3 Test Summary

Area of test	Pass (Y/N)	Fail (Y/N)	Blocked (Y/N)	Defect No
1. Before selecting the MS Teams Call layer, the map shows no MS Teams Call test-result points.	Y	N	N	0
2. When the user selects the MS Teams Call layer and authorised matching results are available, each matching result is shown as a selectable map point.	N	Y	N	0
3. For a displayed MS Teams Call point with Poor Quality 0–0.99, its map colour is Green.	N	Y	N	0
4. For a displayed MS Teams Call point with Poor Quality 1–9.99, its map colour is Yellow.	Y	N	N	0
5. For a displayed MS Teams Call point with Poor Quality 10–24.99, its map colour is Amber.	Y	N	N	0
6. For a displayed MS Teams Call point with Poor Quality 25 or greater, its map colour is Red.	Y	N	N	0
7. When the user selects a map point and its details load successfully, the details dialog displays Test ID, Test Result, Connection Time, Call Duration, Poor Quality, MSISDN and Test Technologies.	Y	N	N	0
8. When the user selects a map point and its details load successfully, the details dialog displays signal and download charts and shows handover markers when available.	Y	N	N	0
9. When the user selects a map point and its details load successfully, the details dialog displays a detailed-sample table that omits label, latitude, longitude and handover-only columns.	Y	N	N	0
10. When detailed samples are displayed, sorting a supported column changes their displayed order to match the selected sort.	Y	N	N	0
11. When detailed samples are displayed, filtering a supported column limits the displayed samples to those matching the filter.	N	Y	N	1
12. When the user exports a selected test as CSV, the exported CSV contains data for that selected test.	Y	N	N	0
13. When a zero-duration result is selected, its details dialog does not display stale or misleading data.	N	N	Y	0
14. When details for a selected result fail to load, the dialog does not display stale or misleading data.	Y	N	N	0

4 Test Cases

Each test maps to a criterion and decisive browser evidence. Inconclusive results are reported as Failed.

2.0.0	When the user selects the MS Teams Call layer and authorised matching results are available, each matching result is shown as a selectable map point.	When the user selects the MS Teams Call layer and authorised matching results are available, each matching result is shown as a selectable map point.	criterion-2-selected-layer-map-3c79e3ab-4fdf-49a8-a107-23636a4fe141.png, criterion-2-selected-cluster-a88db975-38e2-45dd-bef4-f21fe1f62255.png, criterion-2-final-b15b5ff7-d56f-49eb-8003-264d0814c35c.png show actual Automobile MS Teams result symbols, a five-member cluster and an opened MS Teams detail. Recorded /api/platform/automobile/ms-teams-call requests corroborate provenance. Every result/member in a defined genuine scope was not reconciled or normally selected; full selectability remains unverified. The retained Call detail in selected-layer-map is unrelated. 11.0.0	When detailed samples are displayed, filtering a supported column limits the displayed samples to those matching the filter.	When detailed samples are displayed, filtering a supported column limits the displayed samples to those matching the filter.	criterion-11-supplement-final-a6141306-3a6a-49f9-9767-0f08ad05a0d6.png shows the actual individual MS Teams detailed-sample table, sortable headers, pagination and export control. SHA-256-verified criterion-11-controls.json inventories all eleven headers and the table toolbar: sorting controls only, no sample/column filter or filter menu; the only visible filter is the unrelated layer catalogue input. This complete criterion-owned DOM inventory corroborates the visible view and demonstrates the required filtering control is absent. Evidence: E38	Failed

Criterion 11 evidence: When detailed samples are displayed, filtering a supported column limits the displayed samples to those matching the filter.

12.0.0	When the user exports a selected test as CSV, the exported CSV contains data for that selected test.	When the user exports a selected test as CSV, the exported CSV contains data for that selected test.	criterion-12-supplement-final-ada45017-719b-4d93-a74b-f69149744fc3.png identifies the MS Teams selected-record sample view and normal Export CSV control. SHA-256-verified private criterion-12-export.csv and criterion-12-response.json independently reconcile all 457 rows to genuine selected test 132124168: timestamps, technology, site/cell, signal, RSRQ and SNR, including 215 empty/null SNR pairs. Rates match after bytes/s × 8/1000 to Kbps and sizes after bytes /1024 to response kB. The CSV contains the selected test's data; raw files remain private. Evidence: E39	Passed

Criterion 12 evidence: When the user exports a selected test as CSV, the exported CSV contains data for that selected test.

13.0.0	When a zero-duration result is selected, its details dialog does not display stale or misleading data.	When a zero-duration result is selected, its details dialog does not display stale or misleading data.	criterion-13-supplement-final-26f79388-68a3-43b0-8e5b-fbe4d29157f0.png shows the complete bounded two-row MS Teams cluster, both with Call Duration 120 s. No genuine zero-duration fixture was supplied or located in that checked scope, so selecting such a result and verifying stale-data protection could not be completed. This is not evidence of dataset-wide absence or a product defect. Evidence: E40	Blocked
Criterion 13 assessment: Testing notes: Captured the bounded fixture search. No qualifying zero-duration identity was supplied or located in this checked scope; did not claim a product failure or a zero-duration pass.

14.0.0	When details for a selected result fail to load, the dialog does not display stale or misleading data.	When details for a selected result fail to load, the dialog does not display stale or misleading data.	The recorded check satisfied the criterion; see the assessment below. Evidence: E41, E42, E43	Passed

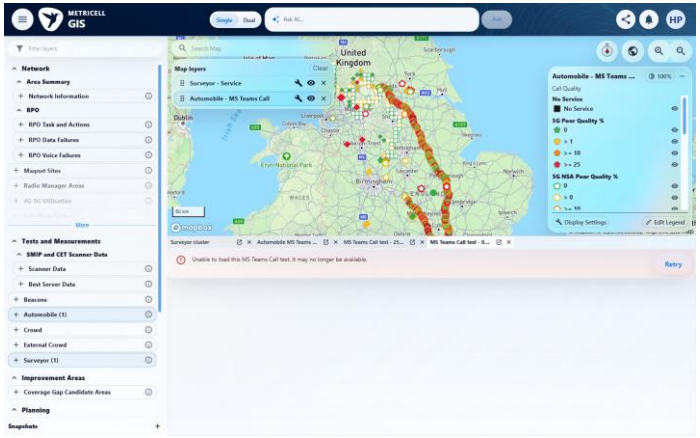

Criterion 14 assessment: SIMULATED UI STATE: on configured development https://o2intelligence-v4-dev.metricell.com/gis, the recorded browser-only exact-URL GET handler injected HTTP 503 for /api/platform/automobile/ms-teams-call/tests/131879769 after genuine test 132124168 loaded. Failure-status provenance is RFC 9110 section 15.6.4; the synthetic non-success body makes no project-schema claim. criterion-14-supplement-before-385e41bf-2bbe-484a-abab-93892b5a257e.png, criterion-14-supplement-final-3830d827-7d85-499f-9fb8-7df1ed351058.png, criterion-14-supplement-restored-672b6bc0-3229-473e-831d-a45622987a71.png show the distinct 25 August 11:33:08 populated baseline, an explicit MS Teams load error with Retry and no stale summary/charts/samples, then genuine recovery to the 4 August 11:41:02 record. Steps record one intercepted read, removal of the exact handler, genuine HTTP 200 on Retry, verification that the handler was absent and cleanup of owned tabs/layer with restoration of the pre-existing Surveyor session/camera. This error-only criterion does not require a loading transition or project-specific error body. The visible client error and recovery pass; this is not a naturally occurring backend failure or an end-to-end backend integration test.

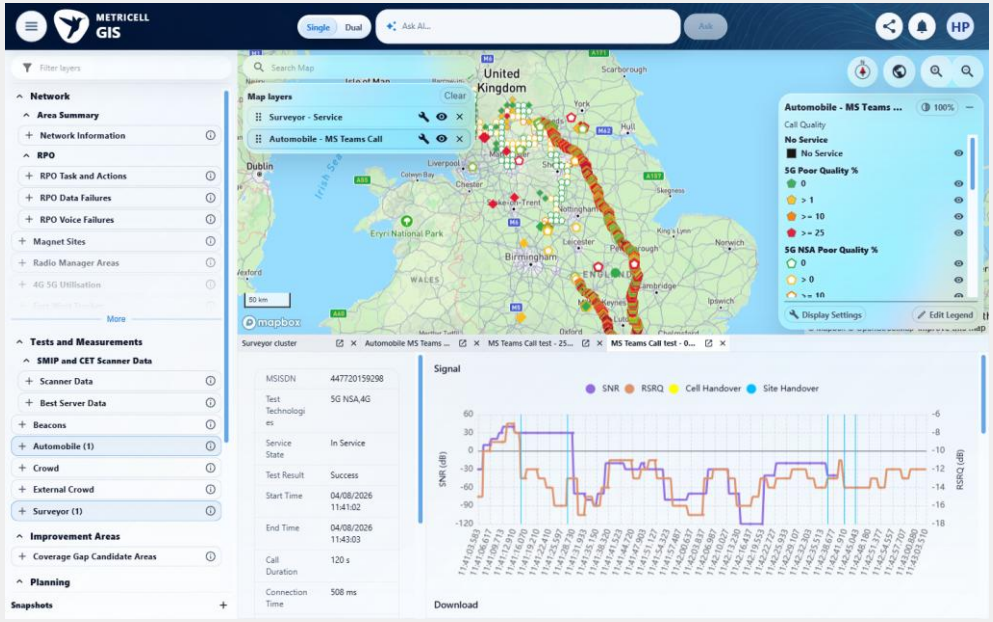

Criterion 14 evidence: When details for a selected result fail to load, the dialog does not display stale or misleading data.
