3 Test Summary

Area of test	Pass (Y/N)	Fail (Y/N)	Blocked (Y/N)	Defect No
1. Before selecting the MS Teams Call layer, the map shows no MS Teams Call test-result points.	Y	N	N	0
2. When the user selects the MS Teams Call layer and authorised matching results are available, each matching result is shown as a selectable map point.	Y	N	N	0
3. For a displayed MS Teams Call point with Poor Quality 0–0.99, its map colour is Green.	Y	N	N	0
4. For a displayed MS Teams Call point with Poor Quality 1–9.99, its map colour is Yellow.	N	Y	N	0
5. For a displayed MS Teams Call point with Poor Quality 10–24.99, its map colour is Amber.	N	Y	N	0
6. For a displayed MS Teams Call point with Poor Quality 25 or greater, its map colour is Red.	N	Y	N	0
7. When the user selects a map point and its details load successfully, the details dialog displays Test ID, Test Result, Connection Time, Call Duration, Poor Quality, MSISDN and Test Technologies.	Y	N	N	0
8. When the user selects a map point and its details load successfully, the details dialog displays signal and download charts and shows handover markers when available.	Y	N	N	0
9. When the user selects a map point and its details load successfully, the details dialog displays a detailed-sample table that omits label, latitude, longitude and handover-only columns.	Y	N	N	0
10. When detailed samples are displayed, sorting a supported column changes their displayed order to match the selected sort.	Y	N	N	0
11. When detailed samples are displayed, filtering a supported column limits the displayed samples to those matching the filter.	N	Y	N	1
12. When the user exports a selected test as CSV, the exported CSV contains data for that selected test.	Y	N	N	0
13. When a zero-duration result is selected, its details dialog does not display stale or misleading data.	N	N	Y	0
14. When details for a selected result fail to load, the dialog does not display stale or misleading data.	Y	N	N	0

4 Test Cases

Each test maps to a criterion and decisive browser evidence. Inconclusive results are reported as Failed.

Existing Call symbols are not MS Teams points. Evidence: E01, E02, E03	Passed

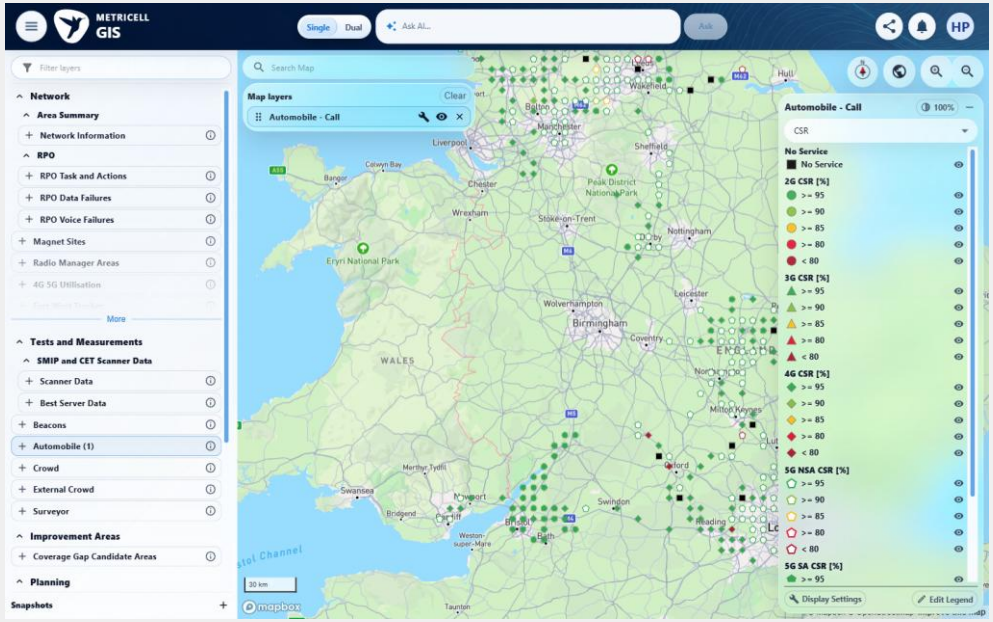

Criterion 1 evidence: Before selecting the MS Teams Call layer, the map shows no MS Teams Call test-result points.

2.0.0	When the user selects the MS Teams Call layer and authorised matching results are available, each matching result is shown as a selectable map point.	When the user selects the MS Teams Call layer and authorised matching results are available, each matching result is shown as a selectable map point.	criterion-2-focused-final-scope-47a396a1-b79f-49a3-9bb1-c4e09dcd584d.png, criterion-2-focused-plotted-3c58988e-5f2a-4ad7-9e24-6d4a0fc87cc5.png, criterion-2-focused-final-425b175d-f0da-4128-bc02-7064eb3784d1.png identify Automobile - MS Teams Call, the actual single green outlined result near (799,309), and normally opened test 132121102. The scope capture retains an unrelated Surveyor cluster and broader Surveyor symbols; focused-plotted hides that layer and establishes the actual bounded MS Teams result. SHA-256-verified criterion-2-bounded-points.json, criterion-2-bounded-members.json and criterion-2-selected-response.json reconcile the complete one-aggregate/one-member scope and matching detail identity (1/1), corroborated by criterion-2-reconciliation.json and recorded normal pointer selection. Scope is Site 5201, API 25 August 2026 11:33–11:36 UTC and documented viewport; this establishes supplied bounded-fixture completeness, not deployment-wide coverage. Evidence: E04, E05, E06	Passed

Hash-verified criterion-3-bounded-points.json, criterion-3-bounded-members.json and criterion-3-selected-response.json reconcile the single aggregate 864691673379112247 at 0.437636761487964% with its only member and normally opened detail; both aggregate and displayed member values are within 0–0.99. criterion-3-point-identity.json corroborates the saved-image association and native green outline. This is an interior-band example; interval endpoints were not separately sampled. Evidence: E07, E08, E09	Passed

The recorded selection and numeric point observation are narrative only: no criterion-owned genuine point/member/detail response bodies are supplied as supportingEvidence to audit the numeric marker association required by the brief. The visible summary supports the member value, but does not independently reconcile it to the plotted aggregate. Association remains Unverified, not a demonstrated colour defect. Evidence: E10, E11, E12	Failed

11.0.0	When detailed samples are displayed, filtering a supported column limits the displayed samples to those matching the filter.	When detailed samples are displayed, filtering a supported column limits the displayed samples to those matching the filter.	criterion-11-supplement-final-a6141306-3a6a-49f9-9767-0f08ad05a0d6.png shows the individual MS Teams detailed-sample table with sorting and CSV export. SHA-256-verified criterion-11-controls.json enumerates all eleven headers and toolbar controls, showing sorting only and no supported sample/column filter or filter menu; the visible Filter layers input belongs to the catalogue. The complete criterion-owned inventory corroborates absence in the actual required view, so the mandatory filtering capability fails. Evidence: E34	Failed

Criterion 11 evidence: When detailed samples are displayed, filtering a supported column limits the displayed samples to those matching the filter.

12.0.0	When the user exports a selected test as CSV, the exported CSV contains data for that selected test.	When the user exports a selected test as CSV, the exported CSV contains data for that selected test.	criterion-12-supplement-final-ada45017-719b-4d93-a74b-f69149744fc3.png shows the selected MS Teams sample view and normal Export CSV control. SHA-256-verified criterion-12-export.csv and criterion-12-response.json independently reconcile all 457 rows to selected test 132124168 across timestamp, technology, site/cell, signal, RSRQ/SNR including empty/null pairs, rates and sizes. Rates match bytes/s × 8/1000 to Kbps; sizes match bytes/1024 to response kB. Private data is retained locally. Evidence: E35	Passed

Criterion 12 evidence: When the user exports a selected test as CSV, the exported CSV contains data for that selected test.

13.0.0	When a zero-duration result is selected, its details dialog does not display stale or misleading data.	When a zero-duration result is selected, its details dialog does not display stale or misleading data.	criterion-13-supplement-final-26f79388-68a3-43b0-8e5b-fbe4d29157f0.png shows a complete bounded two-row MS Teams cluster with both Call Duration values 120 s. No genuine zero-duration record was supplied or located in that checked scope, so the qualifying selection and stale-data comparison cannot be completed. This is a fixture blocker, not dataset-wide absence or a product defect. Evidence: E36	Blocked
Criterion 13 assessment: Testing notes: Captured the bounded fixture search. No qualifying zero-duration identity was supplied or located in this checked scope; did not claim a product failure or a zero-duration pass.				

Criterion 13 evidence: When a zero-duration result is selected, its details dialog does not display stale or misleading data.

14.0.0	When details for a selected result fail to load, the dialog does not display stale or misleading data.	When details for a selected result fail to load, the dialog does not display stale or misleading data.	The recorded check satisfied the criterion; see the assessment below. Evidence: E37, E38, E39	Passed

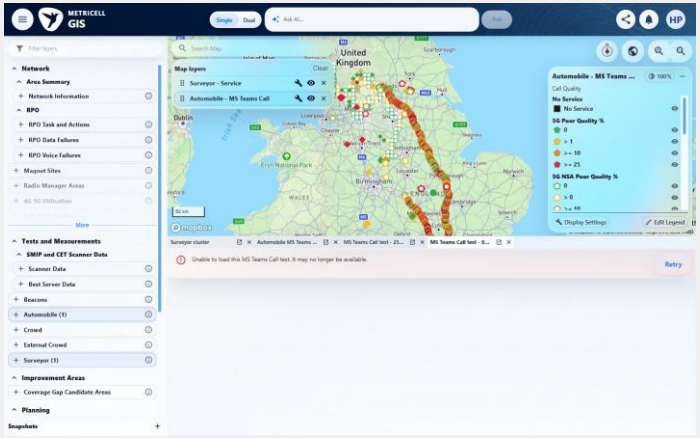

Criterion 14 assessment: SIMULATED UI STATE: on configured development https://o2intelligence-v4-dev.metricell.com/gis, recorded browser-only exact-URL GET interception injected HTTP 503 for /api/platform/automobile/ms-teams-call/tests/131879769 after genuine record 132124168 loaded. Failure-status provenance is RFC 9110 section 15.6.4; the synthetic non-success JSON makes no project error-schema claim. criterion-14-supplement-before-385e41bf-2bbe-484a-abab-93892b5a257e.png, criterion-14-supplement-final-3830d827-7d85-499f-9fb8-7df1ed351058.png, criterion-14-supplement-restored-672b6bc0-3229-473e-831d-a45622987a71.png show the populated 25 August 11:33:08 baseline, explicit MS Teams load error and Retry with no stale summary/charts/samples, and recovery to the distinct 4 August 11:41:02 record. Steps record one intercepted request, exact handler removal, genuine HTTP 200 on Retry with 455 samples, verification the handler was absent, removal of owned tabs/layer and restoration of the pre-existing Surveyor session/camera. This error-only criterion needs no loading transition or project-specific body contract. Visible client failed-load handling and recovery pass; this does not prove a naturally occurring backend incident or backend integration.

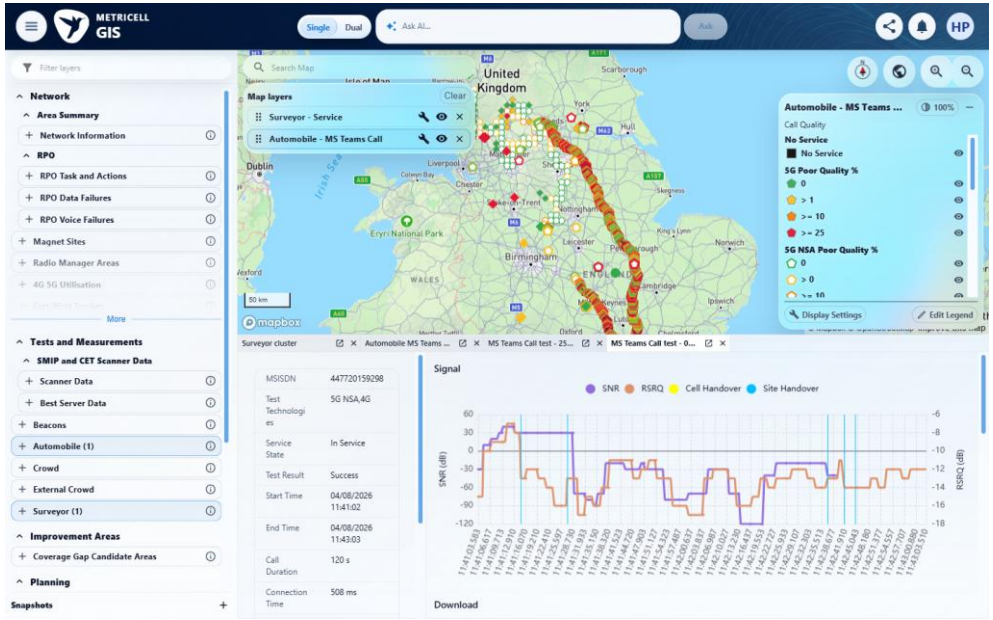

Criterion 14 evidence: When details for a selected result fail to load, the dialog does not display stale or misleading data.
