, an error state is displayed without incorrect building data.	criterion-10-after-point-selection.png shows the selected met2 overview loading; criterion-10-final.png shows Building overview could not be loaded with no building tables, floorplan images or incorrect record details in the content area. This supports the visible error state for the reported real overview HTTP 500; no simulated response or cross-record stale-data scenario is claimed. Evidence: E16, E17, E18, E19, E24, E09	Passed
Criterion 10 assessment: criterion-10-after-point-selection.png shows the selected met2 overview loading; criterion-10-final.png shows Building overview could not be loaded with no building tables, floorplan images or incorrect record details in the content area. This supports the visible error state for the reported real overview HTTP 500; no simulated response or cross-record stale-data scenario is claimed. Testing notes: A real GET /api/platform/surveyor/building/overview for met2 (buildingId 99) returned HTTP 500. After the live loading state settled, the selected dashboard displayed Building overview could not be loaded. Its overview content area contained no building tables, floorplan images or other building's details. No mocking was used. This verifies the visible error state for this record; no cross-record stale-data scenario is claimed. Wait for the genuine overview read to settle; verify HTTP 500 and the visible Building overview could not be loaded message. Capture the error assertion and URL before closing the dialog and removing the test layer.				

ID / Criterion	Criteria Tested	Expected Result	Actual Result / Evidence Path	Outcome
Criterion 10 evidence: When Building data fails to load, an error state is displayed without incorrect building data. **Browser URL recorded after criterion: https://o2intelligence-v4-dev.metricell.com/gis** **E16 - Surveyor config (criterion-10-surveyor-config.png)**  **E17 - Active layer options (criterion-10-active-layer-options.png)** 				
Criterion 10 continued: When Building data fails to load, an error state is displayed without incorrect building data. **Browser URL recorded after criterion: https://o2intelligence-v4-dev.metricell.com/gis** **E18 - Building config (criterion-10-building-config.png)**  **E19 - Building map (criterion-10-building-map.png)** 				

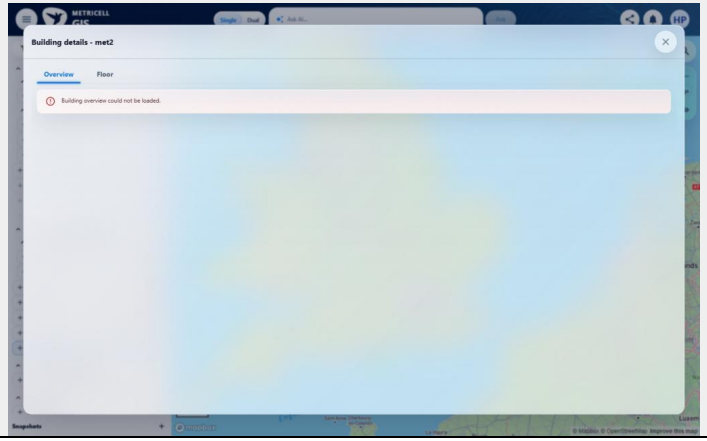

ID / Criterion	Criteria Tested	Expected Result	Actual Result / Evidence Path	Outcome

Criterion 10 continued: When Building data fails to load, an error state is displayed without incorrect building data.
Browser URL recorded after criterion: https://o2intelligence-v4-dev.metricell.com/gis

E24 - After point selection (criterion-10-after-point-selection.png)

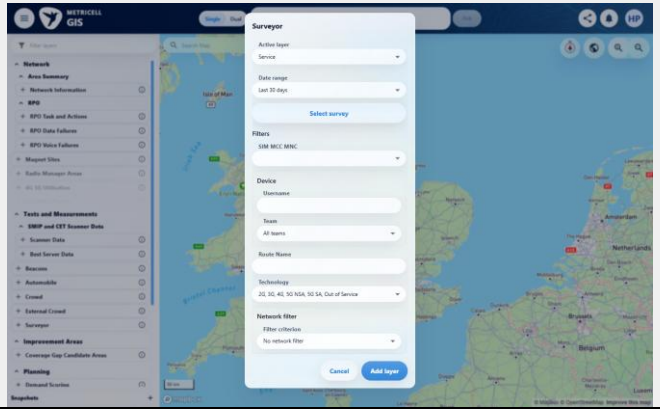

E09 - Final (criterion-10-final.png)

Supporting setup captures - full attempt evidence remains in the local evidence folder

E25 - Surveyor config (criterion-1-surveyor-config.png)

metricell
Better Connected

About Metricell

Metricell is on a mission to deliver connectivity. We work with our customers to design, deliver and manage wireless communication networks – with a shared ambition of achieving flawless network experience. We've been responsible for many first-to-market products, and our technology is characterised by the relentless pursuit of automation and digitalisation.

Our geospatial intelligence tools traverse a wide variety of business processes – from Test & Measurement to Customer Experience Management – and we're pioneers in Crowdsourcing and Digital Self Care. Our technology is today in use by a range of customers; thousands of their personnel; and millions of subscribers worldwide.

Find out more at www.metricell.com
