2 Test Cycle Information

Tester:	**Automated**
Jira Ticket:	TEST2-90
Environment:	o2intelligence-v4-dev.metricell.com
Browser Details:	Google Chrome 156.0.8078.48
Date of Test:	03/11/2026
Limitations during Testing:	Blocked criterion(s): 5. See the assessment below each criterion. Unverified criterion(s): 3, 6, 7, 8, 11, 13, 14, 16, 17, 21. See the assessment below each criterion. Criteria 21 used simulated UI conditions; see their assessments. Inconclusive evidence is reported as Failed, but is not a confirmed application defect.
Overall review outcome:	Blocked
Browser URL(s) recorded after criteria:	https://o2intelligence-v4-dev.metricell.com/gis

3 Test Summary

Area of test	Pass (Y/N)	Fail (Y/N)	Blocked (Y/N)	Defect No
1. With Automobile Call results available, selecting the Call layer displays the results as selectable map points.	Y	N	N	0
2. The shared Colour By selector offers CSR, Downlink MOS, Uplink MOS, and Estimated MOS, with CSR selected by default.	Y	N	N	0
3. For each Colour By choice, visible Call markers use that metric's values and the legend shows its matching title, units, categories, and colours; CSR is shown as a percentage and MOS as dimensionless scores.	N	Y	N	0
4. Changing Colour By preserves the current date, filters, group visibility, marker identities, and selected result.	Y	N	N	0
5. For a marker representing multiple calls, CSR is 100 × successful calls divided by successful, setup-failed, operator-answered, no-service, and invalid calls; dropped calls are excluded and a zero denominator produces zero. Each MOS value is weighted by that metric's own valid sample count, and Estimated MOS uses its dedicated values rather than an average of Downlink and Uplink MOS.	N	N	Y	0
6. The default CSR legend uses green #31AA4F for 95–100%, light green #86BE42 for 90–<95%, yellow #FCBF1A for 85–<90%, red #E61733 for 80–<85%, and dark red #AE1A32 for 0–<80%; exact boundaries use the higher band.	N	Y	N	0
7. Each default MOS legend uses dark red #AE1A32 for 1–<2, yellow #FCBF1A for 2–<3, light green #86BE42 for 3–<4, and green #31AA4F for 4–5 inclusive; exact internal boundaries use the higher band.	N	Y	N	0
8. When the selected MOS metric has no valid samples, it is unavailable rather than shown as zero or replaced by another metric; values outside its bands use the white, initially hidden Out of Threshold category, with no separate Not Tested category.	N	Y	N	0
9. The CSR legend shows 2G circles, 3G triangles, 4G diamonds, 5G SA pentagons, and a fixed black-square No Service category for generation 0; No Service is separate from CSR percentage bands.	Y	N	N	0
10. The MOS legends use squares for Downlink MOS, circles for Uplink MOS, and hexagons for Estimated MOS, grouping by the selected metric.	Y	N	N	0
11. Each Call legend includes a fixed white-square Out of Threshold category hidden by default; bands are ordered descending, with CSR limits 0–100 and MOS limits 1–5, and displayed labels match the boundary behaviour.	N	Y	N	0
12. Editing a metric's customisable bands, labels, marker size, or category visibility updates its Call markers and remains specific to that metric and layer instance when Colour By changes; No Service and Out of Threshold definitions cannot be edited.	N	Y	N	1
13. Restoring a Call layer or saved GIS view restores its Colour By choice and associated legend settings; a saved configuration without a choice opens with CSR selected.	N	Y	N	0

Metricell Limited © 2026 – Refer to Title Page
Commercial in Confidence

Area of test	Pass (Y/N)	Fail (Y/N)	Blocked (Y/N)	Defect No
14. Selecting a Call marker opens its Call detail tab directly when it represents one result, or opens a cluster results tab when it represents multiple results, following the HTTP and Download GIS workflow and existing group-based visibility.	N	Y	N	0
15. The cluster results table displays MSISDN, Test Result, Start Time, End Time, Test Duration, Call Setup Time, Connection Time, Disconnection Cause Code, LTE Return Time, CSFB Time, MOS Downlink, MOS Uplink, Estimated MOS, Band, Test Technologies, Call End Service, and Call End Serving Cell.	Y	N	N	0
16. Each available column in the cluster results table can be sorted.	N	Y	N	0
17. Selecting a cluster row opens a separate Call detail tab for that row's exact PointID and keeps the cluster tab open; reopening or restoring Call and Service tabs retains the relevant time and filter scope.	N	Y	N	0
18. When a selected result has related service information, its Service Details tab can be opened.	Y	N	N	0
19. Call technology legends and filters include 2G, 3G, 4G, 5G NSA, and 5G SA.	Y	N	N	0
20. Requesting details for a selected result with no duration displays a clear no-data message.	Y	N	N	0
21. When point or service details cannot be returned, the selected item does not show stale detail data.	N	Y	N	0

4 Test Cases

Each test maps to a criterion and decisive browser evidence. Inconclusive results are reported as Failed.

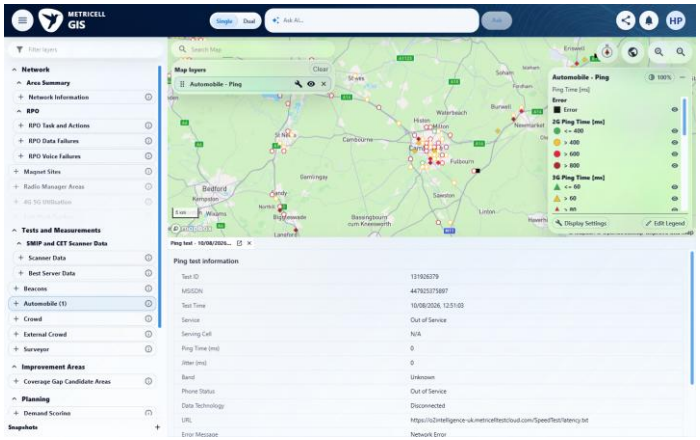

4.1 Tests

Preconditions:	V4 access and ticket conditions.	***Associated Requirements:***	Ticket criteria below.	Automation Notes:	Screenshots below each criterion; full log retained locally.

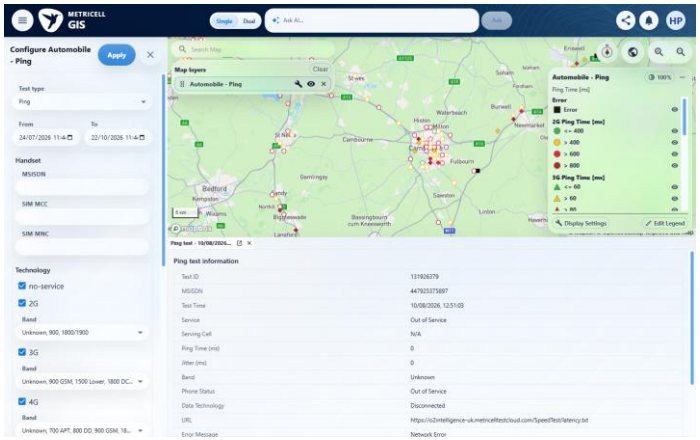

ID / Criterion	Criteria Tested	Expected Result	Actual Result / Evidence Path	Outcome
1.0.0	With Automobile Call results available, selecting the Call layer displays the results as selectable map points.	With Automobile Call results available, selecting the Call layer displays the results as selectable map points.	criterion-1-final.png shows Automobile - Call map points; criterion-1-selected-point-final.png shows a selected point opening a Call test tab. Reported requests use /api/platform/automobile/call/points and /call/cluster-details, matching the confirmed Automobile/Call scope. Evidence: E01, E02, E03, E04, E05	Passed

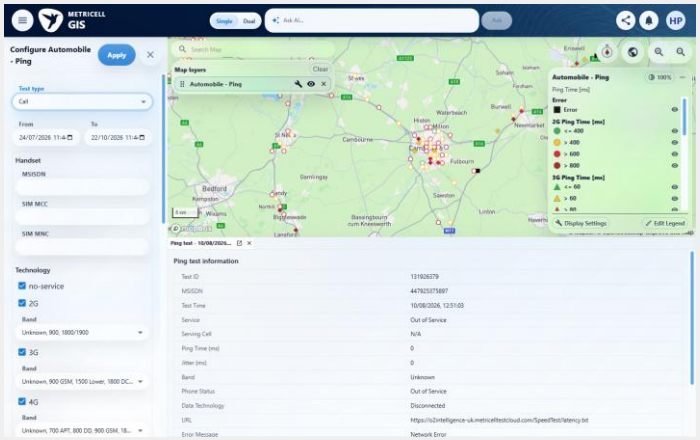

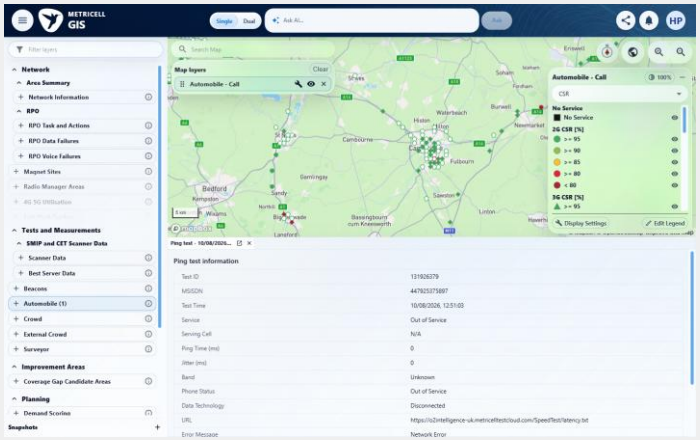

Criterion 1 evidence: With Automobile Call results available, selecting the Call layer displays the results as selectable map points.
Browser URL recorded after criterion: https://o2intelligence-v4-dev.metricell.com/gis

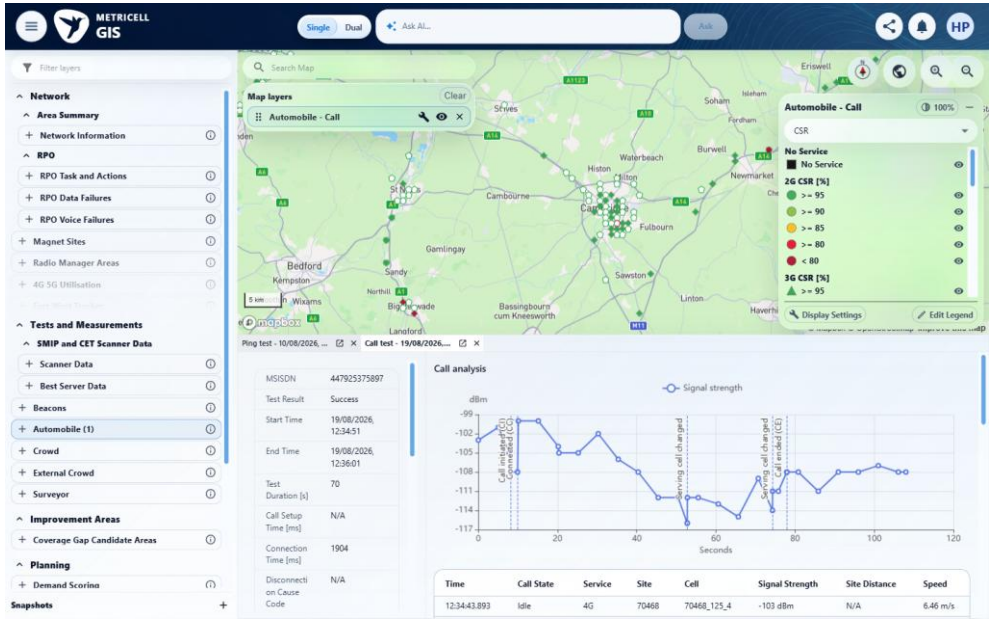

E01 - Before configuration (criterion-1-before-configuration.png)

E02 - Configuration (criterion-1-configuration.png)

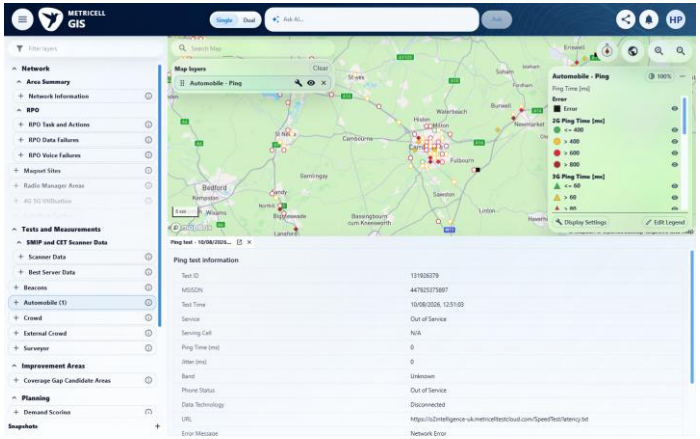

ID / Criterion	Criteria Tested	Expected Result	Actual Result / Evidence Path	Outcome
Criterion 1 continued: With Automobile Call results available, selecting the Call layer displays the results as selectable map points. **Browser URL recorded after criterion: https://o2intelligence-v4-dev.metricell.com/gis** **E03 - Before apply call (criterion-1-before-apply-call.png)**  **E04 - Final (criterion-1-final.png)** 				

ID / Criterion	Criteria Tested	Expected Result	Actual Result / Evidence Path	Outcome
Criterion 1 continued: With Automobile Call results available, selecting the Call layer displays the results as selectable map points. **Browser URL recorded after criterion: https://o2intelligence-v4-dev.metricell.com/gis** **E05 - Selected point final (criterion-1-selected-point-final.png)** 				

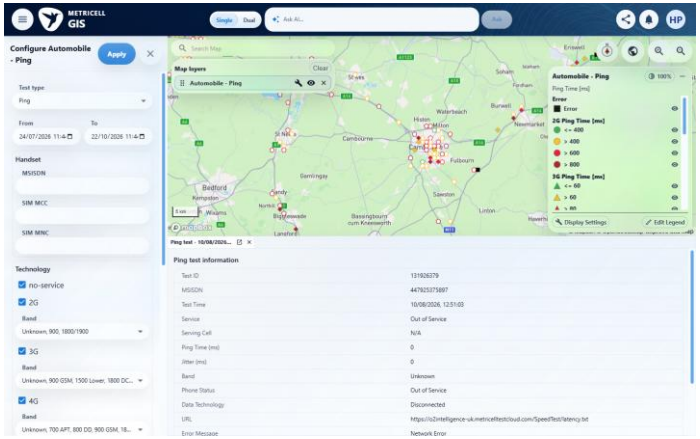

ID / Criterion	Criteria Tested	Expected Result	Actual Result / Evidence Path	Outcome
2.0.0	The shared Colour By selector offers CSR, Downlink MOS, Uplink MOS, and Estimated MOS, with CSR selected by default.	The shared Colour By selector offers CSR, Downlink MOS, Uplink MOS, and Estimated MOS, with CSR selected by default.	criterion-2-after-apply-call.png and criterion-2-before-colour-options.png show initial CSR; criterion-2-after-colour-options.png visibly lists CSR, Downlink MOS, Uplink MOS and Estimated MOS. Evidence: E01, E02, E06, E07, E08	Passed

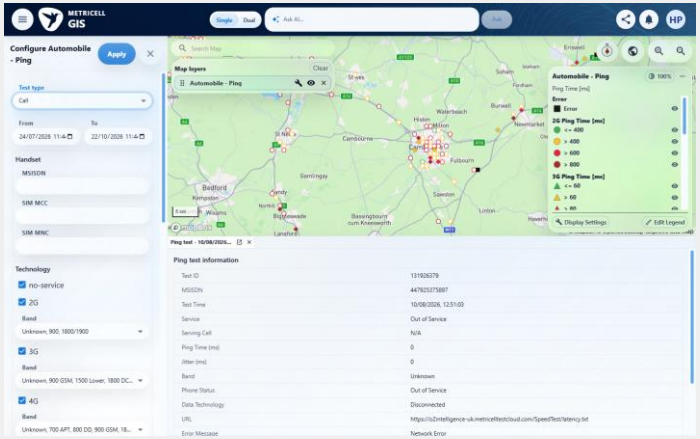

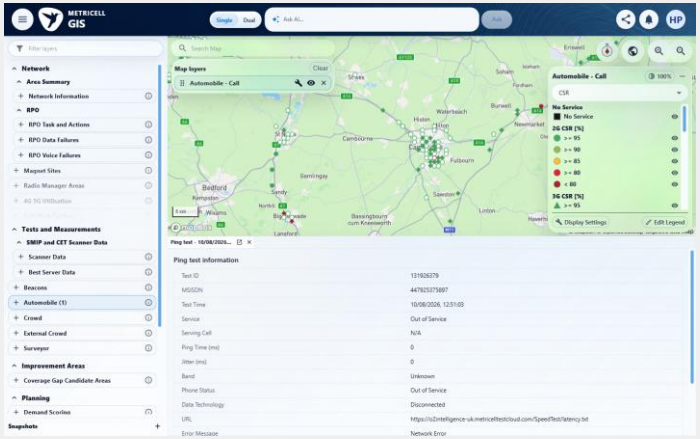

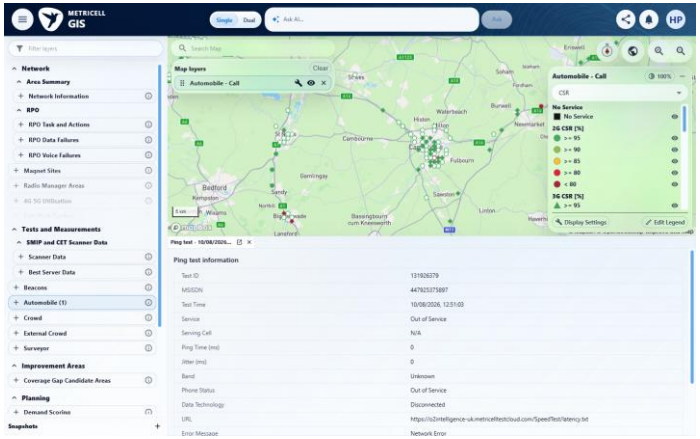

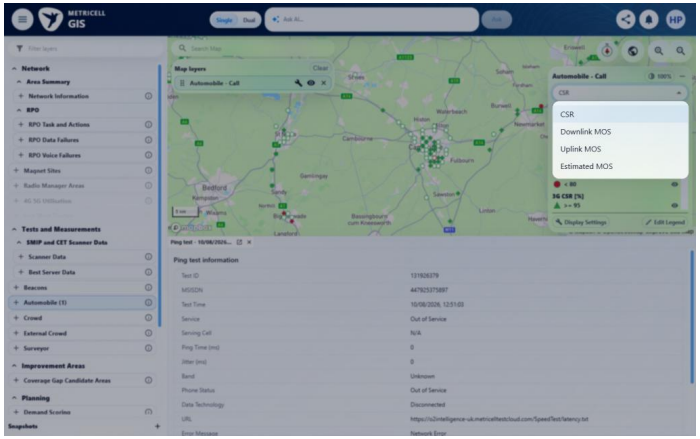

Criterion 2 evidence: The shared Colour By selector offers CSR, Downlink MOS, Uplink MOS, and Estimated MOS, with CSR selected by default.
Browser URL recorded after criterion: https://o2intelligence-v4-dev.metricell.com/gis

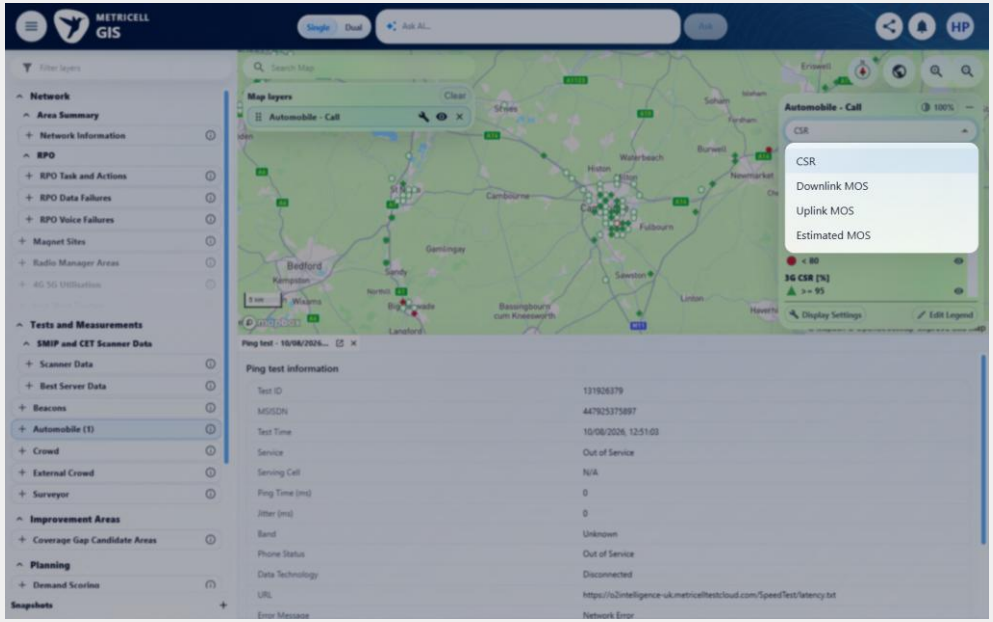

E01 - Before configuration (criterion-2-before-configuration.png)

E02 - Before call choice (criterion-2-before-call-choice.png)

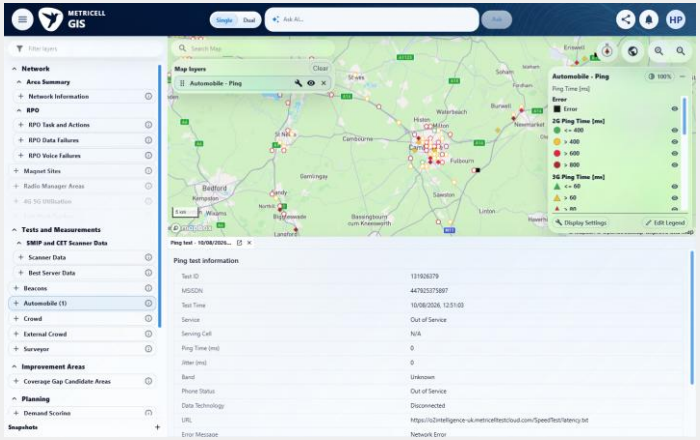

ID / Criterion	Criteria Tested	Expected Result	Actual Result / Evidence Path	Outcome
Criterion 2 continued: The shared Colour By selector offers CSR, Downlink MOS, Uplink MOS, and Estimated MOS, with CSR selected by default. **Browser URL recorded after criterion: https://o2intelligence-v4-dev.metricell.com/gis** **E06 - Before apply call (criterion-2-before-apply-call.png)**  **E07 - After apply call (criterion-2-after-apply-call.png)**

ID / Criterion	Criteria Tested	Expected Result	Actual Result / Evidence Path	Outcome
4.0.0	Changing Colour By preserves the current date, filters, group visibility, marker identities, and selected result.	Changing Colour By preserves the current date, filters, group visibility, marker identities, and selected result.	Focused follow-up, 3 November 2026: CSR → Downlink MOS → Uplink MOS → Estimated MOS → CSR retained Call PointID 132668390. Settled before/after comparisons match all 33 controls and both date fields, including site 508424 and all technology choices. The one-aggregate scoped point set and CSR category visibility were unchanged. This checks preservation of the existing authorised set, not a multi-account permissions audit. Evidence: E16, E17, E18, E19, E20, E21	Passed

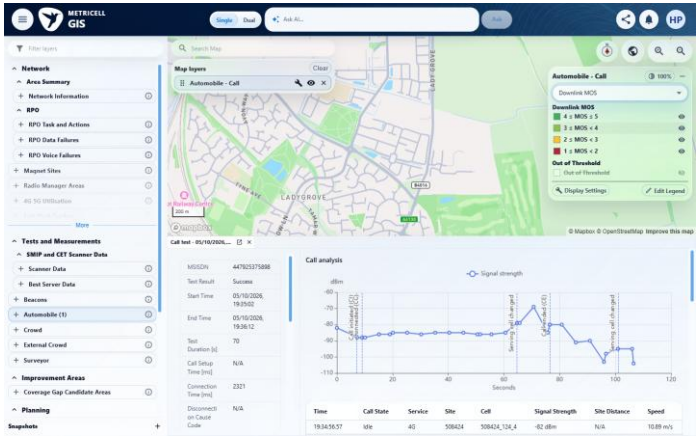

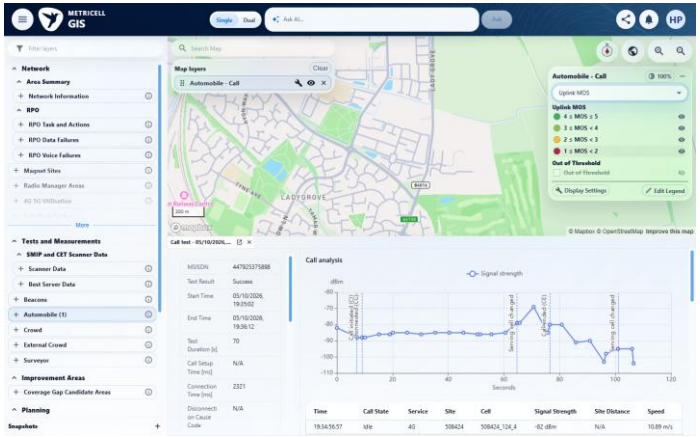

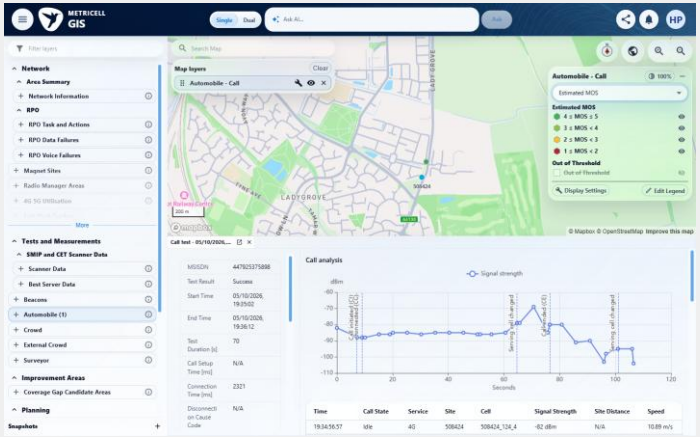

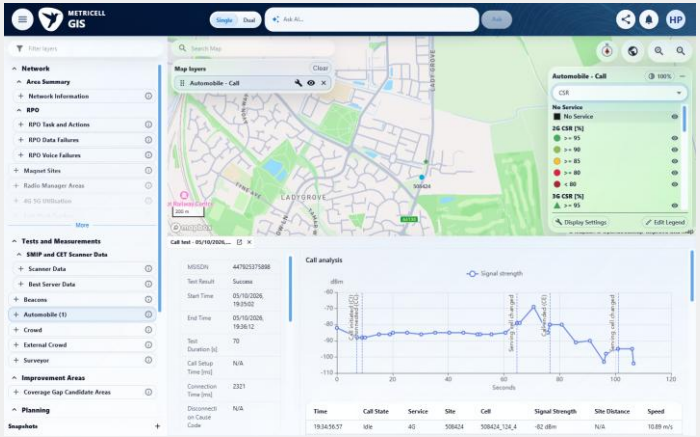

Criterion 4 evidence: Changing Colour By preserves the current date, filters, group visibility, marker identities, and selected result.
Browser URL recorded after criterion: https://o2intelligence-v4-dev.metricell.com/gis

E16 - Followup scope (criterion-4-followup-scope-9a08ddaf-4a8c-456d-9b96-952dc6525f0e.png)

E17 - Followup baseline (criterion-4-followup-baseline-358c2f68-08ad-4a12-a614-1dcc9f1e5467.png)

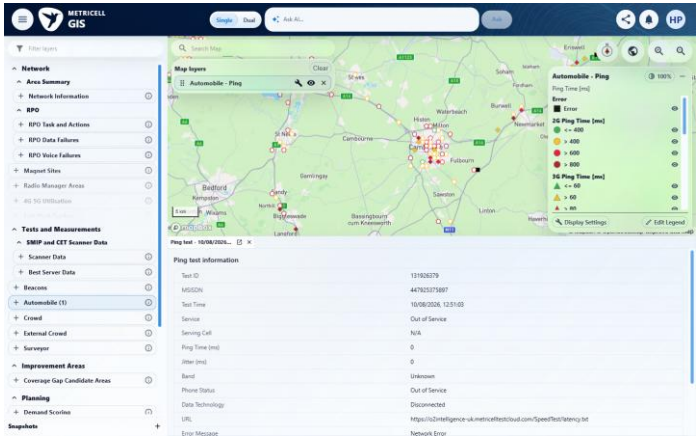

ID / Criterion	Criteria Tested	Expected Result	Actual Result / Evidence Path	Outcome

ID / Criterion	Criteria Tested	Expected Result	Actual Result / Evidence Path	Outcome
5.0.0	For a marker representing multiple calls, CSR is 100 × successful calls divided by successful, setup-failed, operator-answered, no-service, and invalid calls; dropped calls are excluded and a zero denominator produces zero. Each MOS value is weighted by that metric's own valid sample count, and Estimated MOS uses its dedicated values rather than an average of Downlink and Uplink MOS.	For a marker representing multiple calls, CSR is 100 × successful calls divided by successful, setup-failed, operator-answered, no-service, and invalid calls; dropped calls are excluded and a zero denominator produces zero. Each MOS value is weighted by that metric's own valid sample count, and Estimated MOS uses its dedicated values rather than an average of Downlink and Uplink MOS.	The selected aggregate in criterion-5-after-aggregate-selection.png resolves to one Call result. Reported genuine responses lack the component call counts and separate MOS sample counts needed for independent CSR/weighted-MOS verification; known multi-call and zero-denominator fixtures are unavailable. Evidence: E01, E22, E23, E24, E04, E07, E25, E05	Blocked
Criterion 5 assessment: Testing notes: Calculation prerequisites are missing: observed HTTP 200 Call point/cluster responses do not expose counts for successful, setup-failed, operator-answered, no-service, invalid and dropped calls or separate valid sample counts for every MOS metric. The selected aggregate resolved to single PointID 132047844, with Downlink/Uplink MOS null and Estimated MOS 4.4. A known multi-call denominator/weighting fixture and zero-denominator fixture are required.				

Criterion 5 evidence: For a marker representing multiple calls, CSR is 100 × successful calls divided by successful, setup-failed, operator-answered, no-service, and invalid calls; dropped calls are excluded and a zero denominator produces zero. Each MOS value is weighted by that metric's own valid sample count, and Estimated MOS uses its dedicated values rather than an average of Downlink and Uplink MOS.

ID / Criterion	Criteria Tested	Expected Result	Actual Result / Evidence Path	Outcome
8.0.0	When the selected MOS metric has no valid samples, it is unavailable rather than shown as zero or replaced by another metric; values outside its bands use the white, initially hidden Out of Threshold category, with no separate Not Tested category.	When the selected MOS metric has no valid samples, it is unavailable rather than shown as zero or replaced by another metric; values outside its bands use the white, initially hidden Out of Threshold category, with no separate Not Tested category.	criterion-8-missing-mos-details.png shows Downlink/Uplink N/A and Estimated MOS 4.4. The owned after-record-downlink.png, after-show-unavailable.png and after-restore-hidden.png sequence shows hidden/unhidden white markers without a Not Tested category; a known valid out-of-band MOS sample is absent, so that branch remains unverified. Evidence: E01, E09, E02, E03, E29, E10, E11, E40, E25, E41, E42, E43, E44, E45, E46	Failed

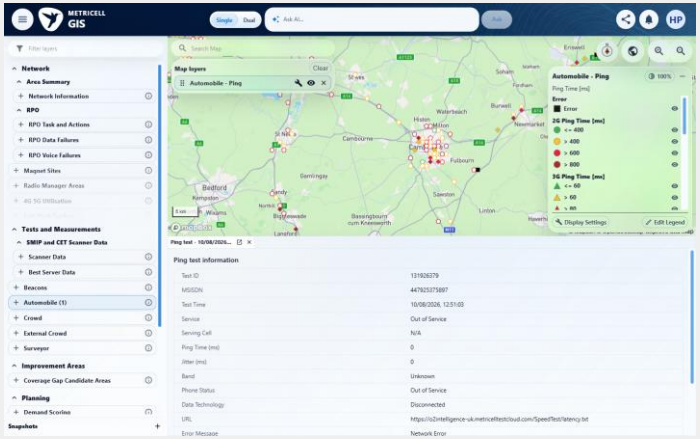

Criterion 8 assessment: Testing notes: Selected Call record shows MOS Downlink and MOS Uplink N/A while Estimated MOS is 4.4. Downlink colouring hides the unavailable markers instead of displaying substituted values. Out of Threshold is white and initially hidden, and no Not Tested category appears. A known valid out-of-range MOS fixture was unavailable to verify that branch. Switched to Downlink; a click in its hidden-marker state opened no detail and the wait timed out.

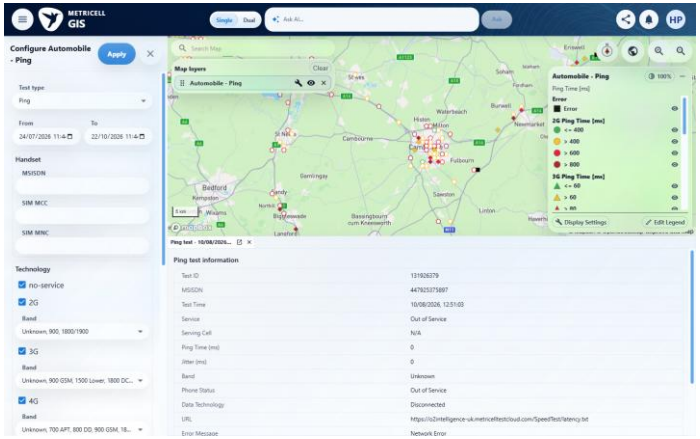

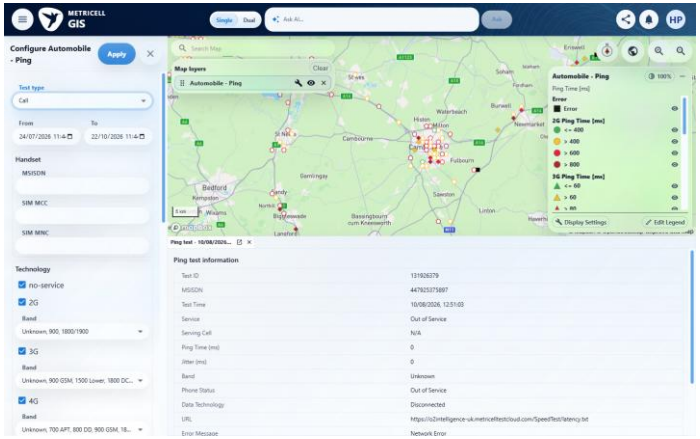

Criterion 8 evidence: When the selected MOS metric has no valid samples, it is unavailable rather than shown as zero or replaced by another metric; values outside its bands use the white, initially hidden Out of Threshold category, with no separate Not Tested category.

16.0.0	Each available column in the cluster results table can be sorted.	Each available column in the cluster results table can be sorted.	criterion-16-before-sort-2.png through before-sort-17.png provide later settled ascending indicators for columns 1–16; many after-sort captures reset the horizontal viewport and cannot prove off-screen indicators. after-time-ascending.png and after-time-descending.png prove actual Start Time reversal. No later capture exposes the settled sort indicator/order for column 17, Call End Serving Cell, so all-column sorting is not fully evidenced; equal/N/A samples do not establish varied-value ordering. Evidence: E77, E01, E02, E61, E06, E29, E04, E73, E78, E79, E80, E81, E82, E83, E84, E85, E86, E87, E88, E89, E90, E91, E92, E93, E94, E95, E96, E97, E98, E99, E100, E101, E102, E103, E104, E105, E106	Failed

17.0.0	Selecting a cluster row opens a separate Call detail tab for that row's exact PointID and keeps the cluster tab open; reopening or restoring Call and Service tabs retains the relevant time and filter scope.	Selecting a cluster row opens a separate Call detail tab for that row's exact PointID and keeps the cluster tab open; reopening or restoring Call and Service tabs retains the relevant time and filter scope.	Existing evidence retains the cluster and selected Call identity. The focused follow-up now proves sample-linked Service content is reachable, so the earlier serviceDetails=null prerequisite explanation is withdrawn. Full Service-tab reopening/restoration with exact time and filter scope has not been checked; this remains an evidence gap, not a demonstrated product defect. Evidence: E107, E02, E108, E109, E04, E73, E110, E111, E112	Failed

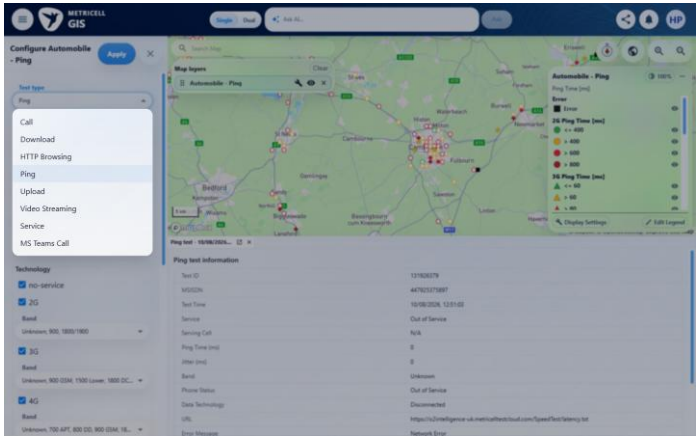

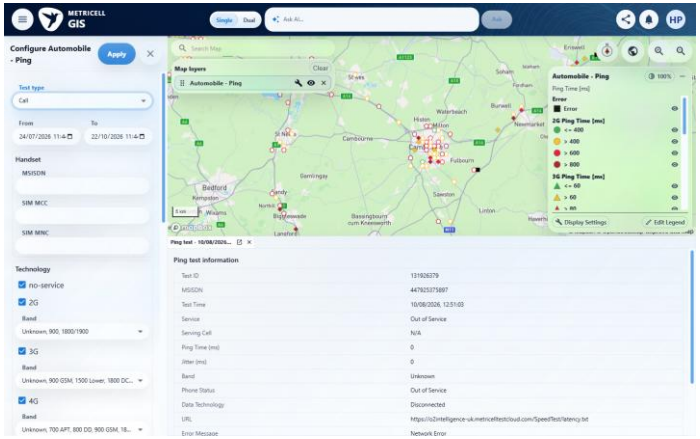

Criterion 17 evidence: Selecting a cluster row opens a separate Call detail tab for that row's exact PointID and keeps the cluster tab open; reopening or restoring Call and Service tabs retains the relevant time and filter scope.

18.0.0	When a selected result has related service information, its Service Details tab can be opened.	When a selected result has related service information, its Service Details tab can be opened.	Selecting the genuine Call sample at 5 October 2026, 19:35:03.77 opened a separate tab containing Service state, service/data technology, coordinates and radio/site/cell fields. The genuine test-analysis request ties that content to parent PointID 132668390 and the selected sample time. The tab caption is Call detail, not Service Details; functional related Service content is verified. A null parent serviceDetails field did not mean that the sample-linked route was unavailable. Evidence: E113, E114	Passed

Criterion 18 evidence: When a selected result has related service information, its Service Details tab can be opened.
Browser URL recorded after criterion: https://o2intelligence-v4-dev.metricell.com/gis

metricell
Better Connected

About Metricell

Metricell is on a mission to deliver connectivity. We work with our customers to design, deliver and manage wireless communication networks – with a shared ambition of achieving flawless network experience. We've been responsible for many first-to-market products, and our technology is characterised by the relentless pursuit of automation and digitalisation.

Our geospatial intelligence tools traverse a wide variety of business processes – from Test & Measurement to Customer Experience Management – and we're pioneers in Crowdsourcing and Digital Self Care. Our technology is today in use by a range of customers; thousands of their personnel; and millions of subscribers worldwide.
